# Academic Course Description

# BHARATH UNIVERSITY Faculty of Engineering and Technology Department of Civil Engineering

BEC601 STRUCTURAL ANALYSIS – II Sixth Semester, 2016-17 (Even Semester)

## **Course (catalog) description**

To introduce the students to basic theory and concepts of structural analysis and methods for the analysis of structures.

| <b>Compulsory/Elective course</b> | : | Compulsory for Civil students |
|-----------------------------------|---|-------------------------------|
|-----------------------------------|---|-------------------------------|

:

Credit / Contact hours : 4 credits / 60 hours

Course Coordinator : Ms. M.V. Shruthi, Assistant Professor

### Instructors

| Name of the<br>instructor | Class<br>handling | Office<br>location | Office phone | Email (domain:@<br>bharathuniv.ac.in | Consultation    |
|---------------------------|-------------------|--------------------|--------------|--------------------------------------|-----------------|
| K.Sathishkumar            | III YEAR C& D     | Civil block        |              |                                      | 9.00 - 9.50 AM  |
| Bhunashwari               | III YEAR A & B    | Civil block        |              |                                      | 12.45 - 1.15 PM |

## **Relationship to other courses:**

| Pre –requisites   | : | STRUCTURAL ANALYSIS – I                   |
|-------------------|---|---|
| Assumed knowledge | : | Basic knowledge in analysis of structures |
| Following courses | : | BEC 703 design of steel structures        |

### Syllabus Contents

### UNIT I ILD FOR INDETERMINATE STRUCTURES

Influence line for statically indeterminate structures – Maxwell Betti theorem - Muller – Breslau Principle and its application to determine the influence lines of reactions. SF and BM at a section of continuous beams – qualitative influence lines for horizontal thrust reaction and moments for continuous beams, portal and arches.

### UNIT II ARCHES & CABLES

Arches and suspension Cables : Three hinged and two hinged arches-parabolic and circular arches – influence lines for three and two hinged arches for horizontal thrust, SF and BM at any section - length of cable, maximum tension - types supports – forces in towers.

### UNIT III PLASTIC THEORY

Plastic Theory: Plastic moment of resistance - plastic modulus - shape factor - plastic hinges - determination of collapse load for continuous beams and portals.

### UNIT IV STIFFNESS METHOD

Matrix Method of Structural Analysis: Stiffness methods-development of stiffness method -stiffness matrix for continuous beams and portals application to simple pin jointed trusses, continuous beams, portal frames.

#### UNIT V FLEXIBILITY METHOD

Matrix method of Structural Analysis: Flexibility method – statically determinate and indeterminate (up to 2 degrees only) structures- formation of flexibility matrix - simple problems on Continuous beams, Portal frame.

## **TEXT BOOKS:**

1. S.S.Bhavikati. Structural Analysis Vol.-I & II. Vikas Publishing House pvt ltd, 2009 **REFERENCE:** 

- 1. William Weaver, Computer Programs for structural Analysis, VNR Publishers, 2006
- 2. Rubinstein M.F, Matrix Computer Analysis of Structures, Prentice Hall, Englewood cliffs, 1990
- 3. Arya AS. and Jain." Theory and Analysis of Structures", Nem Chand & Bros, Dec 1992
- 4. Pandit G S and Gupta S P,"Matrix methods in structural analysis", Tata McGraw Hill Publishing Company Limited, 2007

# Computer usage: software strap, staad pro

# **Professional component**

| General                               | - | 0%   |
|---------------------------------------|---|------|
| Basic Sciences                        | - | 0%   |
| Engineering sciences & Technical arts | - | 0%   |
| Professional subject                  | - | 100% |

