

Bharath
INSTITUTE OF HIGHER EDUCATION AND RESEARCH
(Declared as Deemed-to-be University under section 3 of UGC Act, 1956)
(Vide Notification No. F.9-5/2000 - U.3, Ministry of Human Resource Development, Govt. of India, dated 4th July 2002)

B.Tech Information Technology

(Four Years)
(Choice Based Credit System)

CURRICULUM AND SYLLABUS- 2018

DEPARTMENT OF INFORMATION TECHNOLOGY
SCHOOL OF COMPUTING
BHARATH INSTITUTE OF SCIENCE AND TECHNOLOGY
CHENNAI-600 073, TAMIL NADU
DEPARTMENT OF INFORMATION TECHNOLOGY

B.Tech – INFORMATION TECHNOLOGY

DEPARTMENT VISION

To produce competent IT professionals who are technically sound and ethically strong for the industries, community and research organizations at the national and global levels through excellence in teaching, research and consultancy

DEPARTMENT MISSION

Information Technology Department shall strive to be excellence

MS1:By developing the students, strong in engineering fundamentals, proficient in technical skills, strong in ethical values and knowledge able in applying the skills for the welfare of the society through competent faculty.

MS2:By providing state of the art facilities in which higher studies and research flourish amongst the students.

MS3: By enhancing the collaborative partnership between Industry, R&D organization to promote research among faculty, students and also preparing the student to be an entrepreneur.

MS4:By bringing out the aggregate identity and accentuating moral esteems of students

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

PEO1: PREPARATION:

To provide strong foundation in mathematical, scientific and engineering fundamentals necessary to analyze, formulate and solve hardware / software engineering problems.

PEO2: CORE COMPETENCE:

To enhance the skills and experience in defining problems in the core areas of Information Technology and related engineering so as to analyze, design, and synthesize data

PEO3: PROFESSIONALISM:

To enhance their skills and embrace new thrust areas through self-directed professional development and post-graduate training or education.

PEO4: SKILL:

To provide Industry based training for developing professional skills and soft skills such as proficiency in languages, technical communication, verbal, logical, analytical, comprehension, team building, inter personal relationship, group discussion and leadership skill to become a better professional.

PEO5: ETHICS:

Apply the ethical and social aspects of modern Engineering and Technology innovations to the design, development, and usage of new products, machines, gadgets, devices, etc.

Mapping between PEOs Vs Mission:

PEO	DEPARTMENT MISSION			
	MS1	MS2	MS3	MS4
PEO1	3	2	2	2
PEO2	3	1	3	3
PEO3	2	3	3	2
PEO4	3	2	3	3
PEO5.	2	3	1	2

(Degree of Mapping High=3, Medium=2, Low=1)

PROGRAMME OUTCOMES (POs)

On completion of B.Tech in Information Technology Programme the graduate will have to

- a) Engineering Knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- b) Problem Analysis:** Identify, formulate, review research literature, and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.
- c) Design/Development of Solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- d) Conduct Investigations of Complex Problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions for complex problems.
- e) Modern Tool Usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- f) The Engineer and Society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice
- g) Environment and Sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for, sustainable development
- h) Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

- i) **Individual and Team Work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- j) **Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions
- k) **Project Management and Finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- l) **Life-long Learning:** Recognize the need for, and have the preparation and ability to engage in independent and lifelong learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES (PSOs)

PSO1: To identify, analyze and develop software systems using appropriate techniques and concepts related to user experience, predictive analysis and health care information systems through Information Technology.

PSO2: To design an algorithm or process within realistic constraints to meet the desired needs through analytical, logical and problem-solving skills.

PSO3: To apply state of the art IT tools and technologies, IT infrastructure management abilities in treading innovative career path as a prospective IT engineer.

U18HSEN101	COMMUNICATIVE ENGLISH	L	T	P	C
	Total Contact Periods – 60	2	0	2	3
	Prerequisite – School English				
	Dept Designed by:Department of English				
OBJECTIVES	To gain fundamental knowledge of language and the uses in daily life.				

UNIT I SPEAKING 6 hours

Speaking- Pronunciation, Intonation, Stress and Rhythm -Common Everyday Situations: Conversations and Dialogues -Communication at Workplace -Interviews -Formal Presentations -introducing one self – exchanging personal information- narrating events, - incidents , speaking about one's friend/pet -Wh- Questions- asking and answering-yes or no questions-partsofspeech.Vocabularydevelopment–prefixes-suffixes-articles,prepositions.

UNIT II READING 6 hours

Reading – comprehension (multiple choice questions, short questions) - short narratives and descriptionsfromnewspapersincludingdialoguesandconversationsalsousedasshortreading texts--andlongerpassages-understandingtextstructure-useofreferencewordsanddiscourse markers-coherence-jumbled sentences vocabulary and structures- Vocabulary Building- The concept of Word Formation

UNIT III LISTENING 6 hours

Listening – listening to longer texts and filling in the table- product description- asking about routine actions and expressing opinions. –Listening to telephonic conversations -degrees of comparison- pronouns- direct vs indirect questions- Vocabulary development – single word substitutes-adverbs-IdentifyingCommonErrorsinWriting-Subject-verbagreement-Noun-pronounagreement

UNIT IV WRITING 6 hours

Writing-letterwriting,formalandpersonalletters-afterlisteningtodialoguesorconversations and completing exercises based on them. Understanding text structure- use of reference words and discourse markers-coherence-jumbled sentences -Tenses- simple present-simple past- present continuous and past continuous- Vocabulary development- synonyms-antonyms- phrasal verbs- Articles -Prepositions.

UNIT V LANGUAGE DEVELOPMENT 6 hours

Writingshortessays–developinganoutline-identifyingmainandsubordinateideas-dialogue writing- listening to talks, conversations to complete the remaining, participating in conversations- short group conversations-Language development-modal verbs- present/ past perfect tense.– paragraph writing- topic sentence- main ideas short narrative descriptions . Synonyms, antonyms, and standard abbreviations- Basic Writing Skills- Sentence Structures- Use of phrases and clauses in sentences - Importance of proper punctuation - Creating coherence- Organizing principles of paragraphs in documents- Techniques for writing precisely.

SOFTSKILL LABORATORY

30

LIST OF EXPERIMENTS / EXERCISES

1. Groupdiscussion
2. Making effectivepresentations
3. Watching interviews&conversations
4. Reading different genres of texts

5. International English Language Testing System(IELTS)
6. Test of English as a Foreign Language(TOEFL)
7. Mockinterviews
8. Time management & stress management
9. Role play
10. Listening to lectures, discussions from TV/Radio.
11. Articulation of sounds-intonation.
12. Creative and critical thinking.

TEXT BOOKS:

1. English A Course book for Under Graduate Engineers and Technologists. Orient Black Swan Limited, Hyderabad:2015
2. Richards, C. Jack. Interchange Students' Book-2 New Delhi: CUP, 2015.

REFERENCES

COURSE OUTCOMES															
CO1	The student will be able to comprehend the text with clarity														
CO2	The capacity to read and listen will improve														
CO3	Writing technical report will be learnt properly														
CO4	Speaking skills will be acquired														
CO5	Overall communication skills will make them employable														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
COs\POs	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03

Approval	47 th Meeting of Academic Council														

	ENGINEERING MATHEMATICS – I	L	T	P	C
U18BSMA101	Total Contact Periods – 60	3	1	0	4
	Prerequisite – School Level Mathematics				
	Course Designed by – Department of Mathematics				
OBJECTIVES	➤ The objective of this course is to familiarize the prospective engineers with techniques in calculus, multivariate integration analysis and linear algebra. ➤ It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines.				

UNIT I THEORY OF EQUATIONS (9+3)Hours

Fundamental theory of algebra – number of roots of polynomial equations – conjugate pairs theorem (without proof) – Descartes rules of signs- symmetric functions of the roots – formation of equations – diminish the roots of an equations- Multiple roots – reciprocal equation.

UNIT II DIFFERENTIAL CALCULUS – One Variable (9+3)Hours

Representation of functions – limit of a function – continuity – Derivatives – Differentiation rule – Maxima and minima of functions of one variable – Rolle’s Theorem – Mean Value Theorem – Taylor’s and Maclaurin’s Theorem with remainders

UNIT III DIFFERENTIAL CALCULUS -Several Variables (9+3) Hours

Partial derivatives–Euler’s theorem on Homogeneous functions-directional derivatives–total derivative – Jacobian–Maxima and minima of two variables.

UNIT IV INTEGRAL CALCULUS -One Variables (9+3) Hours

Definite integrals – Substitution rule – Techniques of integration – Integration by parts – Trigonometric integrals – Trigonometric substitutions – Integrations of rational functions by partial fractions – Integrations of irrational functions-Beta, Gamma functions and their properties.

UNIT V MATRICES (9+3)Hours

Characteristic Equations –Eigenvalue and Eigenvectors of the real matrix– Properties– Cayley-Hamilton Theorem – Diagonalization of matrices – Reduction of quadratic form to canonical form by orthogonal transformation – Nature of Quadratic form.

TEXT BOOKS

1. Grewal B. S, Higher Engineering Mathematics, Khanna Publisher, Delhi –2014.
2. Kreyszig. E, Advanced Engineering Mathematics, 10th edition, John Wiley & Sons, Singapore, 2012.

REFERENCE BOOKS

1. Veerarajan T, Engineering Mathematics, II edition, Tata McGraw Hill Publishers, 2008.
2. Kandasamy P & co., Engineering Mathematics, 9th edition, S. Chand & co Pub., 2010.
3. N.P. Bali and Manish Goyal, A text book of Engineering Mathematics, Laxmi Publications, Reprint, 2010.
4. George B. Thomas, Jr, Maurice D. Weir, Joel Hass., Thomas’ Calculus, Twelfth Edition, Addison-Wesley, Pearson.
5. Narayanan S., Manickavachagam Pillai T. K., Ramanaiah G., Advanced Mathematics for

COURSE OUTCOMES (COs)															
CO1	To apply both the limit definition and rules of differentiation to differentiate functions. Also they will have a basic understanding of Rolle’s Theorem that is fundamental to application of analysis to Engineering problems.														
CO2	To apply definite integrals of algebraic and trigonometric functions using formulas and substitution. Also they will have a basic understanding of Beta and Gamma functions.														
CO3	To apply differential and integral calculus to notions of curvature. Also apply differentiation to find maxima and minima of functions.														
CO4	To apply multiple integrals to compute area and volume over curves, surface and domain in two dimensional and three dimensional spaces.														
CO5	Identify Eigenvalue problems from practical areas using transformations; Diagonalising the matrix would render the Eigen values.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
COs\ POs	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03

CO4	H				L				L						
CO5	M				L				M			M			
Category	Basic Science (BS)														
Approval	47 th Meeting of Academic Council														

U18BSPH101	WAVES AND OPTICS	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Higher Secondary School Physics				
	Course designed by – Department of Physics				
OBJECTIVES: To develop Physics and Engineering strategies of Waves and Optics and to discuss their functionalities in modern optoelectronics.					

UNIT1 NON-DISPERSIVE TRANSVERSE AND LONGITUDINAL WAVES IN ONEDIMENSION 9hours

Introduction - Transverse wave on a string, the wave equation on a string, Harmonic waves, reflection and transmission of waves at a boundary, standing waves, longitudinal waves and the wave equation for them, acoustics waves and speed of sound. Waves with dispersion, superposition of waves, wave groups and group velocity.

UNIT2 ULTRASONIC WAVES 9 hours

Production of ultrasonics by magnetostriction and piezoelectric methods - acoustic grating –

Detection - Non Destructive Testing – pulse echo system through transmission and reflection modes - A,B and C – scan displays, Industrial and Medical applications – Sonogram.

UNIT3 THE PROPAGATION OF LIGHT AND GEOMETRIC OPTICS 9hours

Fermat's principle of stationary time and its application e.g. in explaining mirage effect, laws of reflection and refraction, Light as an electromagnetic wave and Fresnel equations, reflectance and transmittance, Brewster's angle, total internal reflection, and evanescent wave. Mirrors and lenses and optical instruments based on them

UNIT4 WAVES OPTICS

9 hours

Huygens' principle, superposition of waves and interference of light by wavefront splitting and amplitude splitting; Young's double slit experiment, Newton's rings, Michelson interferometer. Fraunhofer diffraction from a single slit and a circular aperture, Diffraction gratings and their resolving power

UNIT5 LASERS

9 hours

Einstein's theory of matter radiation interaction and A and B coefficients; amplification of light by population inversion, different types of lasers: gas lasers (He-Ne, CO₂), solid-state lasers (Neodymium), Properties of laser beams: mono-chromaticity, coherence, directionality and brightness, applications of lasers in science, engineering and medicine.

TEXT BOOKS

- 1) M.N. Avadhanulu and P.G. Kshirsagar, "A Textbook of Engineering Physics" S.Chand Publishers, 2016 (for UNITs 1,3,4 &5)
- 2) G.Senthil Kumar, "Engineering Physics", VRB publishers, Chennai, 2015 (for UNIT2)

REFERENCE BOOKS

- 1) Brij Lal and Subramanian, "Waves and Oscillation", Vikas Publishing House, 2011
- 2) R. Murugesan, "Optics and Spectroscopy", S.Chand Publishers, 2015
- 3) Brij Lal and Subramanian, "Optics", S.Chand Publishers 2006
- 4) Ian G. Main, "Vibration and waves in physics", Cambridge University Press, 1978
- 5) H.J. Pain, "The physics of vibrations and waves", 6th edition, Wiley 2006
- 6) Ajoy Ghatak, "Optics", Tata McGraw-Hill publishing company, New Delhi, 2009
- 7) O. Svelto, "Principles of Lasers", Springer, 2010
- 8) Online reference Wikipedia.org

COURSE OUTCOMES (COs)															
CO1	Understand the basic concept of waves and lights														
CO2	Understand the importance of Ultrasonic waves and Non-DestructiveTesting														
CO3	Understand the propagation of light and geometrical optics														
CO4	Understand the optical phenomenon like interference, diffraction and superposition ofwaves														
CO5	Understand the concept of laser and its applications														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
COs\ POs	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03
CO1	H							L	M			M			

CO2	H							L	M						
CO3	M							H	M			M			
CO4	H							L	M						
CO5	H							L	M			M			
Category	Basic Sciences (BS)														
Approval	47 th Meeting of Academic Council														

U18BSCH101	ENGINEERING CHEMISTRY	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – School Level Chemistry				
	Course Designed by – Department of Chemistry				
OBJECTIVES: To gain fundamental knowledge of Engineering Chemistry and its applications					

UNIT I WATER TECHNOLOGY

9 hours

Introduction - Characteristics: Hardness of Water – Types - Temporary and Permanent Hardness - Estimation by EDTA method. Alkalinity – Types of Alkalinity - Phenolphthalein and Methyl Orange Alkalinity - Determination – Domestic Water Treatment – Disinfection methods (Chlorination, Ozonation, and UV Treatment). Boiler feed water – Requirements – Disadvantages of using hard water in boilers (Caustic embrittlement, Boiler corrosion, Priming and foaming) – Prevention of scale formation – softening of hard water - Internal treatment (Calgon treatment method) – External treatment – Demineralization process – Desalination and Reverse osmosis.

UNIT II PHASE RULE AND ALLOYS

9 hours

Introduction: Statement of Phase Rule and Explanation of terms involved – One component system – Water system – Construction of phase diagram by thermal analysis - Condensed phase rule - Two Component System : Simple eutectic systems (lead-silver system) – eutectic temperature – eutectic composition – Pattinson's Process of desilverisation of Lead. Alloys: Importance, ferrous alloys – nichrome and stainless steel – 18/8 stainless steel - heat treatment of steel – annealing – hardening – tempering - normalizing – carburizing - nitriding. Non-ferrous alloys: Brass and Bronze.

UNIT III NON-CONVENTIONAL ENERGY SOURCES AND STORAGE DEVICES

9 hours

Introduction: Nuclear fission and nuclear fusion reactions – differences between nuclear fission and nuclear fusion reactions – nuclear chain reactions – nuclear energy critical mass - super critical mass - sub - critical mass Light water nuclear reactor for Power generation – breeder reactor. Solar energy conversion – solar cells – wind energy. Fuel cells – hydrogen – oxygen fuel cell. Batteries: Primary and secondary Batteries – differences between Primary and secondary Batteries Secondary batteries: Lead-acid storage battery – working – uses. Nickel-cadmium battery - working – uses. Solid – state battery: Lithium battery.

UNIT IV FUELS

9 hours

Introduction: Calorific value – types of Calorific value - gross calorific value – net calorific value. Analysis of Coal – Proximate and ultimate analysis – hydrogenation of coal - Metallurgical coke – manufacture by Otto-Hoffmann method. Petroleum processing and fractions – cracking – catalytic cracking – types – fixed bed catalytic cracking method-Octane

number and Cetane number. Synthetic petrol – Bergius processes – Gaseous fuels- water gas, producer gas, CNG and LPG. Flue gas analysis – importance - Orsat apparatus.

UNITV NANO CHEMISTRY

9 hours

Introduction: Nanochemistry: Definition-Classification based on dimensions-Size dependent properties. Types of nanomaterials: Nanoparticles: Synthesis by Bottom-up and top-down approaches - Nanoporous materials: Synthesis by sol-gel method. Nanowires: Synthesis by VLS mechanism. Carbon Nanotubes (CNTs): Single walled and Multi walled nanotubes - Mechanical and electrical properties of CNTs - Applications of CNTs - Synthesis of CNTs by Electric arc discharge method and Laser ablation method. Nanochemistry in biology and medicines – nanocatalysis. Nano composites – sensors and electronic devices.