# Broad area : structural analysis

# **Test Schedule**

| S. No. | Test         | Tentative Date                | Portions             | Duration  |
|--------|--------------|-------------------------------|----------------------|-----------|
| 1      | Cycle Test-1 | February 1 <sup>st</sup> week | Session 1 to 14      | 2 Periods |
| 2      | Cycle Test-2 | March 2 <sup>nd</sup> week    | Session 15 to 28     | 2 Periods |
| 3      | Model Test   | April 2 <sup>nd</sup> week    | Session 1 to 45      | 3 Hrs     |
| 4      | University   | ТВА                           | All sessions / Units | 3 Hrs.    |
| 4      | Examination  |                               |                      |           |

# Mapping of Instructional Objectives with Program Outcome

|  | Correlates to program outcome |   | utcome |
|--|-------------------------------|---|--------|
|  | Н                             | Μ | L      |
| CO1 Analyze Space Truss using tension Coefficient method                 | d                             | с |        |
| CO2 Analyze cable suspension bridges                                     | d                             | с |        |
| CO3 Perform plastic analysis of indeterminate beams and frames           | d                             | с |        |
| CO4 Analyze structures by using matrix flexibility and stiffness methods | d                             | с |        |
| CO5 Implement basic concepts of finite element analysis                  | d                             | С |        |

| S.NO      | Topics   | Problem solving<br>(Yes/No) | Text / Chapter |
|-----------|--|-----------------------------|----------------|
| UNIT I IL | D FOR INDETERMINATE STRUCTURES   | I                           |                |
| 1.        | Influence line for statically indeterminate  | No                          |                |
|           | structures –   |                             |                |
| 2.        | Maxwell Betti theorem  | No                          |                |
| 3.        | Muller – Breslau Principle   | yes                         |                |
| 4.        | Application to determine the influence lines of reactions.                                     | yes                         | [ T1,R1 & R3]  |
| 5.        | Problems on Muller – Breslau Principle   | yes                         |                |
| 6.        | SF and BM at a section of continuous beams   | yes                         | -              |
| 7.        | qualitative influence lines for horizontal thrust<br>reaction and moments for continuous beams | yes                         |                |
| 8.        | Problems on continuous beams   | Yes                         |                |
| 9.        | qualitative influence lines for portal frames  | Yes                         | 1              |
| 10.       | Problems on portal frames  | Yes                         | 1              |
| 11.       | qualitative influence lines for arches   | Yes                         | 1              |
| 12.       | Problems on arches   | yes                         |                |
| 13        | Introduction to Arches and suspension Cables   | No                          |                |
| 14        | Three hinged and two hinged arches   | yes                         | -              |
| 15        | Problems on Three hinged arches  | Yes                         | -              |
| 16        | Problems on Two hinged arches  | Yes                         | -              |
| 17        | Introduction to parabolic and circular arches  | Yes                         | [ T1,R1 & R3]  |
| 18        | Problems on parabolic arches   | Yes                         | -              |
| 19        | Problems on circular arches  | yes                         |                |
| 20        | Influence lines for three hinged arches for  | Yes                         | -              |
| 20        | horizontal thrust, SF and BM at any section  | 105                         |                |
| 21        | Influence lines for two hinged arches for  | Yes                         | -              |
|           | horizontal thrust, SF and BM at any section  |                             |                |
| 22        | length of cable, maximum tension in cable  | Yes                         | -              |
| 23        | Problems on cables   | Yes                         |                |
| 24        | Types of supports – forces in towers.  | no                          |                |
| 25        | Introduction to Plastic Theory   | No                          |                |
| 25        | Plastic moment of resistance   | No                          | -              |
| 20        | Plastic modulus  | No                          | -              |
| 28        | shape factor for rectangular section   | No                          |                |
| 28        | Shape factor for circular, I sections  | No                          | [ T1,R1 & R3]  |
| 30        | plastic hinges   | no                          | -              |
| 30        | Introduction to collapse loads   | no                          |                |
| 32        | collapse loads mechanism   | No                          | -              |
| 33        | Problems on collapse loads   | Yes                         | -              |
| 33        | determination of collapse load for continuous  | Yes                         | -              |
|           | beams  |                             |                |
| 35        | determination of collapse load for frames  | Yes                         |                |
| 36        | determination of collapse load for truss   | Yes                         |                |
| 37        | Introduction to Matrix Method Page <b>3</b> of <b>6</b>  | No                          |                |
| 38        | Introduction to Structural Analysis Stiffness  | No                          |                |