TEXT BOOKS:

1. P.C.Jain and Monica Jain, “Engineering Chemistry” Dhanpat Rai Pub, Co., New Delhi (2002).

COURSE OUTCOMES (COs)															
CO1	To impart knowledge to the Students about the principles, water characterization, conversant with boiler feed water requirements and water treatment techniques.														
CO2	To make them understand the industrial importance of Phase rule and its applications to single and two componentsystems and appreciate the purpose and significance of alloys														
CO3	To make the students to be well versed with the principles of Conventional and non-conventional energy sources and energy storage devices.														
CO4	To make the students to have a deep knowledge of the Chemistry of Fuels and calorific value, manufacture of solid, liquid and gaseous fuels.														
CO5	To make them understand the Nanochemistry, Types of nanomaterials: Nanoparticles,Nanochemistry in biology and medicines.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
COs\ POs	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03
CO1	H			M					M						
CO2	H			L					M						
CO3	H			L					M						
CO4	H			L					M						
CO5	H			L					M						
Category	Basic Sciences (BS)														
Approval	47 th Meeting of Academic Council														

U18ESEE101	BASIC ELECTRICAL & ELECTRONICS ENGINEERING	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – School Level Physics				
	Course Designed by – Department of Electrical & Electronics Engineering				
OBJECTIVES	To gain fundamental knowledge of Electrical and Electronics Engineering and its applications				

UNIT1 DCCIRCUITS 12 hours

Electrical circuit elements, voltage and current sources, Fundamentals Relationship of VI for RLC circuit, Ohms Law, Source Transformation, Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Basics of Superposition, Thevenin and Norton Theorems, Maximum Power Transfer Theorem.

UNITII ACCIRCUITS 9 hours

Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Time-domain analysis of first-order RL and RC circuits. Three-phase balanced circuits, voltage and current relations in star and delta connections.

UNITIII ELECTRICAL MACHINES&TRANSFORMERS 9 hours

Principles of operation and characteristics of; DC machines, Synchronous machines, three phase and single phase induction motors. Transformers (single and three phase) regulation and efficiency, all day efficiency and auto-transformer.

UNIT4 SEMICONDUCTOR DEVICES AND APPLICATIONS 9 hours

Characteristics of PN Junction Diode – Zener Effect – Zener Diode and its Characteristics – Half wave and Full wave Rectifiers – Voltage Regulation. Bipolar Junction Transistor – CB, CE, CCB configurations and Characteristics – Elementary Treatment of Small Signal Amplifier and its applications, Introduction to OP-AMP.

UNIT5 DIGITAL ELECTRONICS 6 hours

Binary Number System – Logic Gates – Boolean Algebra – Half and Full Adders – Flip-Flops – Registers and Counters – Fundamentals of A/D and D/A Conversion.

TEXT BOOKS:

1. John Bird, Electrical Circuit Theory & Technology, Taylor & Francis Ltd, 6th edition, 2017.
2. Smarajit Ghosh, Fundamentals of Electrical and Electronics Engineering, Second Edition, PHI Learning, 2007.

COURSE OUTCOMES (COs)															
CO1	To gain knowledge regarding the various laws and principles associated with DC Circuits.														
CO2	To gain knowledge regarding fundamentals of AC circuits.														
CO3	To gain knowledge regarding electrical machines and transformers.														
CO4	To gain knowledge regarding various types of semiconductor devices and small signal amplifiers.														
CO5	To gain knowledge on principles of digital electronics systems.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

Category	Engg Sciences (ES)														
Approval	47 th Meeting of Academic Council														

U18BSBT101	BIOLOGY FOR ENGINEERS	L	T	P	C
	Total Contact Hours - 30	2	0	0	2
	Prerequisite – Higher Secondary level biology, basic concepts in cell signaling				
	Course Designed by – Dept of Industrial Biotechnology				
OBJECTIVES: To provide a basic understanding of the biological systems and its applications in the industrial sector					

UNIT I INTRODUCTION TO LIFE

6 hours

Characteristics of living organisms - Basic classification - cell theory - structure of prokaryotic and eukaryotic cell - Introduction to biomolecules - general classification and important functions of carbohydrates - lipids - proteins - nucleic acids - vitamins

UNIT II BIODIVERSITY

6 hours

Plant System: basic concepts plant growth - nutrition - photosynthesis - Animal System: elementary study of digestive - respiratory - circulatory - excretory systems and their functions. Microbial System - types of microbes - economic importance and control of microbes.

UNIT III GENETICS AND IMMUNE SYSTEM

6 hours

Evolution: theories of evolution- evidence of laws of inheritance-variation and speciation-nucleic acids as a genetic material-central dogma - immunity-antigens-antibody-immune response.

UNITIV HUMAN DISEASES

6hours

Definition- causes, symptoms, diagnosis, treatment and prevention of diabetes, cancer, hypertension, AIDS and Hepatitis

UNITV BIOLOGY AND ITS INDUSTRIAL APPLICATION

6hours

Transgenic plants and animals-stem cell and tissue engineering-bioreactors-biopharming-recombinant vaccines-cloning-bioremediation-biofertilizer-biocontrol- biosensors-biopolymers-bioenergy-biomaterials-biochips

TEXT BOOKS:

1. A Text book of Biotechnology, R.C.Dubey, S. Chand Higher Academic Publications, 2013
2. Diseases of the Human Body, Carol D. Tamparo and Marcia A. Lewis, F.A. Davis Company, 2011.
3. Biomedical instrumentation, Technology and applications, R. Khandpur, McGraw Hill Professional, 2004

REFERENCE BOOKS

1. Biology for Engineers, Arthur T. Johnson, CRC Press, Taylor and Francis, 2011
2. Cell Biology and Genetics (Biology: The UNITY and diversity of life Volume I), Cecie Starr, Ralph Taggart, Christine Evers and Lisa Starr, Cengage Learning, 2008
3. Biotechnology Expanding horizon, B.D. Singh, Kalyani Publishers, 2012

COURSE OUTCOMES (COs)															
CO1	To understand the basic concepts of the cell and its structure														
CO2	To understand about biodiversity and its conservation														
CO3	To know the fundamentals of genetics and the immune system														
CO4	To create an awareness about human diseases														
CO5	To give a basic knowledge of the applications of transgenics														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18BSPH2L2	WAVE OPTICS AND SEMICONDUCTOR PHYSICS LABORATORY	L	T	P	C
	Total Contact Hours - 45	2	0	0	2
	Prerequisite – Higher Secondary School Physics				
	Course Designed by – Department of Physics				
OBJECTIVES: To impart knowledge of practical Physics to the students					

Physics Lab experiments for Semester I & II

List of Experiments for Waves and Optics – Common for all branches

- 1) Ultrasonic Interferometer
- 2) Air-wedge Experiment
- 3) Particle size determination
- 4) Determination of acceptance angle
- 5) Determination of Laser Wavelength
- 6) Spectrometer – Determination of wavelength using grating

List of Experiments for Semiconductor Physics – Circuit branches

- 1) Determination of Band Gap
- 2) Zener diode characteristics
- 3) p-n junction diode Characteristics
- 3) Transistor Characteristics
- 5) V-I characteristics using LDR circuit
- 6) Carey Foster's Bridge

COURSE OUTCOMES (COs)															
CO1	To Understand the fundamental concept of optics														
CO2	To Understand the concept of production of ultrasonic waves														
CO3	To Understand the functions of semiconductor														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
COs\ POs	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03

U18BSCH2L4	CHEMISTRY LABORATORY	L	T	P	C
	Total Contact Hours – 45	0	0	3	1.
	Prerequisite – Engineering Chemistry				
	Course Designed by – Department of Chemistry				
OBJECTIVES: To enhance the practical knowledge on Chemistry through Volumetric and circuit experiments					

LIST OF EXPERIMENTS

1. Determination of Total Hardness, Temporary Hardness and Permanent hardness of Water by EDTA method
2. Estimation of Alkalinity - Titrimetry
3. Estimation of Dissolved Oxygen
4. Estimation of Chlorides in Water by Argentometric Method (MOHR'S Method)
5. Estimation of Copper by EDTA method
6. Estimation of Iron in Water by Spectrophotometry
7. Conductometric Titration of Strong Acid with Strong Base
8. Determination of Molecular weight of a polymer by Viscosity Average Method
9. pH measurements for Acid - alkali Titrations
10. Determination of rate of corrosion by weight loss method.
11. Conductometric Precipitation titration
12. Determination of Water Crystallization

REFERENCES

2. S.S. Dara, A text book on experiments and calculation Engg.

COURSE OUTCOMES (COs)															
CO1	Students will able to analyze - hardness, Alkalinity, Dissolved oxygen, Chlorides in Water by Argentometric Method, Determination of Water of Crystallization and as well as estimation of Copper by EDTA method using volumetric analysis.														
CO2	Students will understand basic principle of spectrophotometric method														
CO3	Students will learn Conductometric Titration of Strong Acid with Strong Base and and Conductometric Precipitation titration.														
CO4	Student will be able to analyze Determination of Molecular weight of a polymer by Viscosity Average Method														
CO5	Student will understand about pH measurements for Acid - alkali Titrations and rate of corrosion by weight loss method														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18ESME1L2	WORKSHOP/MANUFACTURING PRACTICES	L	T	P	C
	Total Contact Periods – 75	1	0	4	3
	Prerequisite – NIL				
	Course Designed by – Department of Mechanical Engineering				

OBJECTIVES	To educate the students on common manufacturing processes employed in Industries.
-------------------	---

SYLLABUS

Lectures&videos:

15 hours

Detailed contents

- Manufacturing Methods- casting, forming, machining, joining, advanced manufacturing methods **3lecture**
- CNC machining, Additive manufacturing **2lecture**
- Fitting operations & power tools **2lecture**
- Carpentry **2lecture**
- Plastic moulding, glass cutting **2lecture**
- Metal casting **2lecture**
- Welding (arc welding & gas welding), brazing **2lecture**

WORKSHOP PRACTICE:

1. Machineshop **6 hours**
 - a) Facing
 - b) Turning
 - c) Drilling Practice
2. Fittingshop **6 hours**
 - a) Fitting Exercises–Preparation of square fitting
 - b) Vee–fitting models.
3. Carpentry **9 hours**
 - a) Preparation Lap joints.
 - b) Mortise and Tenon joints.
 - c) Cross Half.
 - d) Dove Tail.
4. Weldingshop **(Arc welding 6 hrs + gas welding 3 hrs) 9 hours**
Preparation of butt joints, lap joints and tee joints
5. Sheet Metal working **9 hours**
 - a) Forming & Bending:
 - b) Model making–Trays, funnels, etc.
 - c) Different type of joints
6. Demonstration **6 hours**

Smithy operations, upsetting, swaging, setting down and bending. Example–Exercise–
Production of hexagonal headed bolt.

Examinations could involve the actual fabrication of simple components, utilizing one or more of the techniques covered above.

SUGGESTED TEXT/REFERENCE BOOKS:

COURSE OUTCOMES (COs)															
CO1	Students will gain knowledge of the different manufacturing processes.														
CO2	Students will be able to fabricate components with their own hands.														
CO3	Students will gain practical knowledge of the dimensional accuracies and dimensional tolerances.														
CO4	Students will be able to produce small devices of their interest.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
COs\ POs	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03
CO1	H		M						M						
CO2	H		M						M						
CO3	H		M						M						
CO4	H		M						M						
Category	Engg Science (ES)														
Approval	47 th Meeting of Academic Council														

U18ESEE1L3	BASIC ELECTRICAL AND ELECTRONIC ENGINEERING PRACTICESLABORATORY	L	T	P	C
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – School Level Physics & Basic Electrical and Electronic Engineering				
	Course Designed by – Department of Electrical & Electronics Engineering				
OBJECTIVES: To enhance the practical knowledge on basics of electrical and electronics components and circuits.					

LIST OF EXPERIMENTS FOR BASIC ELECTRICAL ENGINEERING LAB

- Verification of Ohms and Kirchoff's Voltage and Current Laws
- Measurement of the steady-state and transient time-response of R-L, R-C, and R-L-C circuits to a step change in voltage (transient may be observed on a storage oscilloscope). Sinusoidal steady state response of R-L, and R-C circuits – impedance calculation and verification.
- Fluorescent lamp wiring
- Staircase wiring
- Measurement of energy using single phase energymeter
- Observation of the no-load current waveform on an oscilloscope and Measurement of Primary and secondary voltages and currents of a Transformer
- Demonstration of cut-out sections of machines: dc machine (commutator-brush arrangement), induction machine (squirrel cage rotor), synchronous machine (field winding - slip ring arrangement) and single-phase induction machine.

8. Demonstration of (a) dc-dc converters (b) dc-ac converters – PWM waveform (c) the use of dc-ac converter for speed control of an induction motor and (d) Components of LT switchgear.

LIST OF EXPERIMENTS FOR BASIC ELECTRONICS ENGINEERING LAB

1. Measurement of ac signal parameters using cathode ray oscilloscope and function generator.
2. Characteristics – Half wave and Full wave Rectifiers
3. Characteristics – Common Base transistor configuration
4. Verification of truth tables of OR, AND, NOT, NAND, NOR gates and Flip-flops JK and RS
5. Applications of Operational Amplifier

COURSE OUTCOMES (COs)													
CO1	To handle basic electrical equipment and verify current and voltage law												
CO2	To understand the steady-state and transient time-response of R-L, R-C, and R-L-C circuits												
CO3	To understand domestic wiring procedures practically.												
CO4	To analyze ac signal parameters using cathode ray oscilloscope and function generator												
CO5	To understand all the fundamental concepts semiconductor Diode and Transistor												
CO6	To understand all the fundamental concepts of logic Gates and Flip-Flaps												
Mapping of Course Outcomes (COs) with Programme Outcomes (POs) (H/M/L indicates strength of correlation) H-High, M-Medium, L-Low

	CO4	H	H	M			L			M		H	L
	CO5	H	H	M			L			M		H	L
	CO6	H	H	M			L			M		H	L
3	Category	Engg Science (ES)											
4	Approval	47 th Meeting of Academic Council											

U18HSEN201	TECHNICAL ENGLISH	L	T	P	C
	Total Contact Periods – 45	2	1	0	3
	Prerequisite– I semester English				
	Course Designed by – Department of English				
OBJECTIVES	To gain fundamental knowledge of English language and its usage in day to day life.				

UNIT I LISTENING

9 hours

Listening- Listening to talks mostly of a scientific/technical nature and completing information-gap exercises-Speaking- Asking for and giving directions-extended definitions –listening to daily issue- -Vocabulary Development- technical vocabulary - Language Development –subject verb agreement – compound words.

UNITII READING**9 hours**

Reading – reading longer technical texts- identifying the various transitions in a text- interpreting charts, graphs after reading the, practice in speed reading- vocabulary Development-vocabulary used in formal letters/emails and reports -Language Development personal passive voice, numerical adjectives.

UNITIII TECHNICAL WRITING**9 hours**

Writing after listening to classroom lectures- talk should be on engineering /technology– introduction to technical presentations- longer texts both general and technical, Describing a process, use of sequence words- Vocabulary Development- sequence words- Misspelled words.

UNITIV FORMAL WRITING**9 hours**

Writing- email etiquette- job application – cover letter –Resume preparation (via email and hard copy)- analytical essays and issue based essays–Vocabulary Development- finding suitable synonyms-paraphrasing-. Language Development- clauses- dependant, independent, if conditionals.

UNITV LANGUAGE DEVELOPMENT**9hours**

Speaking –participating in a group discussion – role play, Writing– Writing reports- minutes of a meeting- accident and survey-Vocabulary Development- transitive, intransitive verbs, Language Development- reported speech.

COURSE OUTCOMES (COs)															
CO1	The student will acquire basic proficiency in English														
CO2	Reading and listening ability will improve.														
CO3	Comprehension techniques will develop.														
CO4	writing and speaking skills will be acquired														
CO5	Overall communication skills will make them employable.														
Mapping of Course Outcomes with Program outcomes (POs) (L/M/H indicates strength of correlation) H-High, M-Medium, L- Low

U18BSMA201	ENGINEERING MATHEMATICS – II	L	T	P	C
	Total Contact Periods – 60	3	1	0	4
	Prerequisite – School Level Mathematics				
	Course Designed by – Department of Mathematics				
OBJECTIVES	➤ The objective of this course is to equip the students of Engineering and Technology with techniques in ordinary equations, vector calculus, complex variables. ➤ Laplace transform with advanced level of mathematics and applications that would be essential to formulate problems in engineering environment.				

UNIT I ORDINARY DIFFERENTIAL EQUATIONS (9+3)hours

Higher order linear differential equations with constant coefficients – linear differential equations with variable coefficients – Euler's and Legendre's linear equations – Simultaneous first order linear equations with constant coefficients – Method of variation of parameters.

UNIT II VECTOR CALCULUS (9+3)hours

Scalar and vector point function - Gradient, Divergence and curl – Directional derivatives – Angle between two surfaces – Irrotational and Solenoidal vector fields – Line Integral – Green's theorem – Gauss divergence theorem and Stokes' theorem – Simple applications involving cubes and rectangular parallelepipeds.

UNIT III ANALYTIC FUNCTIONS (9+3)hours

Functions of complex variable - Analytic functions – Necessary and sufficient conditions (without proof), Cauchy Riemann Equations in Cartesian and polar form – Harmonic functions – properties of analytic functions – Construction of analytic functions using Milne Thomson method – Conformal mapping : $w = z + \bar{z}$, $w = z^2$, $1/z$ and Bilinear Transformation.

UNIT IV COMPLEX INTEGRATION (9+3)hours

Cauchy integral theorem – Cauchy's integral formula – problems – Taylor's and Laurent's Series – classification of Singularities – Poles and Residues – method of finding residues – Cauchy's residue theorem and its applications to evaluate real integrals – contour integration.

UNIT V LAPLACE TRANSFORMS (9+3)hours

Transforms of elementary functions – Basic properties – Shifting theorem – Transforms of derivatives and integrals – Initial and final value theorem – Laplace transform of Periodic Functions – Inverse Laplace transform – Convolution theorem – Periodic Functions – Applications of Laplace transform for solving linear ordinary differential equations up to second order with constant coefficient.

TEXT BOOKS

1. Erwin Kreyszig, Advanced Engineering Mathematics, 9th Edition, John Willie & Sons, 2006.
2. B.S. Grewal, Higher Engineering Mathematics, Khanna Publishers, 35th Edition, 2000.