|    | methods  |     |               |  |
|----|--|-----|---------------|--|
| 39 | Analysis steps of Stiffness matrix methods       | No  |               |  |
| 40 | development of stiffness method No               |     |               |  |
| 41 | development of equilibrium equations             | No  | [ T1,R2 & R4] |  |
| 42 | stiffness matrix for continuous beams            | Yes |               |  |

|    |  |     | 1             |  |
| 49 | Introduction to Matrix method                    | No  |               |  |
| 50 | Introduction to Structural Analysis: Flexibility | No  |               |  |
|    | method   |     |               |  |
| 51 | Analysis steps of Flexibility method             | No  | [ T1,R2 & R4] |  |
| 52 | development of Flexibility method                |     |               |  |
| 53 | statically determinate structures                | No  |               |  |
| 54 | statically indeterminate structures              | No  |               |  |
| 55 | Flexibility matrix for continuous beams          | No  |               |  |
| 56 | Problems on continuous beams                     | yes |               |  |
| 57 | Flexibility matrix for portal frames             | No  |               |  |
| 58 | Problems on portal frames                        | Yes |               |  |
| 59 | Flexibility matrix for trusses                   | No  |               |  |
| 60 | Problems on trusses                              | yes |               |  |

# **Teaching Strategies**

The teaching in this course aims at establishing a good fundamental understanding of the areas covered using:

- Formal face-to-face lectures
- Tutorials, which allow for exercises in problem solving and allow time for students to resolve problems in understanding of lecture material.
- Laboratory sessions, which support the formal lecture material and also provide the student with practical construction, measurement and debugging skills.
- Small periodic quizzes, to enable you to assess your understanding of the concepts.

### **Evaluation Strategies**

| Cycle Test – I  | - | 5%  |
|-----------------|---|-----|
| Cycle Test – II | - | 5%  |
| Model Test      | - | 5%  |
| Attendance      | - | 10% |
| Assignment      | - | 5%  |
| Final exam      | - | 70% |
|                 |   |     |

### Addendum

### ABET Outcomes expected of graduates of B.Tech / Civil / program by the time that they graduate:

- a. An ability to apply knowledge of mathematics, science, and engineering
- b. An ability to design and conduct experiments, as well as to analyze and interpret data
- c. An ability to design a hardware and software system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- d. An ability to function on multidisciplinary teams
- e. An ability to identify, formulate, and solve engineering problems
- f. An understanding of professional and ethical responsibility
- g. An ability to communicate effectively
- h. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context
- i. A recognition of the need for, and an ability to engage in life-long learning
- j. A knowledge of contemporary issues
- k. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

### Program Educational Objectives

### **PEO1: PREPARATION**

Civil Engineering graduates will have knowledge to apply the fundamental principles for a successful profession and/or for higher education in Civil Engineering based on mathematical, scientific and engineering principles, to solve realistic and field problems that arise in engineering and non engineering sectors

### PEO2: CORE COMPETENCE

Civil Engineering graduates will adapt to the modern engineering tools and construction methods for planning, design, execution and maintenance of works with sustainable development in their profession.

### PEO3: PROFESSIONALISM

Civil Engineering Graduates will exhibit professionalism, ethical attitude, communication and managerial skills, successful team work in various private and government organizations both at the national and international level in their profession and adapt to current trends with lifelong learning.

### PEO4: SKILL

Civil Engineering graduates will be trained for developing soft skills such as proficiency in many languages, technical communication, verbal, logical, analytical, comprehension, team building, inter personal relationship, group discussion and leadership skill to become a better professional.

#### PEO5: ETHICS

Civil Engineering graduates will be installed with ethical feeling, encouraged to make decisions that are safe and environmentally-responsible and also innovative for societal improvement.