4. George B. Thomas Jr., Maurice D. Weir, Joel R. Hass., Thomas' Calculus, 12th Edition, Addison-Wesley, Pearson.

COURSE OUTCOMES (COs)															
CO1	The mathematical tools for solution of differential equation that model physical process.														
CO2	To evaluate the line, surface and volume integrals using Green's, Stoke's and Gauss Theorems and their verification.														
CO3	To understand the analytic functions, conformal mapping and complex integration and their applications.														
CO4	To evaluate real and complex integrals using the Cauchy's integral formula and Residue theorem.														
CO5	To apply the concept of Laplace Transformation in analysis and solve differential equations.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

Approval	47 th Meeting of Academic Council														

U18BSPH202	SEMICONDUCTOR PHYSICS	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Higher Secondary School Physics				
	Course designed by – Department of Physics				
OBJECTIVES: To develop physics and engineering strategies of semiconductor materials and to discuss their functionalities in modern electronic and optoelectronic devices					

UNIT 1 INTRODUCTION AND ELECTRONIC STATES OF SEMICONDUCTORS

9 hours

Introduction to solid state materials - crystal structure - Reciprocal lattice - Brillouin zone and rules for band (k - space) representation. Dynamics of electrons in periodic potential:Kronig - penny and nearly free electron models - Real methods for band structure calculations; Band gaps in semiconductors - Holes and effective mass concept - Properties of conduction and valance bands

UNIT 2 CARRIERS AND DOPING**9 hours**

Fermi distribution and energy - Density of states - Valence and conduction band density of states - intrinsic carrier concentration – intrinsic Fermi level. Extrinsic semiconductors: n and p type doping - Densities of carriers in extrinsic semiconductors and their temperature dependence - extrinsic semiconductor Fermi energy level - Degenerate and non - degenerate semiconductors - Band gap engineering

UNIT 3 ELECTRICAL TRANSPORT**9 hours**

Scattering Mechanism: electron - electron and electron – phonon scattering. Macroscopic transport: Carrier transport by Diffusion - Carrier transport by Drift: Low field, High field and very high field.

UNIT 4 OPTICAL TRANSPORT**9 hours**

Electron - hole pair generation and recombination: band to band (direct and indirect band gap transitions) and intra band (impurity related) transitions, free - carrier & phonon transitions. Excitons: Origin, electronic levels and properties. Carrier transport - continuity equations. Optical constants: Kramers - Kronig relations.

UNIT 5 SEMICONDUCTOR AS DEVICES AND RECENT ADVANCES**9 hours**

Processing of Semiconductor devices (Brief), p - n Semiconductor as device and Semiconductor junctions - Homo and hetero Junctions. Active and passive optoelectronic devices: performance and response enhancement (photo processes).

Approval		47 th Meeting of Academic Council													

U18BSCH201	ENVIRONMENTAL SCIENCE	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – NIL				
	Course Designed by – Department of Chemistry				
OBJECTIVES	• To study the interrelationship between living organism and environment. • To study of the nature and concepts of ecosystem. • To learn about the integrated themes and biodiversity of an environment. • To study of pollution control and waste management. • To appreciate the importance of environment by assessing its impact on the human world; envision the surrounding environment, its functions and its value.				

UNITI NATURAL RESOURCES

9 hours

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people –Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems - Food resources: World food problems, changes caused by agriculture and overgrazing, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources. Case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification - Equitable use of resources for sustainable lifestyles.

UNITII ECOSYSTEMS

9 hours

Introduction: concepts of an ecosystem. Structure and function of an ecosystem, producers, consumers and decomposers, Energy flow in the ecosystem, Ecological succession, Food chains, food webs and ecological pyramids - Introduction, types, characteristic features, structure and function of the following ecosystem :- Forest ecosystem, Grassland ecosystem, Desertecosystem, Aquaticecosystems, (ponds, streams, lakes, rivers, oceans, estuaries)-Water conservation, rain water harvesting, watershed management, Resettlement and rehabilitation - Ethics : Issues and Possible Solutions, Climate change, global warming, acid rain, ozonelayer depletion.

UNIT III BIODIVERSITY AND ITS CONSERVATION

9hours

Introduction and Definition - genetic, species and ecosystems diversity, Biogeographically classification of India - Value biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values - Biodiversity at global, national and local levels. India as a mega diversity nation, Hot-spots of biodiversity - Threats to biodiversity, habitat, poaching of wildlife, man-wildlife conflicts, Endangered and endemic species of India, Conservation biodiversity - In-situ and Ex-situ conservation of biodiversity.

UNITIV ENVIRONMENTALSOLLUTION

9hours

Definition, Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear hazards. Solidwaste

Management: Causes, effects and control measures of urban and industrial wastes - Role of an individual in prevention of pollution - pollution case studies - Disaster Management: floods earthquake, cyclone and landslides.

UNIT V SOCIAL ISSUES AND HUMAN POPULATION

9 hours

Social issues: Environmental Protection Act, Air (Prevention and Control of pollution) Act, Water (Prevention and Control of pollution) Act, Wildlife Protection Act, Forest Conservation Act, Public awareness – Fireworks and its impact on the Environment – Chemicals used in Fireworks – (Fuel – oxidizing Agent – Reducing Agent – Toxic Materials – Fuel – Binder-Regulator) – Harmful nature of ingredients – chemical effects on health due to inhaling fumes. Human population: population growth, variation among nations, Population explosion-Family Welfare programs, Environment and human health, Human Rights, Value Education, HIV and AIDS, Women and Child Welfare, Role of Information Technology in Environment and Human health - Case Studies.

COURSE OUTCOMES (COs)																
CO1	Master core concepts and methods from ecological and physical sciences and their application in environmental problem solving															
CO2	Appreciate concepts and methods from ecological and physical sciences and their application in environmental problemsolving.															
CO3	Appreciate the ethical, cross-cultural, and historical context of environmental issues and the links between human and natural systems															
CO4	Understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales															
CO5	Apply systems concepts and methodologies to analyze and understand interactions between social and environmental processes															
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low																
COs\ POs	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	P S

COURSE OUTCOMES (COs)															
CO1	Develop algorithmic solutions to simple computational problems														
CO2	Demonstrate programs using simple Python statements and expressions.														
CO3	To gain knowledge regarding control flow and functions associated with python														
CO4	UsePythondatastructures–lists,tuples&dictionariesforrepresentingcompound data														
CO5	To gain knowledge on files, exception, modules and packages in Python for solving problems														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18ESME101	ENGINEERING GRAPHICS & DESIGN	L	T	P	C
	Total Contact Periods – 75	1	0	4	3
	Prerequisite – +12 Level Maths and Physical Science				
	Course Designed by – Department of Mechanical Engineering				
OBJECTIVES	To Prepare students to design a system, component, or process to meet desired needs, using the techniques, skills, and modern engineering tools necessary for engineering practice				

UNIT I TRADITIONAL ENGINEERING GRAPHICS

Principles of Engineering Graphics; Orthographic Projection; Descriptive Geometry; Drawing Principles; Isometric Projection; Surface Development; Perspective; Reading a Drawing; Sectional Views; Dimensioning & Tolerances; True Length, Angle; intersection, Shortest Distance.

UNIT II COMPUTER GRAPHICS

Engineering Graphics Software; -Spatial Transformations; Orthographic Projections; Model Viewing; Co-ordinate Systems; Multi-view Projection; Exploded Assembly; Model Viewing; Animation; Spatial Manipulation; Surface Modelling; Solid Modelling; Introduction to Building Information Modelling (BIM)

(Except the basic essential concepts, most of the teaching part can happen concurrently in the laboratory)

UNIT III INTRODUCTION TO ENGINEERING DRAWING (9+2Hrs)

Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering, Scales – Plain, Diagonal and Vernier Scales; Draw simple annotation, dimensioning and scale. Construction of Conic sections; Cycloid, Epicycloid, Hypo cycloid and Involute of circle;

UNIT IV ORTHOGRAPHIC PROJECTIONS (10+2 Hrs)

Principles of Orthographic Projections; Conventions; Projections of points and Orthographic projection of lines in first quadrant - Parallel to both the planes – Perpendicular to one plane – Parallel to one plane and inclined to other plane – Inclined to both the planes; Projections of planes inclined to either HP or VP;

UNIT V PROJECTIONS OF REGULAR SOLIDS & ISOMETRIC PROJECTIONS (10+3Hrs)

Projection of solids in first quadrant – Prism, Pyramid, Cone and Cylinder inclined to one plane; Principles of Isometric projection – Isometric Scale, Isometric Views, Conventions - Isometric Views of Simple Solids; Conversion of Isometric Views to Orthographic Views and Vice-versa;

UNIT VI SECTIONS OF SOLIDS AND DEVELOPMENT OF SURFACE (10+3Hrs)

Sectional view of Prism, Cylinder, Pyramid, Cone (simple position in first quadrant) with cutting planes perpendicular to one plane and parallel or inclined to another plane – True shape of sections; Development of lateral surfaces of Right Regular Solids-Prism, Pyramid, Cylinder and Cone;

UNIT VII BUILDING DRAWING (9+2Hrs)

Introduction to building drawing; Types of Projection adopted in Building Drawing; Scales for various types of Drawings, Symbols, Conventions and Abbreviations. Drawing of residential single and two storied buildings with detail of Line plan, Foundation Plan, Ground floor Plan, First floor plan, Elevation and Sections

UNIT VIII OVERVIEW OF COMPUTER GRAPHICS (12+3Hrs)

Introduction to CAD; Basic commands; Coordinate systems; Setting up of UNITS and drawing limits; ISO and ANSI standards for coordinate dimensioning and tolerance; Orthographic constraints, Snap to objects manually and automatically; Setup a drawing with proper scale – Dimensioning commands, Editing Dimensions and Dimension text; Producing drawings by using various coordinate input entry methods to draw straight lines, Applying various ways of drawing circles; Create basic drawing of objects such as polygon and general multi-line figures;

Creating orthographic views of simple solids like prism, pyramid, cylinder, cone. Drawing sectional views of prism, pyramid, cylinder and cone; Preparation of fabrication drawing (Development of surfaces); Drawing front view, top view and side view of objects from the given pictorial view; Creation of 3-D models of simple objects.

TEXT BOOKS

1. Bhatt N.D., Panchal V.M. & Ingle P.R., (2014), Engineering Drawing, Charotar Publishing House
2. Shah, M.B. & Rana B.C. (2008), Engineering Drawing and Computer Graphics, Pearson Education
3. Agrawal B. & Agrawal C. M. (2012), Engineering Graphics, TMH Publication
4. Narayana, K.L. & P Kannaiah (2008), Text book on Engineering Drawing, Scitech Publishers
5. (Corresponding set of) CAD Software Theory and User Manuals

COURSE OUTCOMES (COs)															
CO1	Students will gain Exposure to engineering communication.														
CO2	Students will learn standards of engineering graphics.														
CO3	Students will get Exposure to basics of building construction														
CO4	Students will get Exposure to computer-aided geometric design														
CO5	Student will gain basic knowledge and Exposure to the visual aspects of Engineering Design.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18ESCS1L1	PROBLEM SOLVING AND PYTHON PROGRAMMING LABORATORY	L	T	P	C
	Total Contact Hours – 45	0	0	3	1.5
	Prerequisite – PROBLEM SOLVING AND PYTHON PROGRAMMING				
	Course Designed by – Department of Computer Science & Engineering				
OBJECTIVES: To enhance the practical knowledge on writing programs using Python					

LIST OF EXPERIMENTS FOR PROBLEM SOLVING AND PYTHON PROGRAMMING LAB

1. Compute the GCD of two numbers.
2. Find the square root of a number (Newton's method)
3. Exponentiation (Power of a number)
4. Find the maximum of a list of numbers

5. Linear search and Binarysearch
6. Selection sort, Insertionsort
7. Mergesort
8. First n primenumbers
9. Multiplymatrices
10. Find the most frequentwords in a text read from a file
11. Simulate elliptical orbits inPygame
12. Simulate bouncing ball usingPygame
13. Simulate matrix operations withScilab
14. Simulate fitting curve with NumPy andMatplotlib

PLATFORM NEEDED

Python 3 interpreter for Windows/Linux and Scilab

COURSE OUTCOMES (COs)															
CO1	Write, test, and debug simple Python programs.														
CO2	Implement Python programs with conditionals and loops														
CO3	Develop Python programs step-wise by defining functions and calling them														
CO4	Use Python lists, tuples, dictionaries for representing compound data														
CO5	Read and write data from/to files in Python and to simulate using the packages Scilab,NumPy and Matplotlib														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18BSMA304	PROBABILITY AND QUEUING THEORY	L	T	P	C
	Total Contact Periods- 60	3	1	0	4
	Prerequisite – Basic knowledge in probability and statistics				
	Course Designed by : Department of Mathematics				
OBJECTIVE	➤ To develop analytical capability and to impart knowledge in Statistical methods and Queuing theory and their applications in Engineering and Technology. ➤ To develop the knowledge of Statistical methods and its applications so as to appreciate them for solving real world problems.				

UNIT I RANDOM VARIABLES (9+3)

Discrete and continuous random variables – Moments – Moment generating functions – Binomial, Poisson, Geometric, Uniform, Exponential, Gamma and Normal distributions.

UNIT II TWO – DIMENSIONAL RANDOM VARIABLES (9+3)

Joint distributions – Marginal and conditional distributions – Covariance – Correlation and Linear regression – Transformation of random variables.

UNITIII RANDOM PROCESSES (9+3)

Classification – Stationary process – Markov process – Poisson process – Discrete parameter Markov chain – Chapman Kolmogorov equations – Limiting distributions.

UNITIV QUEUING MODELS (9+3)

Markovian queues – Birth and Death processes – Single and multiple server queueing models – Little's formula – Queues with finite waiting rooms – Queues with impatient customers: Balking and reneging.

UNITV ADVANCED QUEUING MODELS (9+3)

Finite source models – M/G/1 queue – Pollaczek-Khinchin formula – M/D/1 and M/EK/1 as special cases – Series queues – Open Jackson networks.

Bangalore, 2nd Edition, 2012.

COURSE OUTCOMES (COs)															
CO1	Understand the notations various types of random variables and probability distributions.														
CO2	Apply the concepts of two dimensional random variables.														
CO3	Explain the concepts of random processes.														
CO4	Describe the basic concepts of queuingmodels														
CO5	Analyze the extended models in advanced queuing models.														
CO6	Apply probabilistic theory for real time problems.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18ESIT302	PRINCIPLES OF COMMUNICATION SYSTEMS	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite –Wave optics and Basic Electrical and Electronics system				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
- To Introduce Different Methods Of Analog Communication And TheirSignificance - To Introduce Digital Communication Methods For High Bit RateTransmission - To Introduce The Concepts Of Source And Line Coding Techniques ForEnhancing Rating Of Transmission Of Minimizing The Errors InTransmission. - To Introduce MAC Used In Communication Systems For Enhancing The Number Of Users. - To Introduce Various Media For Digital Communication					

UNITI ANALOGCOMMUNICATION 9

Signals – Analog and Digital, Modulation Techniques- AM – Frequency Spectrum – Vector Representation – Power Relations – Generation Of AM – DSB, DSB/SC, SSB, VSB AM Transmitter & Receiver; FM And PM Techniques – Frequency Spectrum – Power Relations : Generation Of FM NBFM& WBFM, Amstrong Method & Reactance Modulations.

UNITII DIGITAL COMMUNICATION 9

Concepts Of Sampling And Sampling Theorems, Pulse Modulations:- PAM, PWM, PPM, PTM, Quantization And Coding : DCM, DM, Slope Overload Error. ADM, DPCM, OOK Systems – ASK, FSK, PSK, BSK, QPSK, QAM, MSK, GMSK, Applications Of Data Communication.

UNITIII INFORMATION THEORY 9

Primary Communication – Entropy, Properties, BEC, Source Coding :Shannon Fano, Huffman Coding : Noiseless Coding Theorem, BW – SNR Trade Off Codes: NRZ, RZ, AMI, HDBP, ABQ, Efficiency Of Transmissions, Error Control Codes And Applications: Convolutions & Block Codes.

UNITIV SPREAD SPECTRUM AND MULTIPLEACCESS METHODS 9

FDMA, TDMA, CDMA, SDMA ,**Spread Spectrum and Multiple Access Methods for wireless system engineering**

UNITV OPTICAL FIBER , SATELLITE,POWERLINE-SCADA 9

Fibers – Types: Sources, Detectors Used, Digital Filters, Optical Link - Orbits Types Of Satellites Frequency Used Link Establishment, MA Techniques Used In Satellite Communication, Earth Station; Aperture Actuators Used In Satellite – Intelsat and Insat, Power Line Carrier Communications-SCADA.

4. B.P.Lathi "Modern Digital And Analog Communication Systems" Oxford University Press, 1998.
5. Frenzel 4th edn Electronic Communication Systems.

COURSE OUTCOMES (COs)															
CO1	Understand thebasic working of communication systems														
CO2	Apply Analog modulation techniques and their comparative analysis and applications suitability														
CO3	Evaluate process of modulation and demodulation, characterization and performance parameters of transmission channels														
CO4	Understand Analog to digital conversion and Digital data transmission, Multiplexing Techniques.														
CO5	Summarize the multiple access techniques used in satellite communication														
CO6	Outline the fibre optical system used in communication														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCIT303	DATABASE MANAGEMENT SYSTEMS	L	T	P	C
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Computer fundamentals				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES • To learn the fundamentals of data models and to represent a database system usingER diagrams. • To study SQL and relational databasedesign. • To understand the internal storage structures using different file andindexing techniques which will help in physical DBdesign. • To understand the fundamental concepts of transaction processing- concurrencycontrol techniques and recoveryprocedures. • To have an introductory knowledge about the Storage and Query processing Techniques					

UNIT I RELATIONAL DATABASES 10

Purpose of Database System – Views of data – Data Models – Database System Architecture – Introduction to relational databases – Relational Model – Keys – Relational Algebra – SQL fundamentals – Advanced SQL features – Embedded SQL– Dynamic SQL

UNIT II DATABASE DESIGN 8

Entity-Relationship model – E-R Diagrams – Enhanced-ER Model – ER-to-Relational Mapping–Functional Dependencies–Non-loss Decomposition–First, Second, Third Normal Forms, Dependency Preservation – Boyce/Codd Normal Form – Multi-valued Dependencies and Fourth Normal Form – Join Dependencies and Fifth Normal Form

UNIT III TRANSACTIONS 9

Transaction Concepts – ACID Properties – Schedules – Serializability – Concurrency Control – Need for Concurrency – Locking Protocols – Two Phase Locking – Deadlock – Transaction Recovery – Save Points – Isolation Levels – SQL Facilities for Concurrency and Recovery.

UNIT IV IMPLEMENTATION TECHNIQUES 9

RAID–File Organization–Organization of Records in Files–Indexing and Hashing–Ordered Indices–B+tree Index Files–Btree Index Files–Static Hashing–Dynamic Hashing–Query Processing Overview – Algorithms for SELECT and JOIN operations – Query optimization using Heuristics and Cost Estimation.

UNIT V ADVANCED TOPICS 9

Distributed Databases: Architecture, Data Storage, Transaction Processing – Object-based Databases: Object Database Concepts, Object-Relational features, ODMG Object Model, ODL, OQL – XML Databases: XML Hierarchical Model, DTD, XML Schema, XQuery – Information Retrieval: IR Concepts, Retrieval Models, Queries in IR systems.

TEXT BOOKS:

1. Abraham Silberschatz, Henry F. Korth, S. Sudharshan, —Database System Concepts, Sixth Edition, Tata McGraw Hill, 2011.
2. Ramez Elmasri, Shamkant B. Navathe, —Fundamentals of Database Systems, Sixth Edition, Pearson Education, 2011.

REFERENCES:

2. Raghu Ramakrishnan, —Database Management Systems, Fourth Edition, McGraw-Hill College Publications, 2015.
3. G.K.Gupta, "Database Management Systems, Tata McGraw Hill, 2011. 4.

COURSE OUTCOMES (COs)	
CO1	Analyze the modern and futuristic database applications based on size and complexity
CO2	Apply queries using normalization criteria and optimize queries
CO3	Understand the transactions concepts and concurrency
CO4	Explain the indexing strategies in different database systems
CO5	Discuss the key challenges of advanced database systems
CO6	Evaluate how advanced databases differ from traditional databases

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
COs\ POs	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03

U18PCIT304	DATA STRUCTURES AND ALGORITHMS		L	T	P	C
	Total Contact Periods:45		3	0	0	3
	Prerequisite – Fundamentals of Programming Language					
	Course Designed by:- Dept of Information Technology					
OBJECTIVES • To understand the concepts ofADTs • To learn linear data structures – lists, stacks, andqueues • To understand sorting, searching and hashingalgorithms • To apply Tree and Graphstructures						

UNIT I LINEAR DATA STRUCTURES– LIST 12

Abstract Data Types (ADTs) – List ADT – array-based implementation – linked list implementation – singly linked lists- circularly linked lists- doubly-linked lists – applications of lists – Polynomial Manipulation – All operations (Insertion, Deletion, Merge, Traversal).

UNIT II LINEAR DATA STRUCTURES –STACKS, QUEUES 12

Stack ADT – Operations – Applications – Evaluating arithmetic expressions- Conversion of Infix to postfix expression – Queue ADT – Operations – Circular Queue – Priority Queue – deQueue – applications of queues.

UNIT III NON LINEAR DATA STRUCTURES–TREES 12

Tree ADT – tree traversals – Binary Tree ADT – expression trees – applications of trees – binary search tree ADT – Threaded Binary Trees- AVL Trees – B-Tree – B+ Tree – Heap – Applications of heap.

UNIT IV NON LINEAR DATA STRUCTURES– GRAPHS 12

Definition – Representation of Graph – Types of graph – Breadth-first traversal – Depth-first traversal – Topological Sort – Bi-connectivity – Cut vertex – Euler circuits – Applications of graphs.

UNIT V SEARCHING, SORTING AND HASHING TECHNIQUES 12

Searching- Linear Search – Binary Search. Sorting – Bubble sort – Selection sort – Insertion sort – Shellsort – Radix sort. Hashing- Hash Functions – Separate Chaining – Open Addressing – Rehashing – Extendible Hashing.

TEXT BOOKS:

1. Mark Allen Weiss, “Data Structures and Algorithm Analysis in C”, 2nd Edition, Pearson

Education,1997.

2. Reema Thareja, “Data Structures Using C”, Second Edition , Oxford University Press, 2011

3. Stephen G. Kochan, “Programming in C”, 3rd edition, Pearson Education.
4. Ellis Horowitz, Sartaj Sahni, Susan Anderson-Freed, “Fundamentals of Data Structures in C”, Second Edition, University Press,2008

COURSE OUTCOMES (COs)															
CO1	Understand linear data structures linked list and their applications.														
CO2	Demonstrate the linear data structures such as stacks, queues and their applications.														
CO3	Apply the non-linear data structures such as trees, graphsin real time applications.														
CO4	Analyze the various searching techniques														
CO5	Evaluate the various sorting algorithms and hashingtechnique														
CO6	Describe the overview of hashing techniques														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
COs\ POs	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03

Approval	48th meeting of the Academic Council														

U18PCIT305	OBJECT ORIENTED ANALYSIS AND DESIGN	L	T	P	C
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Computer Fundamentals				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
• To learn the basics of OO analysis and designskills. • To learn the UML design diagrams. • To learn to map design tocode. • To be exposed to the various testingtechniques.					

UNIT I UML DIAGRAMS

9

Introduction to OOAD – Unified Process – UML diagrams – Use Case – Class Diagrams– Interaction Diagrams – State Diagrams – Activity Diagrams – Package, component and Deployment Diagrams.

9

UNIT III CASE STUDY

9

UNITIV APPLYING DESIGN PATTERNS

9

UNITV CODINGANDTESTING

9

U18PCIT306	COMPUTER ARCHITECTURE		L	T	P	C
	Total Contact Periods:45		3	0	0	3
	Prerequisite – Computer Fundamentals					
	Course Designed by:- Dept of Information Technology					
OBJECTIVES • To learn the basic structure and operations of acomputer. • To learn the arithmetic and logic unit and implementation of fixed-point and floating point arithmeticunit. • To learn the basics of pipelinedexecution. • To understand parallelism and multi-coreprocessors. • To understand the memory hierarchies, cache memories and virtualmemories. • To learn the different ways of communication with I/Odevices.						

UNIT I BASIC STRUCTURE OF A COMPUTER SYSTEM 9

Functional Units – Basic Operational Concepts – Performance – Instructions: Language of the Computer – Operations, Operands – Instruction representation – Logical operations – decision making – MIPS Addressing.

UNIT II ARITHMETIC FOR COMPUTERS 9

Addition and Subtraction – Multiplication – Division – Floating Point Representation – Floating Point Operations – Subword Parallelism

UNIT III PROCESSOR AND CONTROL UNIT 9

A Basic MIPS implementation – Building a Data path – Control Implementation Scheme – Pipelining – Pipelined data path and control – Handling Data Hazards & Control Hazards – Exceptions.

UNIT IV PARALLELISM 9

Parallel processing challenges – Flynn's classification – SISD, MIMD, SIMD, SPMD, and Vector Architectures – Hardware multithreading – Multi-core processors and other Shared Memory Multiprocessors – Introduction to Graphics Processing Units, Clusters, Warehouse Scale Computers and other Message-Passing Multiprocessors.

UNIT V MEMORY & I/O SYSTEMS 9

Memory Hierarchy – memory technologies – cache memory – measuring and improving cache performance – virtual memory, TLB's – Accessing I/O Devices – Interrupts – Direct Memory Access – Bus structure – Bus operation – Arbitration – Interface circuits – USB.

COURSE OUTCOMES (COs)															
CO1	Understand the fundamental organization of computer system, operations and instructions.														
CO2	Design arithmetic and logic unit in computer architecture.														
CO3	Explain the concepts of pipelined execution and design control unit.														
CO4	Understand parallel processing architectures and GPU.														
CO5	Describe the various memory systems and its hierarchies.														
CO6	Demonstrate the different ways of communication with I/O devices														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCIT3L1	DATABASE MANAGEMENT SYSTEMS LAB	L	T	P	C
	Total Contact Periods:45	0	0	3	1.5
	Prerequisite – Computer fundamentals				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
• To understand data definitions and data manipulation commands • To learn the use of nested and join queries • To understand functions, procedures and procedural extensions of databases • To be familiar with the use of a front end tool • To understand design and implementation of typical database applications					

LIST OF EXERCISES:

1. Data Definition Commands, Data Manipulation Commands for inserting, deleting, updating and retrieving Tables and Transaction Control statements
2. Database Querying – Simple queries, Nested queries, Sub queries and Joins

3. Views, Sequences, Synonyms
4. Database Programming: Implicit and Explicit Cursors
5. Procedures and Functions
6. Triggers
7. Exception Handling
8. Database Design using ER modeling, normalization and Implementation for any application
9. Database Connectivity with Front End Tools
10. Case Study using real life database applications

COURSE OUTCOMES (COs)															
CO1	Construct data definitions and manipulation commands.														
CO2	Design applications to test Nested and Join Queries														
CO3	Implement simple applications that use the concept of Views														
CO4	Design applications that require a Front-end Tool, ER Modelling														
CO5	Analyze the use of Tables, Cursors, Views, Functions, Procedures and Triggers														
CO6	Design and implement typical real time database applications														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCIT3L2	OBJECT ORIENTED PROGRAMMING LAB	L	T	P	C
	Total Contact Periods:45	0	0	3	1.5
	Prerequisite – Computer fundamentals				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES • To build software development skills using java programming for real-world applications. • To understand and apply the concepts of classes, packages, interfaces, arraylist,exception handling and fileprocessing. • To develop applications using generic programming and eventhandling.					

LIST OF EXPERIMENTS

1. Develop a Java application to generate Electricity bill. Create a class with the following members: Consumer no., consumer name, previous month reading, current month

reading, type of EB connection (i.e domestic or commercial). Compute the bill amount using the following tariff.

If the type of the EB connection is domestic, calculate the amount to be paid as follows:

- First 100 units – Rs. 1 per unit
- 101-200 units – Rs. 2.50 per unit
- 201 -500 units – Rs. 4 per unit
- 501 units – Rs. 6 per unit

If the type of the EB connection is commercial, calculate the amount to be paid as follows:

- First 100 units – Rs. 2 per unit
- 101-200 units – Rs. 4.50 per unit
- 201 -500 units – Rs. 6 per unit
- 501 units – Rs. 7 per unit

2. Develop a java application to implement currency converter (Dollar to INR, EURO to INR, Yen to INR and vice versa), distance converter (meter to KM, miles to KM and vice versa) , time converter (hours to minutes, seconds and vice versa) using packages.
3. Develop a java application with Employee class with Emp_name, Emp_id, Address, Mail_id, Mobile_no as members. Inherit the classes, Programmer, AssistantProfessor, Associate Professor and Professor from employee class. Add Basic Pay (BP) as the member of all the inherited classes with 97% of BP as DA, 10 % of BP as HRA, 12% of BP as PF, 0.1% of BP for staff club fund. Generate pay slips for the employees with their gross and net salary.
4. Design a Java interface for ADT Stack. Implement this interface using array. Provide necessary exception handling in both the implementations.
5. Write a program to perform string operations using ArrayList. Write functions for the following
 - a. Append – add at end
 - b. Insert – add at particular index
 - c. Search
 - d. List all string starts with given letter
6. Write a Java Program to create an abstract class named Shape that contains two integers and an empty method named print Area(). Provide three classes named Rectangle, Triangle and Circle such that each one of the classes extends the class Shape. Each one of the classes contains only the method print Area () that prints the area of the given shape.
7. Write a Java program to implement user defined exception handling.
8. Write a Java program that reads a file name from the user, displays information about whether the file exists, whether the file is readable, or writable, the type of file and the length of the file in bytes.
9. Write a java program that implements a multi-threaded application that has three threads. First thread generates a random integer every 1 second and if the value is even, second thread computes the square of the number and prints. If the value is odd, the third thread will print the value of cube of the number.
10. Write a java program to find the maximum value from the given type of elements using a generic function.
11. Design a calculator using event-driven programming paradigm of Java with the following options.
 - a) Decimal manipulations
 - b) Scientific manipulations
12. Develop a mini project for any application using Java concepts.

COURSE OUTCOMES (COs)															
CO1	Construct Java programs for simple applications that make use of classes														
CO2	Develop and implement Java programs for simple applications that make use of packages and interfaces.														
CO3	Implement array list using Java														
CO4	Design Java applicationsusing generic programming, exception handling and multithreading														
CO5	Implement the concept of file processing in Java														
CO6	Develop real time applications using Java concepts														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCIT3L3	DATA STRUCTURES LAB	L	T	P	C
	Total Contact Periods:45	0	0	3	1.5
	Prerequisite – Computer Fundamentals				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
- To implement linear and non-linear data structures - To understand the different operations of searchtrees - To implement graph traversalalgorithms - To get familiarized to sorting and searchingalgorithm					

LIST OF EXPERIMENTS

1. Array implementation of Stack and Queue ADTs
2. Array implementation of List ADT
3. Linked list implementation of List, Stack and Queue ADTs
4. Applications of List, Stack and Queue ADTs
5. Implementation of Binary Trees and operations of Binary Trees
6. Implementation of Binary Search Trees
7. Implementation of AVL Trees
8. Implementation of Heaps using Priority Queues.
9. Graph representation and Traversal algorithms
10. Applications of Graphs
11. Implementation of searching and sorting algorithms
12. Hashing – any two collision techniques

COURSE OUTCOMES (Cos)

CO1	Apply the concepts of linear data structures such as list, stacks, queues and linked list.														
CO2	Implement non-linear data structure operations														
CO3	Construct functions to implement Graph and Tree Traversal algorithms														
CO4	Design programs based on the concept of sorting and searching techniques														
CO5	Design and apply structures with Hashing techniques														
CO6	Identify the appropriate data structure for any given problem														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18BSMA403	DISCRETE MATHEMATICS	L	T	P	C
	Total Contact Periods - 60	3	1	0	4
	Prerequisite – School Level Mathematics				
	Course Designed by:- Dept of Mathematics				
OBJECTIVES	Throughout the course, students will be expected to demonstrate their understanding of Discrete Mathematics by being able to do use mathematically correct terminology and notation, construct correct direct and indirect proofs, apply logical reasoning to solve a variety of problems and introduce simple concepts in graph theory.				

UNIT I MATHEMATICAL LOGIC (9+3)

Propositions and logic operators – Truth table – Equivalence – Implications – Tautologies – Laws of logic – Proofs in Propositional calculus – Inference theory – Predicate calculus.

UNIT II RELATION AND FUNCTIONS (9+3)

Different types of relations: Binary Relation – Partial Ordering Relation – Equivalence Relation – Sum and Product of Functions – bijective functions – Inverse and Composite Function

UNIT III RECURRENCE RELATIONS (9+3)

Recurrence relations – solving recurrence relation – Homogeneous and non-homogeneous recurrence relation – Generating Functions – Groups – Properties – cyclic groups and subgroups cosets – Lagrange's theorem.

UNIT IV GRAPH THEORY (9+3)

Introduction of Graphs – Graph terminology – Representation of Graphs – Connectivity – Euler and Hamilton path – Euler and Hamilton cycles – the Travelling sales man problem – Graph Isomorphism

UNIT V **BOOLEAN ALGEBRA** (9+3)

Boolean algebra – Partial order Relations on Boolean algebra – Boolean homomorphism – Disjunctive and conjunctive normal forms – Boolean functions.

TEXT BOOKS

1. Tremblay J.P and Manohar. R, “Discrete Mathematical Structures with Application to Computer Science”, McGraw Hill Book Company, International Edition, 1987
2. Kenneth H. Rosen, “Discrete Mathematics and its Applications”, McGraw Hill Book Company 1999.

REFERENCE BOOKS

1. Ralph P., Grimaldi, “Discrete and Combinatorial Mathematics”, Pearson Education, Fifth Edition, New Delhi. 2008
2. Venkataraman M.K, Discrete Mathematics”, The National Publishing Company 2000.
3. T. Veerarajan, “Discrete Mathematics”, Mc Graw Hill Publications, 2006.

COURSE OUTCOMES (COs)															
CO1	Define and analyze the fundamental Mathematical Concepts such as sets, relations, and functions.														
CO2	Learn the steps in propositional and Predicate logic.														
CO3	Expose to the concept of recurrence relations, generating functions, group, and cyclic groups, subgroups.														
CO4	Define the terminologies of graph and develop the given problems as graph networks and solve with techniques of graph theory.														
CO5	Understand the terminologies of Boolean algebra and mathematical induction,														
CO6	Evaluate Boolean functions and simplify expressions using the properties of Boolean algebra.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

	WEB PROGRAMMING	L	T	P	C
	Total Contact Periods: 45	3	0	0	3

U18PCIT401	Prerequisite – Internet Programming
	Course Designed by:- Dept of Information Technology
OBJECTIVES • To understand the concepts and architecture of the World WideWeb. • To understand and practice mark uplanguages • To understand and practice embedded dynamic scripting on client side Internet Programming • To understand and practice web development techniques onclient-side	

UNITI SCRIPTING 9

WebpageDesigningusingHTML-Scriptingbasics-Clientsideandserversidescripting.Java
Script-Object, names, literals, operators and expressions- statements and features- events -
windows - documents - frames - data types - built-in functions- Browser object model -
Verifying forms.-HTML5- CSS3- HTML 5 canvas - Web site creation usingtools.

UNITHI JAVA 9

Introduction to object oriented programming-Features of Java – Data types, variables and arrays – Operators – Control statements – Classes and Methods – Inheritance. Packages and Interfaces–ExceptionHandling–MultithreadedProgramming–Input/Output–Files–Utility Classes – StringHandling.

UNITIII JDBC 9

JDBCOverview–JDBCImplementation–Connectionclass–Statements–CatchingDatabase
Results,handlingdatabaseQueries.Networking–InetAddressclass–URLclass–TCPsockets
- UDP sockets, Java Beans–RMI.

UNITIV APPLETTS 9

Javaapplets-Lifecycleofanapplet-Addingimagestoanapplet-Addingsoundtoanapplet.Passing parameters to an applet.Event Handling. Introducing AWT: Working with Windows GraphicsandText.UsingAWTControls,LayoutManagersandMenus.Servlet-lifecycleof a servlet.The Servlet API, Handling HTTP Request and Response, using Cookies, Session Tracking.Introduction toJSP.

UNITV XML ANDWEB SERVICES 9

Xml – Introduction-Form Navigation-XML Documents- XSL – XSLT- Web services-UDDI- WSDL-Java web services – Web resources.

TEXT BOOKS:

1. Harvey Deitel, Abbey Deitel, Internet and World Wide Web: How To Program 5th Edition.
2. Herbert Schildt, Java - The Complete Reference, 7th Edition. Tata McGraw- HillEdition.
3. Michael Morrison XML Unleashed Tech mediaSAMS.

COURSE OUTCOMES (COs)	
CO1	Acquire knowledge about functionalities of world wide web

CO2	Explore markup languages features and design interactive web pages using them														
CO3	Experiment Client side validation using scripting languages														
CO4	Implement Open source JavaScript library functions														
CO5	Design front end web page and connect to the back end databases														
CO6	Explain the functions of client and servers on Web.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCIT402	OPERATING SYSTEM PRINCIPLES	L	T	P	C
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Computer Organization and Architecture				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES To understand basic operating system controls the computing resources and provide services to the users. This course provides an introduction to the operating system functions, design and implementation.					

UNIT I OPERATING SYSTEMS OVERVIEW 9

Computer System Overview-Basic Elements, Instruction Execution, Interrupts, Memory Hierarchy, Cache Memory, Direct Memory Access, Multiprocessor and Multicore Organization. Operating system overview-objectives and functions, Evolution of Operating System.-ComputerSystemOrganization-OperatingSystemStructureandOperations-System Calls, System Programs, OS Generation and SystemBoot.

UNIT II PROCESS MANAGEMENT 9

Processes-Process Concept, Process Scheduling, Operations on Processes, Interprocess Communication; Threads- Overview, Multicore Programming, Multithreading Models; Windows 7 - Thread and SMP Management.Process Synchronization - Critical Section Problem, Mutex Locks, Semaphores, Monitors; CPU Scheduling and Deadlocks.

UNIT III STORAGE MANAGEMENT 9

Main Memory-Contiguous Memory Allocation, Segmentation, Paging, 32 and 64 bit architecture Examples; Virtual Memory- Demand Paging, Page Replacement, Allocation, Thrashing; Allocating Kernel Memory, OS Examples.

UNIT IV I/O SYSTEMS 9

Mass Storage Structure- Overview, Disk Scheduling and Management; File System Storage- File Concepts, Directory and Disk Structure, Sharing and Protection; File System Implementation- File System Structure, Directory Structure, Allocation Methods, Free Space Management; I/O Systems.

UNIT V CASE STUDY 9

Linux System- Basic Concepts; System Administration-Requirements for Linux System Administrator, Setting up a LINUX Multifunction Server, Domain Name System, Setting Up Local Network Services; Virtualization- Basic Concepts, Setting Up Xen, VMware on Linux Host and Adding Guest OS

TEXT BOOK:

5. <https://www.free-ebooks.net/ebook/The-Easy-Guide-to-Operating-Systems>

COURSE OUTCOMES (COs)															
CO1	Recall the fundamental components of a computer operating system, Basics of operating system principles and System calls. Define process state and scheduler. List mass storage devices. Recall the concepts of storage allocation strategies, files system and Linux System.														
CO2	Describe, discuss, and explain the policies for scheduling, deadlocks, memory management, synchronization, system calls, file systems and virtualization concepts.														
CO3	Demonstrate and execute basic system calls, Schedulers, Memory management systems, Virtual Memory and Paging systems.														
CO4	Examine and Experiment the performance of scheduling algorithm, memory management strategies and disk storage structures														
CO5	Design and develop Linux multifunction server and Local network services														
CO6	Develop Virtualization Concept in OS by setting Up Xen, VMware on Linux Host and Adding Guest OS														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCIT403	SOFTWARE ENGINEERING METHODOLOGIES	L	T	P	C
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Fundamentals of Computing and Programming				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
• To learn about generic models of software development process. • To understand fundamental concepts of requirements engineering and Analysis Modeling. • To understand the different design techniques and their implementation. • To learn various testing and maintenance measures.					

UNIT I SOFTWARE PROCESS AND PROJECT MANAGEMENT 9

Introduction to Software Engineering, Software Process, Perspective and Specialized Process Models – Software Project Management: Estimation – LOC and FP Based Estimation, COCOMO Model – Project Scheduling – Scheduling, Earned Value Analysis - Risk Management.

UNIT II REQUIREMENTS ANALYSIS AND SPECIFICATION 9

Software Requirements: Functional and Non-Functional, User requirements, System requirements, Software Requirements Document – Requirement Engineering Process: Feasibility Studies, Requirements elicitation and analysis, requirements validation, requirements management-Classical analysis: Structured system Analysis, Petri Nets- Data Dictionary.

UNIT III RE DESIGN 9

Design process – Design Concepts-Design Model– Design Heuristic – Architectural Design – Architectural styles, Architectural Design, Architectural Mapping using Data Flow- User Interface Design: Interface analysis, Interface Design –Component level Design: Designing Class based components, traditional Components.

UNIT IV TESTING AND IMPLEMENTATION 9

Software testing fundamentals-Internal and external views of Testing-white box testing -basis path testing-control structure testing-black box testing- Regression Testing – Unit Testing – Integration Testing – Validation Testing – System Testing And Debugging – Software Implementation Techniques: Coding practices-Refactoring.

UNIT V PROJECT MANAGEMENT 9

Estimation – FP Based, LOC Based, Make/Buy Decision, COCOMO II - Planning – Project Plan, Planning Process, RFP Risk Management – Identification, Projection, RMMM - Scheduling and Tracking –Relationship between people and effort, Task Set & Network, Scheduling, EVA - Process and Project Metrics.

U18ESIT404	DIGITAL SYSTEM DESIGN	L	T	P	C
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Basic Electrical and Electronics Engg				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES: • To introduce the concept of digital and binary systems • To design and analyze combinational logic circuits. • To design and analyze sequential logic circuits. • To understand the basic software tools for the design and implementation of digital circuits and systems.					

UNIT I BOOLEAN ALGEBRA AND LOGIC GATES 9
 Review of Number Systems – Arithmetic Operations – Binary Codes – Boolean Algebra and Theorems – Boolean Functions – Simplification of Boolean Functions using Karnaugh Map and Tabulation Methods – Logic Gates – NAND and NOR Implementations.

UNIT II COMBINATIONAL LOGIC 9

UNIT III SYNCHRONOUS SEQUENTIAL LOGIC 9

Sequential Circuits – Latches and Flip Flops – Analysis and Design Procedures – State Reduction and State Assignment – Shift Registers – Counters – HDL for Sequential Logic Circuits.

UNITV	MEMORY ANDPROGRAMMABLE LOGIC	9
RAMandROM–MemoryDecoding–ErrorDetectionandCorrection–ProgrammableLogic Array – Programmable Array Logic – Sequential Programmable Devices – Application Specific Integrated Circuits.

Approval	48th meeting of the Academic Council

U18PCIT405	DATA COMMUNICATION AND COMPUTER NETWORKS	L	T	P	C
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Computer Fundamentals				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES • Togettheideaofchoosingtherequiredfunctionalityateachlayerforagivenapplication • To trace the flow of information from one node to another node in thenetwork. • To understanding of division of network functionalities in tolayers • To understand the component required to build different types ofnetworks • To identify the solution for the functionalities in eachlayer.					

UNIT I APPLICATION LAYER

9

Network Architecture – Layers - HTTP – DNS – E-Mail (SMTP, MIME, POP3, IMAP, Web Mail), FTP, Telnet - SNMP.

UNIT II TRANSPORT LAYER

9

User Datagram Protocol (UDP) – Transmission Control Protocol (TCP) – Flow Control – Congestion Control – Queuing - Discipline Introduction to Quality of services (QOS).

UNIT III NETWORK LAYER

9

Circuit Switching - Packet Switching Virtual Circuit Switching – IP – ARP – DHCP – ICMP – Routing – RIP – OSPF – Subnetting – CIDR – Interdomain Routing – BGP – IPV6 Basic Features – Inter Domain Multicast – Congestion Avoidance in Network Layer.

UNIT IV DATA LINK LAYER

9

Channel access on links – SDMA – TDMA – FDMA – CDMA – Hybrid Multiple Access Techniques – Issues in the Data Link Layer – Framing - Error correction and detection – Link Level Flow Control – Medium Access – Ethernet – Token Ring – FDDI – Wireless LAN – Bridges and Switches.

UNIT V DATA COMMUNICATIONS

9

Data Transmission – Transmission Media – Signal Encoding Techniques – Multiplexing – Spread Spectrum.

TEXT BOOKS:

1. James F. Kurose, Keith W. Ross, “Computer Networking, A Top-Down Approach Featuring the Internet”, Third Edition, Pearson Education, 2006.
2. Larry L. Peterson, Bruce S. Davie, “Computer Networks: A Systems Approach”, Fifth Edition, Morgan Kaufmann Publishers Inc., 2011.
3. William Stallings, “Data and Computer Communications”, Eighth Edition, Pearson Education, 2011.

REFERENCES:

1. Nader F. Mir, “Computer and Communication Networks”, First Edition, Pearson

Education, 2007.

2. Ying-Dar Lin, Ren-Hung Hwang and Fred Baker, Computer Networks: An Open Source Approach “, McGraw Hill Publisher, 2011.
3. Behrouz A. Forouzan, “Data communication and Networking”, Tata McGraw-Hill, 2004.

COURSE OUTCOMES (COs)															
CO1	Understand basic concepts of computer network technology.														
CO2	Explain Data Communications System and its components.														
CO3	Classify the different types of network topologies and protocols.														
CO4	Discuss the layers of the OSI model and TCP/IP and to explain the function(s) of each layer.														
CO5	Understand the different types of network devices and their functions.														
CO6	Apply signal Encoding techniques														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
COs\ POs	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03
CO1	2			3	2					2			3		
CO2		1		2						2			1		
CO3	2				3	3				2			3		
CO4	1	1	2	2						2			1		
CO5	1		3		1					2			2		
CO6		1								2			1		
Category	Professional Core (PC)														
Approval	48th meeting of the Academic Council														

U18PCIT4L1	DATA COMMUNICATION AND COMPUTER NETWORKS LAB	L	T	P	C
	Total Contact Periods:45	0	0	3	1.5
	Prerequisite – TCP/IP Principles and Architectures				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES • Toanalyzeacommunicationsystembyseparatingoutthedifferentfunctionsprovidedby thenetwork; • To understand that there are fundamental limits to any communicationssystem; • To understand the general principles behind multiplexing, addressing, routing, reliable transmission and other stateful protocols as well as specific examples ofeach; • To understand what FEC is and how CRCs work; • To compare communications systems in how they solve similarproblems; • To have an informed view of both the internal workings of the Internet and of a number of common Internet applications andprotocols.					

List of Experiments:

1. PC to PC Communication
2. Parallel Communication using 8 bit parallel cable
3. Serial communication using RS 232C Ethernet LAN protocol

4. To create scenario and study the performance of CSMA/CD protocol through simulation
Token bus and token ring protocols
5. To create scenario and study the performance of token bus and token ring protocols through simulation
6. Wireless LAN protocols
7. To create scenario and study the performance of network with CSMA / CA protocol and compare with CSMA/CD protocols.
8. Implementation and study of stop and wait protocol
9. Implementation and study of Go back-N and selective repeat protocols
10. Implementation of distance vector routing algorithm
11. Implementation of Link state routing algorithm
12. Implementation of Data encryption and decryption
13. Transfer of files from PC to PC using Windows / Unix socket processing

References:

1. <http://www.iconscope.net/network-laboratory-manual.pdf>

COURSE OUTCOMES (COs)															
CO1	Use knowledge to implement client server applications.														
CO2	Develop skills in UNIX socket programming.														
CO3	Develop skills to use simulation tools.														
CO4	Analyse the performance of network protocols and network traffic.														
CO5	Analyse the performance of various network tools and network programming														
CO6	Implement encryption and decryption techniques														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
COs\ POs	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03
CO1			2	2					2	2				1	1

CO3			2	2					2	2				2	L
CO4			2	2						2				1	
CO5			2	2						2				2	
CO6			2	2						2				1	
Category	Professional Core (PC)														
Approval	48th meeting of the Academic Council														

U18PCIT4L2	WEB PROGRAMMING LABORATORY	L	T	P	C
	Total Contact Periods:45	0	0	3	1.5
	Prerequisite – Internet Programming				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

- To understand program basic functions in Javascript and DHTML
- To use Javascript and DHTML to create web pages with advanced interactivity
- To use variables, conditionals, and loops in Javascript and DHTML programs
- To use Javascript to control browser frames, windows and to create functional forms
- To use Cascading Style Sheets (CSS) to design web pages and to create web pages with specialized fonts and design elements

LIST OF EXPERIMENTS:

1. Write a html program for Creation of web site with forms, frames, links, tables etc
2. Design a web site using HTML and DHTML. Use Basic text Formatting, Images,
3. Create a script that asks the user for a name, then greets the user with "Hello" and the user name on the page
4. Create a script that collects numbers from a page and then adds them up and prints them to a blank field on the page.
5. Create a script that prompts the user for a number and then counts from 1 to that number displaying only the odd numbers.
6. Create a script that will check the field in Assignment 1 for data and alert the user if it is blank. This script should run from a button.
7. Using CSS for creating websites
8. Create a simple application to access database using JDBC Formatting HTML with CSS.
9. Program for manipulating Databases and SQL.
10. Program using PHP database functions.
11. Write a web application that functions as a simple hand calculator, but also keeps a "paper trail" of all your previous work
12. Install Tomcat and use JSP and link it with any of the assignments above
13. Reading and Writing the files using .Net
14. Write a program to implement web service for calculator application
15. Implement RMI concept for building any remote method of your choice.

References:

1. http://docsfiles.com/pdf_web_programming_lab_manual.html

COURSE OUTCOMES (COs)															
CO1	Understand the basic concepts of the internet and insights of internet programming.														
CO2	Demonstrate the important HTML tags for designing static pages.														
CO3	Design web pages using Cascading Style Sheets.														
CO4	Demonstrate HTML web pages accessing database using JDBC.														
CO5	Select web application development software tools i.e. Ajax, PHP and XML etc.														
CO6	Identify the environments currently available on the market to design web sites.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
COs\ POs	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03

C06		1	3	2	2				2	2		2			3
Category	Professional Core (PC)														
Approval	48th meeting of the Academic Council														

U18PCIT4L3	OPERATING SYSTEM DESIGN LABORATORY	L	T	P	C
	Total Contact Periods:45	0	0	3	1.5
	Prerequisite – Operating System				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
• Understand the basics of operating systems like kernel,shell, types and views of operatingsystems • Describe the various CPU scheduling algorithms and removedeadlocks. • Explain various memory management techniques and concept ofthrashing • Use disk management and disk scheduling algorithms for better utilization of external memory. • Recognize file system interface, protection and securitymechanisms. • Explain the various features of distributed OS like Unix, Linux, windowsetc					

LIST OF EXPERIMENTS:

- Basics of UNIX commands.
- Shell Programming.
- Implement the following CPU scheduling algorithms
a) Round Robin b) SJF c) FCFS d) Priority
- Implement all file allocation strategies
a) Sequential b) Indexed c) Linked
- Implement Semaphores
- Implement all File Organization Techniques
a) Single level directory b) Two level c) Hierarchical d) DAG
- Implement Bankers Algorithm for Dead Lock Avoidance
- Implement an Algorithm for Dead Lock Detection
- Implement all page replacement algorithms
a) FIFO b) LRU c) LFU
- Implement Shared memory and IPC
- Implement Paging Technique of memory management.
- Implement Threading & Synchronization Applications

Reference:

1. <http://www.faadooengineers.com/threads/5366-Operating-System-ebook>

COURSE OUTCOMES (COs)	
CO1	Demonstrate the basics of operating systems like kernel, shell, types and views of operating systems.
CO2	Implement the various CPU scheduling algorithms and remove deadlocks.
CO3	Analyse various memory management techniques and concept of thrashing

CO4	Explain disk management and disk scheduling algorithms for better utilization of external memory.														
CO5	Evaluate file system interface														
CO6	Evaluate protection and security Mechanisms														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCIT501	DATA MINING	L	T	P	C
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Database Management System				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
• To understand data warehouse concepts, architecture, business analysis andtools • To understand data pre-processing and data visualizationtechniques					
• To study algorithms for finding hidden and interesting patterns indata • To understand and apply various classification and clustering techniques usingtools.					

UNIT I DATA WAREHOUSING, BUSINESS ANALYSIS AND ON-LINE ANALYTICAL PROCESSING(OLAP) 9

Basic Concepts – Data Warehousing Components – Building a Data Warehouse – Database Architectures for Parallel Processing – Parallel DBMS Vendors – Multidimensional Data Model – Data Warehouse Schemas for Decision Support, Concept Hierarchies-Characteristics of OLAP Systems – Typical OLAP Operations, OLAP and OLTP.

UNIT II DATA MINING – INTRODUCTION 9

Introduction to Data Mining Systems – Knowledge Discovery Process – Data Mining Techniques – Issues – applications- Data Objects and attribute types, Statistical description of data, Data Preprocessing – Cleaning, Integration, Reduction, Transformation and discretization, Data Visualization, Data similarity and dissimilarity measures.

UNIT III DATA MINING – FREQUENT PATTERN ANALYSIS 9

Mining Frequent Patterns, Associations and Correlations – Mining Methods- Pattern Evaluation Method – Pattern Mining in Multilevel, Multi Dimensional Space – Constraint Based Frequent Pattern Mining, Classification using Frequent Patterns

UNITIV CLASSIFICATION AND CLUSTERING 9
 Decision Tree Induction–Bayesian Classification–Rule Based Classification–Classification by Back Propagation – Support Vector Machines — Lazy Learners – Model Evaluation and Selection-Techniques to improve Classification Accuracy. Clustering Techniques – Cluster analysis-Partitioning Methods–Hierarchical Methods–Density Based Methods–Grid Based Methods – Evaluation of clustering – Clustering high dimensional data- Clustering with constraints, Outlier analysis-outlier detection methods.

UNITV WEKA TOOL 9
 Datasets – Introduction, Iris plants database, Breast cancer database, Auto imports database – Introduction to WEKA, The Explorer – Getting started, Exploring the explorer, Learning algorithms, Clustering algorithms, Association–rule learners.

3. Ian H. Witten and Eibe Frank, —Data Mining: Practical Machine Learning Tools and Techniques, Elsevier, Second Edition.

COURSE OUTCOMES (COs)															
CO1	Explain the basic concepts of data warehouse, business analysis and OLAP system														
CO2	Implement suitable pre-processing and visualization techniques for data analysis														
CO3	Demonstrate the frequent pattern and association rule mining techniques for data analysis														
CO4	Interpret appropriate classification and clustering techniques for data analysis														
CO5	Understand the roles that data mining plays in various fields and manipulate different data mining techniques														
CO6	Apply data mining algorithms to build analytical applications														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCIT502	MOBILE COMMUNICATION	L	T	P	C
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Computer Networks				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES • To understand the basic concepts of mobile computing. • To learn the basics of mobile telecommunication system. • To be familiar with the network layer protocols and Ad-Hoc networks. • To know the basis of transport and application layer protocols. • To gain knowledge about different mobile platforms and application development.					

UNIT I INTRODUCTION 9
Introduction to Mobile Computing – Applications of Mobile Computing- Generations of Mobile Communication Technologies- Multiplexing – Spread spectrum -MAC Protocols – SDMA- TDMA- FDMA- CDMA

UNIT II MOBILE TELECOMMUNICATION SYSTEM 9
Introduction to Cellular Systems – GSM – Services & Architecture – Protocols – Connection Establishment – Frequency Allocation – Routing – Mobility Management – Security –GPRS- UMTS – Architecture – Handover – Security

UNIT III MOBILE NETWORK LAYER 9
Mobile IP – DHCP – AdHoc– Proactive protocol-DSDV, Reactive Routing Protocols – DSR, AODV , Hybrid routing –ZRP, Multicast Routing- ODMRP, Vehicular Ad Hoc networks (VANET) –MANET Vs VANET – Security.

UNIT IV MOBILE TRANSPORT AND APPLICATION LAYER 9
Mobile TCP–WAP–Architecture–WDP–WTLS–WTP–WSP–WAE–WTA Architecture – WML

UNIT V MOBILE PLATFORMS AND APPLICATIONS 9
Mobile Device Operating Systems – Special Constraints & Requirements – Commercial Mobile Operating Systems–Software Development Kit:iOS,Android,BlackBerry,Windows Phone – MCommerce – Structure – Pros & Cons – Mobile Payment System – Security Issues

TEXT BOOKS:

5. Android Developers :<http://developer.android.com/index.html>

COURSE OUTCOMES (COs)															
CO1	Eexplain the basics concepts of mobile telecommunication systems.														
CO2	Describe generations of telecommunication systems in wireless network.														
CO3	Examine the functionality of MAC, network layer and to Identify a routing protocol for a given Ad hoc network														
CO4	Classify the functionality of Transport and Application layers														
CO5	Sketch a mobile application using android/blackberry/ios/Windows SDK														
CO6	Identify the limitations of 2G and 2.5G wireless mobile communication and use design of 3Gand beyond mobile communication systems														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
COs\ POs	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03

U18PCIT503	PRINCIPLES OF ARTIFICIAL INTELLIGENCE	L	T	P	C
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Computer fundamentals				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
To understand the various characteristics of Intelligent agents					
- To learn the different search strategies inAI - To learn to represent knowledge in solving AIproblems - To understand the different ways of designing softwareagents - To know about the various applications ofAI.					

UNIT I INTRODUCTION 9
Introduction–Definition – Future of Artificial Intelligence – Characteristics of Intelligent Agents–Typical Intelligent Agents – Problem Solving Approach to Typical AI problems.

UNIT II PROBLEMSOLVING METHODS 9
Problem solving Methods – Search Strategies- Uninformed – Informed – Heuristics – Local Search Algorithms and Optimization Problems – Searching with Partial Observations – Constraint Satisfaction Problems – Constraint Propagation – Backtracking Search – Game Playing – Optimal Decisions in Games – Alpha – Beta Pruning – Stochastic Games

UNITIII KNOWLEDGE REPRESENTATION 9

First Order Predicate Logic – Prolog Programming – Unification – Forward Chaining- Backward Chaining – Resolution – Knowledge Representation – Ontological Engineering- CategoriesandObjects–Events–MentalEventsandMentalObjects–ReasoningSystemsfor Categories – Reasoning with Default Information

UNITIV SOFTWARE AGENTS 9

Architecture for Intelligent Agents – Agent communication – Negotiation and Bargaining – Argumentation among Agents – Trust and Reputation in Multi-agent systems.

UNITV APPLICATIONS 9

AIApplications–LanguageModels–InformationRetrieval-InformationExtraction–Natural Language Processing – Machine Translation – Speech Recognition – Robot – Hardware – Perception – Planning –Moving

TEXT BOOKS:

1. S. Russell and P. Norvig, “Artificial Intelligence: A Modern Approach”, Prentice Hall, Third Edition, 2009.
2. I. Bratko, —Prolog: Programming for Artificial Intelligence, Fourth edition, Addison-Wesley Educational Publishers Inc., 2011.

REFERENCES:

3. William F. Clocksin and Christopher S. Mellish, —Programming in Prolog: Using the ISO Standard, Fifth Edition, Springer, 2003.

COURSE OUTCOMES (COs)															
CO1	Classify the basic concepts of AI and Problem Solving Approach to Typical AI problems														
CO2	Operate the apt agent strategy to solve a given problem														
CO3	Design software agents to solve a problem														
CO4	Explain applications for NLP that use Artificial Intelligence														
CO5	Describe the architecture for Intelligent Agents and agent communication														
CO6	Demonstrate fundamental understanding of the history of artificial intelligence (AI) and its foundations.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
COs\ POs	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03
CO1	3	2		3	3			2	3	2	1	2		3	
CO2	3	2		3	3			2	3	2	1	2		3	
CO3	3	2		3	3			2	3	2	1	2		3	
CO4	3	2		3	3			2	3	2	1	2		3	
CO5	3	2		3	3			2	3	2	1	2		3	
CO6	3	2		3	3			2	3	2	1	2		3	

COURSE OUTCOMES (COs)																
CO1	Create automata, regular expression for any pattern.															
CO2	Design Context free grammar for any construct.															
CO3	Construct Turing machines for regular language and non regular languages.															
CO4	Select the decidable problems NP Hard Problems															
CO5	Identify the concepts of normal forms and Programming Techniques for TM															
CO6	Demonstrate advanced knowledge of formal computation and its relationship to languages															
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low																
COs\ POs	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03

Approval	48th meeting of the Academic Council															

U18PCIT5L1	DATA MINING LAB	L	T	P	C
	Total Contact Periods:45	0	0	3	1.5
	Prerequisite – Database management system				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
• To be familiar with the algorithms of datamining, • To be acquainted with the tools and techniques used for knowledge discovery in databases. • To be exposed to web mining and textmining •					

LIST OF EXPERIMENTS:

- Creation of a Data Warehouse.
- Apriori Algorithm.
- FP-Growth Algorithm.
- K-Means Clustering.
- One Hierarchical Clustering Algorithm.
- Bayesian Classification.
- Decision Tree.
- Support Vector Machines.
- Applications of Classification for Web Mining.
- Case Study on Text Mining or Any Commercial Application.

COURSE OUTCOMES (COs)															
CO1	Demonstrate data mining techniques and methods to large data sets.														
CO2	Compare and contrast the various classifiers use Data Mining Tools														
CO3	Select association rules, Classification algorithms														
CO4	Implement K-Means Clustering, one hierarchical clustering algorithm														
CO5	Operate case Study on text mining or any commercial application														
CO6	Execute the knowledge retrieved through solving problems														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
COs\POs	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03
CO1	1	1	2	3	3	2			3	3		2		3	
CO2	1	1	2	3	3	2			3	3		2		3	
CO3	1	1	2	3	3	2			3	3		2		3	
CO4	1	1	2	3	3	2			3	3		2		3	
CO5	1	1	2	3	3	2			3	3		2		3	
CO6	1	1	2	3	3	2			3	3		2		3	
Category	Professional Core (PC)														
Approval	48th meeting of the Academic Council														

U18PCIT5L2	IT- WORKSHOP LAB	L	T	P	C
	Total Contact Periods:45	0	0	3	1.5
	Prerequisite – Matrix manipulation				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
- To be familiar with the MATLAB GUI and basic toolboxes - To be exposed to vector and matrix operations - To be familiar with arithmetic, logical and relational operations onmatrix					

LIST OF EXPERIMENTS:

1. Introduction to SDK of MATLAB
2. Basic Syntax and scalar arithmetic operations and calculations
3. Working with formulas
4. Arithmetic operations in matrix data
5. Matrix operations (Inverse, Transpose)
6. Reading an image file
7. Reading from and writing to a text file
8. Introduction to toolboxes
9. Data visualization and plotting
10. Relational operators in data
11. Logical operation in data
12. Loops in MATLAB
13. Computing Eigen value for a matrix
14. Random number generation – Monte Carlo methods

REFERENCES:

1. Holly Moore, “MATLAB for Engineers” Third Edition – Pearson Publications
2. Stephen J. Chapman, “MATLAB Programming for Engineers” Fourth Edition – Thomson learning.

COURSE OUTCOMES (COs)															
CO1	Implement data handling in MATLAB environment and to solve simple matrix problems.														
CO2	Operate built-in toolboxes and be familiar with arithmetic, logical and relational operations on matrix														
CO3	Design to vector and matrix operations and be familiar with the MATLAB GUI and basic tool boxes														
CO4	Recognize Knowledge in Data visualization and plotting														
CO5	Report with Random number generation – Monte carlo methods														
CO6	Formulate and control simple plot and user-interface graphics objects in MATLAB.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
COs\ POs	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03

U18PCIT601	GRID AND CLOUD COMPUTING	L	T	P	C
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Distributed System				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES • To identify the technical foundations of cloudsystemsarchitectures. Analyze the problems and solutions to cloud applicationproblems. • To apply principles of best practice in cloud application design andmanagement. • To identify and define technical challenges for cloud applications and assess their importance					

UNIT I

INTRODUCTION

9

Evolution of Distributed computing: Scalable computing over the Internet – Technologies for network based systems – clusters of cooperative computers – Grid computing Infrastructures – cloud computing – service oriented architecture – Introduction to Grid Architecture and standards –

Elements of Grid – Overview of Grid Architecture.

UNIT II GRID SERVICES 9

Introduction to Open Grid Services Architecture (OGSA) – Motivation – Functionality Requirements – Practical & Detailed view of OGSA/OGSI – Data intensive grid service models – OGSA services.

UNIT III VIRTUALIZATION 9

Cloud deployment models: public, private, hybrid, community – Categories of cloud computing: Everything as a service: Infrastructure, platform, software – Pros and Cons of cloud computing – Implementation levels of virtualization – virtualization structure – virtualization of CPU, Memory and I/O devices – virtual clusters and Resource Management – Virtualization for data center automation.

UNIT IV PROGRAMMING MODEL 9

Open source grid middleware packages – Globus Toolkit (GT4) Architecture, Configuration – Usage of Globus – Main components and Programming model – Introduction to Hadoop Framework – Map reduce, Input splitting, map and reduce functions, specifying input and output parameters, configuring and running a job – Design of Hadoop file system, HDFS concepts, command line and java interface, dataflow of File read & File write.

UNIT V SECURITY 9

Trust models for Grid security environment – Authentication and Authorization methods – Grid security infrastructure – Cloud Infrastructure security: network, host and application level – aspects of data security, provider data and its security, Identity and access management architecture, IAM practices in the cloud, SaaS, PaaS, IaaS availability in the cloud, Key privacy issues in the cloud.

TEXT BOOKS:

1. Kai Hwang, Geoffery C. Fox and Jack J. Dongarra, “Distributed and Cloud Computing: Clusters, Grids, Clouds and the Future of Internet”, First Edition, Morgan Kaufman Publisher, an Imprint of Elsevier, 2012.

4. Ian Foster, Carl Kesselman, “The Grid: Blueprint for a New Computing Infrastructure”, 2nd Edition, Morgan Kaufmann
5. Frederic Magoules and Jie Pan, “Introduction to Grid Computing” CRC Press, 2009

COURSE OUTCOMES (COs)	
CO1	Implement grid computing techniques to solve large scale scientific problems.
CO2	Understand and apply the concept of virtualization.
CO3	Use the grid and cloud tool kits.
CO4	Apply the security models in the grid and the cloud environment.
CO5	Discuss about the basic concepts of Trust models for Grid security environment.
CO6	Describe the basic concepts of Trust models for Cloud Infrastructure security.

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCIT602	HUMAN COMPUTER INTERACTION	L	T	P	C
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Artificial Intelligence				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES • To design, implement and evaluate effective and usable graphical computer interfaces. • To describe and apply core theories, models and methodologies from the field of HCI. • To describe and discuss current research in the field of HCI. • To implement simple graphical user interfaces using the Java Swing toolkit. • To describe special considerations in designing user interfaces for older adults.					

UNIT I FOUNDATIONS OF HCI 9

The Human: I/O Channels – Memory – Reasoning And Problem Solving; The Computer: Devices – Memory – Processing And Networks; Interaction: Models – Frameworks – Ergonomics – Styles – Elements – Interactivity- Paradigms.

UNIT II DESIGN & SOFTWARE PROCESS 9

Interactive Design Basics – Process – Scenarios – Navigation – Screen Design – Iteration And Prototyping. HCI In Software Process – Software Life Cycle – Usability Engineering – Prototyping In Practice – Design Rationale. Design Rules – Principles, Standards, Guidelines, Rules. Evaluation techniques – Universal Design.

UNIT III MODELS AND THEORIES 9

Cognitive Models – Socio-Organizational Issues And Stake Holder Requirements – Communication And Collaboration Models- Hypertext, Multimedia And WWW.

UNIT IV MOBILE HCI 9

Mobile Ecosystem: Platforms, Application Frameworks- Types Of Mobile Applications: Widgets, Applications, Games- Mobile Information Architecture, Mobile 2.0, Mobile Design: Elements Of Mobile Design, Tools

UNIT V WEB INTERFACE DESIGN 9

Designing Web Interfaces – Drag & Drop, Direct Selection, Contextual Tools, Overlays, Inlays And Virtual Pages, Process Flow - Case Studies.

TEXT BOOK

1. Alan Dix, Janet Finlay, Gregory Abowd, Russell Beale, “Human Computer Interaction”, 3rd Edition, Pearson Education, 2004 (UNIT I, II &III)
2. Brian Fling, “Mobile Design And Development”, First Edition, O’Reilly Media Inc., 2009 (UNIT–IV)

COURSE OUTCOMES (COs)															
CO1	Apply effective dialog For Human Computer Interaction.														
CO2	Implement HCI for common individuals and persons with disabilities.														
CO3	Describe the importance of user feedback.														
CO4	Explain the HCI implications for designing multimedia/ ecommerce/ e-learning web sites.														
CO5	Design and develop appropriate user interface.														
CO6	Develop context based user experience models.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCIT603	DATA ANALYTICS	L	T	P	C
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Data Mining Techniques				
	Course Designed by:- Dr.A.Kumavel, Dept of Information Technology				
OBJECTIVES • To designing the tables and graphs that will be used to display the results before any numerical analysis is started can help focus the statisticalwork. • Tounderstandthecombinationofdepthsandtimestocomparebetweentreatments,and include in the tables or graphs, may be fixed by theobjectives.					

UNITI INTRODUCTION TO BIGDATA

8

Introduction to Big Data Platform – Challenges of Conventional Systems – Web Data – Evolution Of Analytic Scalability, Analytic Processes And Tools, Analysis Vs Reporting – Modern Data Analytic Tools, Statically Concepts: Sampling Distributions, Resampling, Statistical Inference, Prediction Error.

UNITII DATA ANALYSIS 12

Regression Modeling, Multivariate Analysis, Bayesian Modeling, Inference And Bayesian Networks, Support Vector And Kernel Methods, Analysis Of Time Series: Linear Systems Analysis, Nonlinear Dynamics – Rule Induction – Neural Networks: Learning And Generalization, Competitive Learning, Principal Component Analysis And Neural Networks; Fuzzy Logic: Extracting Fuzzy Models From Data, Fuzzy Decision Trees, Stochastic Search Methods.

UNITIII MININGDATA STREAMS 8

Introduction To Streams Concepts – Stream Data Model And Architecture – Stream Computing, Sampling Data In A Stream – Filtering Streams – Counting Distinct Elements In A Stream – Estimating Moments – Counting Oneness In A Window – Decaying Window – Real-time Analytics Platform(RTAP) Applications – Case Studies – Real Time Sentiment Analysis, Stock Market Predictions.

UNITIV FREQUENT ITEMSETSANDCLUSTERING 9

MiningFrequentItemsets–MarketBasedModel–AprioriAlgorithm–HandlingLargeData Sets InMain Memory – Limited Pass Algorithm – Counting Frequent Item sets In A Stream – Clustering Techniques – Hierarchical – K- Means – Clustering High Dimensional Data – CLIQUE And PROCLUS – Frequent Pattern Based Clustering Methods – Clustering In Non-Euclidean Space – Clustering For Streams AndParallelism.

UNITV FRAMEWORKSAND VISUALIZATION 9

MapReduce–Hadoop,Hive,MapR–Sharding–NoSQLDatabases–S3–HadoopDistributed File Systems – Visualizations – Visual Data Analysis Techniques, Interaction Techniques; Systems and Applications

TEXT BOOKS:

1. Michael Berthold, David J. Hand, Intelligent Data Analysis, Springer, 2007.
2. Anand Rajaraman And Jeffrey David Ullman, Mining Of Massive Datasets,Cambridge University Press,2012.

3. Jiawei Han, Micheline Kamber “Data Mining Concepts And Techniques”, Second Edition, Elsevier, Reprinted2008.

COURSE OUTCOMES (COs)	
CO1	Understand the concepts of Big Data framework.
CO2	Apply different ways of Data Analysis.
CO3	Apply stream data model.
CO4	Implement different data mining techniques.
CO5	Understand the technologies Map Reduce-Hadoop, MapR, Hive,NoSQL for big data analytics
CO6	Demonstrate visualization techniques.

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
COs\ POs	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03

U18PCIT6L1	DATA ANALYTICS LAB	L	T	P	C
	Total Contact Periods:45	0	0	3	1.5
	Prerequisite – Data mining techniques				
	Course Designed by:- Dr.A.Kumarvel, Dept of Information Technology				
OBJECTIVES • To learn the probability distributions and density estimations to perform analysis of various kinds of data. • To explore the statistical analysis techniques using Python and R programming languages.					

LIST OF EXPERIMENTS:

1. Install, Configure and Run Hadoop And Hdfs
2. Implement Word Count / Frequency Programs Using Mapreduce
3. Implement a Mr Program That Processes a Weather Dataset
4. Implement Linear and Logistic Regression
5. Implement Svm / Decision Tree Classification Techniques
6. Implement Clustering Techniques
7. Visualize Data Using Any Plotting Framework
8. Implement an Application That Stores Big Data In Hbase / MongoDB / Pig Using Hadoop

REFERENCES:

2. Glenn J. Myatt, Making Sense Of Data, John Wiley & Sons, 2007
Pete Warden, Big Data Glossary, O'Reilly, 2011.

COURSE OUTCOMES (COs)	
CO1	Understand single node and multi-node Hadoop Clusters
CO2	Develop Map Reduce programs.
CO3	Implement different data modeling techniques.
CO4	Implement different data mining techniques.
CO5	Experiment the data using plotting framework.
CO6	Demonstrate and execute application tools-Hbase, MongoDB, PIG.

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PCIT6L2	GRID AND CLOUD COMPUTING LAB	L	T	P	C
	Total Contact Periods:45	0	0	3	1.5
	Prerequisite – Distributed System				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES • To exposed tool kits for grid and cloudeenvironment. • To familiar with developing web services/applications in gridframework • To learn the run virtual machines of differentconfiguration. • To learn to usehadoop					

LIST OF EXPERIMENTS:

1. Develop a new Web Service forCalculator.
2. Develop new OGSA-compliant Web Service.
3. Using Apache Axis develop a GridService.
4. Develop applications using Java or C/C++ GridAPIs
5. Develop secured applications using basic security mechanisms available in Globus Toolkit.
6. Develop a Grid portal, where user can submit a job and get the result. Implement it with and without GRAMconcept.

COURSE OUTCOMES (COs)															
CO1	Develop anew Web Service for Calculator.														
CO2	Execute New OGSA-Compliant Web Service.														
CO3	Use Apache Axis and develop a Grid Service.														
CO4	Demonstrate Applications using Java Or C/C++ Grid APIs														
CO5	Develop Secured Applications using Basic Security Mechanisms available In Globus Toolkit.														
CO6	Implement a Grid Portal, where user can submit a job and get the result. Implement it with and without GRAM Concept.

U18EEIT6L3	SOFT SKILL	L	T	P	C
	Total Contact Periods:30	0	0	2	1
	Prerequisite – English				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
• To develop inter personal skills and be an effective goal oriented teamplayer. • To develop professionals with idealistic, practical and moral values. • To develop communication and problem solving skills.					
• To re-engineer attitude and understand its influence on behavior.					

UNIT I SELF ANALYSIS **4**
SWOT Analysis, Who am I, Attributes, Importance of Self Confidence, Self Esteem.

UNIT II CREATIVITY **8**
Out of box thinking, Lateral Thinking

UNIT III ATTITUDE **6**
Factors influencing Attitude, Challenges and lessons from Attitude, Etiquette

UNIT IV MOTIVATION **4**
Factors of motivation, self talk, Intrinsic & Extrinsic Motivators.

UNIT V GOAL SETTING **8**
Wish List, SMART Goals, Blue print for success, Short Term, Long Term, Life Time Goals, Time Management Value of time, Diagnosing Time Management, Weekly Planner to do list, Prioritizing work. Extempore

TEXT BOOK:

1. SOFT SKILLS, 2015, Career Development Centre, Green Pearl Publications.

4. Daniel Coleman, Emotional Intelligence, Bantam Book, 2006

COURSE OUTCOMES (COs)

CO1	Develop inter personal skills and be an effective goal oriented team player.														
CO2	Communicate effectively through verbal/oral communication, creative thinking and improve the listening skills.														
CO3	Write precise briefs or reports and technical documents.														
CO4	Participate in group discussion / meetings / interviews and prepare & deliver presentations														
CO5	Set goals to become an effective individual, self-motivation.														
CO6	Gain the knowledge of team work; develop Inter-personal relationships, conflict management and leadership quality.

18PCIT701	WIRELESS NETWORKS	L	T	P	C
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Computer Networks				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES • To Study about Wireless Networks, Protocol Stack andStandards. • To Study about Fundamentals of 3G Services, Its Protocols andApplications. • To Study about Evolution of 4G Networks, Its Architecture andApplications.					

UNIT-I WIRELESS LAN 9
 Introduction-WLAN Technologies: Infrared, UHF Narrowband, Spread Spectrum - IEEE802.11: System Architecture, Protocol Architecture, Physical Layer, MAC Layer, 802.11b, 802.11a-HiperLAN: WATM, BRAN, HiperLAN2-Bluetooth: Architecture, Radio Layer, Baseband Layer, Link Manager Protocol, Security – IEEE802.16-WIMAX: Physical Layer, MAC, Spectrum Allocation For WIMAX

UNIT II MOBILE NETWORK LAYER 9
 Introduction-Mobile IP: IP Packet Delivery, Agent Discovery, Tunneling And Encapsulation, IPV6-Network Layer In The Internet- Mobile IP Session Initiation Protocol – Mobile Ad-Hoc Network: Routing, Destination Sequence Distance Vector, Dynamic Source Routing

UNIT III MOBILE TRANSPORT LAYER 9
 TCP Enhancements For Wireless Protocols – Traditional TCP: Congestion Control, Fast Retransmit/Fast Recovery, Implications Of Mobility – Classical TCP Improvements: Indirect

TCP, Snooping TCP, Mobile TCP, Time Out Freezing, Selective Retransmission, Transaction Oriented TCP – TCP Over 3G Wireless Networks.

UNIT IV WIRELESS WIDEAREANETWORK

9

Overview Of UTMS Terrestrial Radio Access Network-UMTS Core Network Architecture: 3G-MSC, 3G-SGSN, 3G-GGSN, SMS-GMSC/SMS-IW MSC, Firewall, DNS/DHCP-High Speed Downlink Packet Access (HSDPA)- LTE Network Architecture And Protocol.

UNIT V 4G NETWORKS

9

Introduction – 4G Vision – 4G Features And Challenges – Applications Of 4G – 4G Technologies: Multicarrier Modulation, Smart Antenna Techniques, OFDM-MIMO Systems, Adaptive Modulation And Coding With Time Slot Scheduler, Cognitive Radio.

TEXT BOOKS:

1. Jochen Schiller, "Mobile Communications", Second Edition, Pearson Education 2012.(Unit I, II, III)
2. Vijay Garg, "Wireless Communications And Networking", First Edition, Elsevier 2007.(Unit IV, V)

3. Simon Haykin, Michael Moher, David Koilpillai, "Modern Wireless Communications", First Edition, Pearson Education 2013.

COURSE OUTCOMES (COs)															
CO1	Understand the various protocols and standards of wireless communications.														
CO2	Describe about the different wireless WAN architectures.														
CO3	Describe the protocols for mobile network layer and routing in mobile ad-hoc network.														
CO4	Illustrate the TCP enhancementsin mobile transport layer for wireless protocols.														
CO5	Demonstrate the latest 3G/4G And Wi-MAX networks and its architecture.														
CO6	Explain the 4G technologies and its applications.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
COs\ POs	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03

Category	Professional Core (PC)														
Approval	48th meeting of the Academic Council														

U18PEIT011	COMPUTER VISION	L	T	P	C
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Matrix Manipulations				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
• To review image processing techniques for computervision. • To understand shape and region analysis. • To understand Hough Transform and its applications to detect lines, circles,ellipses • To understand three-dimensional image analysis techniques and motionanalysis • To study some applications of computer visionalgorithms					

UNIT I IMAGE PROCESSING FOUNDATIONS

Review of image processing techniques – classical filtering operations – thresholding techniques – edge detection techniques – corner and interest point detection – mathematical morphology – texture.

UNIT II SHAPES AND REGIONS

Binary shape analysis – connectedness – object labeling and counting – size filtering – distance functions – skeletons and thinning – deformable shape analysis – boundary tracking procedures – active contours – shape models and shape recognition – centroidal profiles – handling occlusion – boundary length measures – boundary descriptors – chain codes – Fourier descriptors – region descriptors – moments.

UNIT III HOUGH TRANSFORM

Line detection – Hough Transform (HT) for line detection – foot-of-normal method – line localization – line fitting – RANSAC for straight line detection – HT based circular object detection – accurate center location – speed problem – ellipse detection – Case study: Human Iris location – hole detection – generalized Hough Transform (GHT) – spatial matched filtering – GHT for ellipse detection – object location – GHT for feature collation.

UNIT IV 3D VISION AND MOTION

Methods for 3D vision – projection schemes – shape from shading – photometric stereo – shape from texture – shape from focus – active range finding – surface representations – point-based representation – volumetric representations – 3D object recognition – 3D reconstruction – introduction to motion – triangulation – bundle adjustment – translational alignment – parametric motion – spline-based motion – optical flow – layered motion.

UNIT V APPLICATIONS

Application: Photo album – Face detection – Face recognition – Eigen faces – Active appearance and 3D shape models of faces Application: Surveillance – foreground-background separation – particle filters – Chamfer matching, tracking, and occlusion – combining views from multiple cameras – human gait analysis Application: In-vehicle vision system: locating roadway – road markings – identifying road signs – locating pedestrians.

U18PEIT012	ADHOC AND SENSOR NETWORK	L	T	P	C
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Computer Network				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES The student should be made to: • Understand the design issues in ad hoc and sensornetworks. • Learn the different types of MACprotocols. • Be familiar with different types of adhoc routingprotocols. • Be exposed to the TCP issues in adhocnetworks. • Learn the architecture and protocols of wireless sensornetworks.					

UNITI INTRODUCTION

9

Fundamentals of Wireless Communication Technology – The Electromagnetic Spectrum – Radio propagation Mechanisms – Characteristics of the Wireless Channel -mobile ad hoc networks (MANETs) and wireless sensor networks (WSNs) :concepts and architectures. Applications of Ad Hoc and Sensor networks. Design Challenges in Ad hoc and Sensor Networks.

UNITII MAC PROTOCOLS FOR AD HOCWIRELESSNETWORKS

9

Issues in designing a MAC Protocol- Classification of MAC Protocols- Contention based protocols- Contention based protocols with Reservation Mechanisms- Contention based protocols with Scheduling Mechanisms – Multi channel MAC-IEEE 802.11

UNIT III ROUTING PROTOCOLS AND TRANSPORT LAYER IN AD HOC WIRELESSNETWORKS

9

Issues in designing a routing and Transport Layer protocol for Ad hoc networks- proactive routing, reactive routing (on-demand), hybrid routing- Classification of Transport Layer solutions-TCP over Ad hoc wireless Networks.

UNITIV WIRELESSSENSORNETWORKS(WSNS)ANDMACPROTOCOLS9

Singlenodearchitecture:hardwareandsoftwarecomponentsofasensornode-WSNNetwork architecture:typicalnetworkarchitectures-datarelayingandaggregationstrategies-MAClayer protocols: self-organizing, Hybrid TDMA/FDMA and CSMA based MAC- IEEE802.15.4.

UNITV WSN ROUTING, LOCALIZATION&QOS

9

Issues in WSN routing – OLSR- Localization – Indoor and Sensor Network Localization- absolute and relative localization, triangulation-QOS in WSN-Energy Efficient Design- Synchronization-Transport Layer issues.

TEXT BOOK: 1. C. Siva Ram Murthy, and B. S. Manoj, "Ad Hoc Wireless Networks: Architectures and Protocols ", Prentice Hall Professional Technical Reference, 2008.

COURSE OUTCOMES (COs)															
CO1	Describe the concept of network architectures and applications of adhoc and wireless sensor networks.														
CO2	Learn the different types of MAC protocols for adhoc wireless networks.														
CO3	Design routing protocols for adhoc wireless networks considering protocol design issues.														
CO4	Explain the architecture and routing concepts in Wireless Sensor Networks.														
CO5	Understand about MAC protocols for Wireless Sensor Networks.														
CO6	Illustrate the issues of routing in Wireless Sensor Networks and evaluate the QoS related performance measurements.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

Category	Professional Core (PC)														
Approval	49th meeting of the Academic Council														

U18PEIT013	OPTIMIZATION TECHNIQUES	L	T	P	C
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Mathematics				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
To Understand Ethical Issues, Environmental Impact And Acquire Management Skills					

UNITI LINEAR PROGRAMMING

9

Introduction – Formulation of Linear Programming Model-Graphical Solution–Solving LPP Using Simplex Algorithm – Revised Simplex Method.

UNITII ADVANCES IN LPP

9

Duality Theory - Dual Simplex Method – Sensitivity Analysis—Transportation Problems—Assignment Problems-Traveling Sales Man Problem -Data Envelopment Analysis

UNIT III NON LINEAR PROGRAMMING

9

Classification of Non Linear Programming – Lagrange Multiplier Method – Karush – Kuhn
Tucker Conditions–Reduced Gradient Algorithms–Quadratic Programming Method – Penalty
and Barrier Method

UNITIV INTERIOR POINT METHODS

9

Karmarkar's Algorithm–Projection Scaling Method–Dual Affine Algorithm–Primal Affine Algorithm Barrier Algorithm.

UNITY DYNAMICPROGRAMMING

9

Formulation of Multi Stage Decision Problem–Characteristics–Concept Of Sub-Optimization And The Principle Of Optimality–Formulation Of Dynamic Programming–Backward And Forward Recursion– Computational Procedure–Conversion of final Value Problem In To Initial Value Problem.

COURSE OUTCOMES (COs)															
CO1	Understand the basic concepts of linear programming														
CO2	Learn the advancements in linear programmingtechniques														
CO3	Describe the different non-linear programming techniques														
CO4	Apply interior point methods to solve linear and non-linear convex optimization problems														
CO5	Formulate multistage decision problem and dynamic programming.														
CO6	Apply optimization techniques for real time problems..														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT014	VISUAL ANALYTICS	L	T	P	C
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Data Mining Techniques				
	Course Designed by:- Dept of Information Technology				

OBJECTIVES

1. To understand how accurately represent voluminous complex data set in web and from other datasources
2. To design and use various methodologies present in data visualization methodologies used for visualizing large datasets
3. To understand the process involved in data visualization and security aspects involved in data visualization
4. Implement the process involved and security issues present in data visualization

UNIT I INTRODUCTION**9**

Context of data visualization – Definition, Methodology, Visualization design objectives. Key Factors – Purpose- visualization function and tone- visualization design options – Data representation- Data Presentation- Seven stages of data visualization- widgets- data visualization tools.

UNIT II VISUALIZING DATA METHODS**9**

Mapping - Time series - Connections and correlations – Scatter plot maps - Trees, Hierarchies and Recursion - Networks and Graphs- Infographics

UNIT III VISUALIZING DATA PROCESS**9**

Acquiring data - Where to Find Data - Tools for Acquiring Data from the Internet- Locating Files for Use with Processing- Loading Text Data- Dealing with Files and Folders- Listing Files in a Folder - Asynchronous Image Downloads- Advanced Web Techniques- Using a Database-Dealing with a Large Number of Files. Parsing data - Levels of Effort, Tools for Gathering Clues- Text Is Best- Text Markup Languages- Regular Expressions (regexps)- Grammars and BNF Notation- Compressed Data- Vectors and Geometry- Binary Data Formats- Advanced Detective Work.

UNIT IV INTERACTIVE DATA VISUALIZATION**9**

Drawing with data – Scales – Axes – Updates- Transition and Motion – Interactivity - Layouts – Geo mapping – Exporting, Framework – T3- js-tablo.

UNIT V SECURITY DATA VISUALIZATION**9**

Port scan visualization - Vulnerability assessment and exploitation - Firewall log visualization - Intrusion detection log visualization - Attacking and defending visualization systems - Creating security visualization system.

TEXT BOOK:

1. Scott Murray, “Interactive data visualization for the web”, O’Reilly Media, Inc., 2013.
2. Ben Fry, “Visualizing Data”, O’Reilly Media, Inc., 2007.

REFERENCES:

1. Greg Conti, “Security Data Visualization: Graphical Techniques for Network Analysis”, No Starch Press Inc, 2007.

COURSE OUTCOMES (COs)	
CO1	Understand the purpose of visualization in general and visual analytics in particular
CO2	Describe the collection of visualization and analysis techniques
CO3	Explain the concepts and techniques for visualizing data process

CO4	Develop applications using interactive data visualization tools														
CO5	The Students will be able to understand the techniques for Attacking and defending visualization systems														
CO6	Identifying the vulnerabilities and attacks and thus create security visualization system.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
Cos\ Pos	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03

U18PEIT015	HEALTH INFORMATICS	L	T	P	C
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Mastery of a high-level programming language such as C++ or Java				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES To learn about the historical information of hospitality and recent trends in the Hospital information system.					

UNIT-I BIOMEDICAL INFORMATION SYSTEM 9

Historical Highlights of health care information system-Biomedical information system-problems and pitfalls-History and evolution of Electronic resources, Multimedia components

UNIT-II OVERVIEW OF COMPUTER HARDWARE 9

Motherboard and its logic-Memory and I/O interfacing/memory and input output mapping-I/O peripherals and Add-on cards.

UNIT-III HOSPITAL INFORMATION SYSTEM 9

Concept of HIS its position in hospital-introduction of a computerized HIS Automation of medical record-cost and Benefits of HIS-Modems and Networking in Hospitals.

UNIT-IV VISUAL PROGRAMMING AND MULTIMEDIA INFORMATION 9

Visual Basic Principles and Programming-Design, Production and Testing of Multimedia based HIS.

UNIT-IV INTEGRATED MEDICAL INFORMATION SYSTEM 9

Integration of inter and intra hospital information system. Role of expert systems-web based Multimedia information system-Video-conferencing-PowerPoint Presentation.

TEXT BOOK:

1. R.D.Lele “Computer in Medicine” Tata McGraw Hill, Newyork,1999.

REFERENCES:

1. S.K.Chauhan “PC Organisation”, S.K.Kataria and Sons, Delhi2000.
2. Harold Sackamn “Bio Medical Information Technology”, Academic Press,Newyork.

COURSE OUTCOMES (COs)															
CO1	Gain Knowledge about the historical highlights of health care and biomedical information system.														
CO2	Describe the overview of computerhardware used in the health care Information system														
CO3	Learn about the concept of hospital Information system and automating the medical records.														
CO4	Develop skills in the concepts of visual programming.														
CO5	Design and test the web based multimedia based health care information system														
CO6	Acquire the skills for integrating inter and intra hospital information system.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT016	SOFTWARE TESTING	L	T	P	C
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Software Engineering				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
ToLearnthedesigntestcasesandto befamiliarwithtestmanagementandtestautomation techniques.					

UNIT I INTRODUCTION

9

TestingasanEngineeringActivity–TestingasaProcess–Testingaxioms–Basicdefinitions – SoftwareTestingPrinciples–TheTester’sRoleinaSoftwareDevelopmentOrganization– OriginsofDefects–Costofdefects–DefectClasses–TheDefectRepositoryandTestDesign – Defect Examples – Developer/Tester Support of Developing a Defect Repository – Defect Preventionstrategies.

UNIT II TESTCASEDESIGN

9

Test case Design Strategies – Using Black Bod Approach to Test Case Design – Random Testing – Requirements based testing – Boundary Value Analysis – Equivalence Class Partitioning – State-based testing – Cause-effect graphing – Compatibility testing – user documentation testing – domain testing – Using White Box Approach to Test design – Test

Adequacy Criteria – static testing vs. structural testing – code functional testing – Coverage and Control Flow Graphs – Covering Code Logic – Paths – code complexity testing – Evaluating Test Adequacy Criteria.

UNIT III LEVELS OF TESTING 9

The need for Levers of Testing – Unit Test – Unit Test Planning – Designing the Unit Tests – The Test Harness – Running the Unit tests and Recording results – Integration tests – Designing Integration Tests – Integration Test Planning – Scenario testing – Defect bash elimination System Testing – Acceptance testing – Performance testing – Regression Testing – Internationalization testing – Ad-hoc testing – Alpha, Beta Tests – Testing OO systems – Usability and Accessibility testing – Configuration testing – Compatibility testing – Testing the documentation – Website testing.

UNIT IV TEST MANAGEMENT 9

People and organizational issues in testing – Organization structures for testing teams – testing services – Test Planning – Test Plan Components – Test Plan Attachments – Locating Test Items – test management – test process – Reporting Test Results – The role of three groups in Test Planning and Policy Development – Introducing the test specialist – Skills needed by a test specialist – Building a Testing Group.

UNIT V TEST AUTOMATION 9

Software test automation – skill needed for automation – scope of automation – design and architecture for automation – requirements for a test tool – challenges in automation – Test metrics and measurements – project, progress and productivity metrics.

TEXT BOOKS:

1. Srinivasan Desikan And Gopalaswamy Ramesh, “Software Testing – Principles And Practices”, Pearson Education, 2006.
2. Ron Patton, “Software Testing”, Second Edition, Sams Publishing, Pearson Education, 2007.

4. Aditya P. Mathur, “Foundations Of Software Testing _ Fundamental Algorithms And Techniques”, Dorling Kindersley (India) Pvt. Ltd., Pearson Education, 2008.

COURSE OUTCOMES (Cos)	
CO1	Design test cases suitable for a software development for different domains.
CO2	Apply different test case design strategies.
CO3	Execute various levels of testing.
CO4	Document the test design, test plan, test reports and project management.
CO5	Acquire the skills required for a test specialist.
CO6	Describe the concepts of software test automation, test metrics and measurements.

Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT021	HIGH SPEED NETWORKS	L	T	P	C
	Total Contact Periods:45	3	0	0	3
	Prerequisite – Computer Networks				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
- Students will be provided with an up-to-date survey of developments in High Speed Networks. - Enable the students to know techniques involved to support real-time traffic and congestion control. - Students will be provided with different levels of quality of service (Q.S) to different applications.					

UNIT1 HIGH SPEED NETWORKS

9

Frame Relay Networks - Asynchronous transfer mode - ATM Protocol Architecture, ATM logical Connection, ATM Cell - ATM Service Categories - AAL. High Speed LAN's: Fast Ethernet, Gigabit Ethernet, Fibre Channel - Wireless LAN's: applications, requirements - Architecture of 802.11

UNIT2 CONGESTION AND TRAFFIC MANAGEMENT

9

Queuing Analysis - Queuing Models - Single Server Queues - Effects of Congestion - Congestion Control-Traffic Management-Congestion Control in Packet Switching Networks - Frame Relay Congestion Control.

UNIT3 TCP AND ATM CONGESTION CONTROL

9

TCP Flow control - TCP Congestion Control - Retransmission - Timer Management - Exponential RTT backoff-KARN's Algorithm-Window management-Performance of TCP over ATM. Traffic and Congestion control in ATM - Requirements - Attributes - Traffic Management Framework, Traffic Control-ABR traffic Management-ABR rate control, RM cell formats, ABR Capacity allocations - GFR traffic management.

UNIT4 INTEGRATED AND DIFFERENTIATED SERVICES

9

Integrated Services Architecture-Approach, Components, Services-Queuing Discipline, FQ, PS, BRFQ, GPS, WFQ - Random Early Detection, Differentiated Services.

UNIT5 PROTOCOLS FOR QoS SUPPORT RSVP

9

Goals & Characteristics, Data Flow, RSVP operations, Protocol Mechanisms - Multiprotocol Label Switching - Operations, Label Stacking, Protocol details - RTP - Protocol Architecture,

Data Transfer Protocol, RTCP.

TEXTBOOK

1. William Stallings, "High Speed Networks And Internet", Pearson Education, Second Edition, 2002. [Chapter - 4-6, 8, 10, 12, 13,17,18]

REFERENCE BOOKS

1. Irvan Pepelnjk, Jim Guichard and Jeff Apcar, "MPLS and VPN architecture", Cisco Press, Volume 1 and 2,2003

COURSE OUTCOMES (COs)															
CO1	Understand the basic concepts of asynchronous transfer mode and wireless LAN														
CO2	Analyze the concept of congestion control and traffic management.														
CO3	Study about TCP and ATM congestion control														
CO4	Understand techniques involved to support real-time traffic and congestion control.														
CO5	Understand different levels of Quality of Service (QoS) to different applications.														
CO6	Implement protocols for QoS Support RSVP														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
Cos\ Pos	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03

U18PEIT022	NATURAL LANGUAGE PROCESSING	L	T	P	C
	Total Contact Periods - 45	3	0	0	3
	Prerequisite –NIL				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES This course is designed to introduce some of the problems and solutions of NLP, and their relation to linguistics and statistics.					

UNIT-I INTRODUCTION

9

Introduction - The issues and difficulties in natural language processing -Linguistics and computational linguistics - Language understanding and generation - Understanding of spoken, written and textual information.

UNIT-II PARSING AND GRAMMAR

9

Syntactic Parsing - English grammar - Structure of the sentence - words and organization of the lexicon - Context free and context sensitive grammar - Transformational grammar - The role of syntax analysis in semantics ATN's - Definite clause grammar and WASP parsers.

UNIT-III INTERPRETATION 9

Semantic interpretation - The conceptual dependency model for semantic representation - Semantic network - Frames and scripts - Semantics in the lexicon.

UNIT-IV SEMANTIC NETWORK 9

Discourse interpretation - The interconnections between pragmatics - Pragmatics in discourse analysis - Speech act plan-based Theory of speech acts - Semantic network - Frame and scripts - Semantics in the lexicon.

UNIT-V CASE STUDY 9

Generation - Strategies for generation - Planning English referring expressions - KING, a Natural language generation system. Typical systems - ELIZA - Baseball - GLJS - PARRY - LADDER - SOPHIE & POET current trends in NLP.

TEXTBOOK

1. James Allen Benjamin Cummings, "Natural language understanding", 2nd Edition 1995. Benjamin/Cummings Publishing Company.
2. Natural Language Processing by Elakumar, 2011

REFERENCE BOOK

1. Windgrad, "Language as a Cognitive Process; Syntax", Addison Wesley Publication.
2. F Popov, "Talking with Computer in Natural Language", Springer-Verlag, 1986.

COURSE OUTCOMES (COs)															
CO1	Outline Natural Language Processing tasks in syntax, semantics, and pragmatics.														
CO2	Explain Morphology and Part of Speech Tagging.														
CO3	Describe how syntax parsing techniques can be used.														
CO4	Explain the use of semantic analysis methods.														
CO5	Relate a few applications of Natural Language Processing.														
CO6	Simulate elementary case studies of NLP in Syntactical and Semantical Aspects														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
Cos\ Pos	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03

U18PEIT023	SOCIAL NETWORK ANALYSIS	L	T	P	C
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Computer networks and data mining				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
• To understand the concept of semantic web and related applications. • To learn knowledge representation using ontology. • To understand human behaviour in social web and related communities. • To learn visualization of social networks					

UNIT I INTRODUCTION

9

Introduction to Semantic Web: Limitations of current Web - Development of Semantic Web - Emergence of the Social Web - Social Network analysis: Development of Social Network Analysis - Key concepts and measures in network analysis - Electronic sources for network analysis: Electronic discussion networks, Blogs and online communities - Web-based networks - Applications of Social Network Analysis.

UNIT II MODELLING, AGGREGATING AND KNOWLEDGE REPRESENTATION

9

Ontology and their role in the Semantic Web: Ontology-based knowledge Representation - Ontology languages for the Semantic Web: Resource Description Framework - Web Ontology

Language - Modelling and aggregating social network data: State-of-the-art in network data representation - Ontological representation of social individuals - Ontological representation of social relationships - Aggregating and reasoning with social network data - Advanced representations.

UNIT III EXTRACTION AND MINING COMMUNITIES IN WEB SOCIAL NETWORKS

9

Extracting evolution of Web Community from a Series of Web Archive - Detecting communities in social networks - Definition of community - Evaluating communities - Methods for community detection and mining - Applications of community mining algorithms - Tools for detecting communities social network infrastructures and communities - Decentralized online social networks - Multi-Relational characterization of dynamic social network communities.

UNIT IV PREDICTING HUMAN BEHAVIOUR AND PRIVACY ISSUES

9

Understanding and predicting human behaviour for social communities - User data management - Inference and Distribution - Enabling new human experiences - Reality mining - Context-Awareness-Privacy in online social networks - Trust in online environment - Trust models based on subjective logic - Trust network analysis - Trust transitivity analysis - Combining trust and reputation - Trust derivation based on trust comparisons - Attacks spectrum and counter measures.

UNIT V VISUALIZATION AND APPLICATIONS OF SOCIAL NETWORKS

9

Graph theory - Centrality - Clustering - Node-Edge Diagrams - Matrix representation - Visualizing online social networks, Visualizing social networks with matrix-based representations - Matrix and Node-Link Diagrams - Hybrid representations - Applications - Cover networks - Community welfare - Collaboration networks - Co-Citation networks.

COURSE OUTCOMES (COs)															
CO1	Develop semantic web related applications.														
CO2	Represent knowledge using ontology.														
CO3	Extract and mine communities in web social networks														
CO4	Predict human behavior in social web and related communities														
CO5	Analyze the security issues and privacy policies in Social networks														
CO6	Visualize social networks in real time applications														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT024	BUSINESS ANALYTICS	L	T	P	C
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Data mining techniques				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
1. To understand the role of business analytics within an organization.					
2. To analyze data using statistical and data mining techniques and understand relationships between the underlying business processes of an organization.					
3. Use advanced analytical tools to analyze complex problems under uncertainty.					
4. Manage business processes using analytical and management tools.					

UNIT-I INTRODUCTION**9**

Introduction to Business Analytics - Business View of Information Technology Applications - Key purpose of using IT in Business - Characteristics of Internet Ready IT Applications - Information Users and their Requirements- Types of digital data - Introduction to OLTP and OLAP.

UNIT-II BUSINESS INTELLIGENCE**9**

Using Analytical Information for Decision Support - Definition and examples in business intelligence - Evolution of BI and Role of DSS- EIS- MIS and Digital Dashboards - BI Definition and Concepts - BI Component Framework - Purpose of BI - Business Intelligence Applications - BI Roles and Applications.

UNIT-III DATA MODELING**9**

Basic Data Integration - Data Warehouse -p Data Integration Technologies - Data Quality - Data Profiling-Multidimensional Data Modelling-Introduction-Data Modelling Techniques - Fact table - Dimension table - typical dimensional Models - Dimensional Modelling Life Cycle – Measure- Metrics and Performance Management.

UNIT-IV STATISTICS AND ALGORITHMS**9**

Basic of Enterprise Reporting-Understanding Statistics-Role of Statistics in Analytics-Data, Data Description and Summarization-Statistical Tests-Understanding Hypothesis and t-test- Correlation Analysis - Regression - The F-Test - Time Series analysis - Application of Analytics-Data Mining Algorithms-Association Rule Mining-k-Mean Clustering-Decision Tree.

UNIT-V CASE STUDIES**9**

Segmenting bank customer transaction histories - Association analysis of Web services data - Creating a simple credit risk model from consumer loan data - Predicting university enrolment management

TEXT BOOKS:

1. Fundamentals of Business Analytics, R.N. Prasad, Seema Acharys, 2nd Edition, Wiley India Pvt Ltd., 2016.
2. Business Analytics, James R. Evans, 2nd Edition, Pearson Education Limited- 12-Jan-2016

REFERENCES:

1. Business Analytics an Application focus, Purba Halady Rao PHI Learning Pvt. Ltd - 2013
2. Business Analytics: Data Analysis & Decision Making - Standalone , S. Christian Albright , Wayne L. Winston- Cengage Learning, Business & Economics-31-Mar-2016
3. Competing on Analytics: Updated, with a New Introduction: The New Science of Winning, Thomas H. Davenport, Jeanne G. Harris - Harvard Business Review Press, 2017.

COURSE OUTCOMES (COs)	
CO1	Understand the concept and role of analytics in business.
CO2	Use business intelligence to formulate and solve business problems and to support managerial decision making.
CO3	Describe the data integration and data modeling techniques.
CO4	Learn the concept of enterprise reporting, statistical techniques and data mining algorithms in analytics,

CO5	Implement analytics in real time applications-bank management,general management, marketing,finance,operationsandsupplychainmanagement.														
CO6	Apply analytic principles and techniques to a business problem														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
Cos\ Pos	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03

18PEIT025	MOBILE APPLICATION DEVELOPMENT	L	T	P	C
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – mobile communication				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
- To learn the characteristics of mobile applications. - To learn about the intricacies of UI required by mobile applications. - To study about the design aspects of mobile application.					

UNIT I INTRODUCTION 9
 Mobile Applications – Characteristics and Benefits – Application Model – Infrastructure and Managing Resources – Mobile Software Engineering – Frameworks and Tools – Mobile devices Profiles.

UNIT II USER INTERFACE 9
 Generic UI Development – VUIs and Mobile Applications – Text to Speech techniques – Designing the right UI – Multimodal and Multichannel UI – Gesture based UIs – Screen Elements and Layouts – Voice XML – Java API.

UNIT III APPLICATION DESIGN 9
 Memory Management – Design patterns for limited memory – Work flow for Application Development – Techniques for composing Applications – Dynamic Linking – Plug ins and rules of thumb for using DLLs – Concurrency and Resource Management – Look and feel.

UNIT IV APPLICATION DEVELOPMENT 9
 Intents and Services – Storing and Retrieving data – Communication via the Web – Notification and Alarms – Graphics and Multimedia – Telephony – Location based services – Packaging and Deployment – Security and Hacking.

UNIT V TOOLS 9
 Google Android Platform – Eclipse Simulator – Android Application Architecture – Event based programming – Apple iPhone Platform – UI tool kit interfaces – Event handling and Graphics services – Layer Animation.

TEXT BOOKS:

1. Share Conder, Lauren Darcey, "Android Wireless Application Development" Pearson 3rd Edition.
2. Zigurd Mednieks, Laird Dornin, G, Blake Meike and Masumi Nakamura,—Programming Androidll, O'Reilly,2011.

2. RetoMeier,WroxWiley,—ProfessionalAndroid2ApplicationDevelopmentll,2010.
3. Alasdair Allan, —iPhone Programmingll, O'Reilly,2010.

COURSE OUTCOMES (COs)															
CO1	Explain the features and challenges of mobile devices, native app development frameworks, hybrid app development frameworks														
CO2	Learn the intricacies of user interfaces and implement the user interfaces for mobileapplications.														
CO3	Design the mobile applications considering the resource constraints in mobile devices.														
CO4	Design a secure mobile application based on user requirements														
CO5	Select appropriate framework and tool for developing mobile applications based on the problem requirements														
CO6	Design and develop mobile applications for societal and environmental problems														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT026	WAVELET TRANSFORMS AND ITS APPLICATION	L	T	P	C
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – mobile communication				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
To in					
troduce the fundamentals concepts of wavelet transforms.					
o To study system design usingWavelets					

- To learn the different wavelet families & their applications.

UNIT I INTRODUCTION TO WAVELETS

9

Introduction to Multirate signal processing- Decimation and Interpolation, Quadrature Mirror Filters, Subband coding, Limitations of Fourier transform, Short time Fourier transform and its drawbacks, Continuous Wavelet transform, Time frequency representation, Wavelet System and its characteristics, Orthogonal and Orthonormal functions and function space

UNIT II MULTIREOLUTION CONCEPT AND DISCRETE WAVELET TRANSFORM

9

Multiresolution formulation of wavelet systems- signal spaces, scaling function, wavelet function and its properties, Multiresolution analysis, Haar scaling and wavelet function, Filter banks Analysis and Synthesis, 1D and 2D Discrete wavelet transform, Wavelet Packets, Tree structured filter bank, Multichannel filter bank, Undecimated wavelet transform.

UNIT III WAVELET SYSTEM DESIGN

9

Refinement relation for orthogonal wavelet systems, Restrictions on filter coefficients, Design of Daubechies orthogonal wavelet system coefficients, Design of Coiflet and Symlet wavelets.

UNIT IV WAVELET FAMILIES

9

Continuous Wavelets- Properties of Mexican hat wavelet, Morlet, Gaussian and Meyer wavelets. Orthogonal wavelets- Properties of Haar wavelets, Daubechies wavelets, Symlets, Coiflets and Discrete Meyer wavelets. Properties of Biorthogonal wavelets, Applications of wavelet families.

UNIT V WAVELET APPLICATIONS

9

Denoising of Signals and Images, Image enhancement, Edge detection, Image Fusion, Image compression, Wavelet based feature extraction, Analysis of phonocardiogram signals, Analysis of EEG signals, Speech enhancement for hearing aids

COURSE OUTCOMES (COs)	
CO1	Understand the basic concepts of wavelet and its types
CO2	Analyze multi resolution concepts and discrete wavelet transform.
CO3	Design the different wavelet system.

CO4	Describe the properties and applications of wavelet families.														
CO5	Analysis of phonocardiogram signals, EEG signals, Speech enhancement for hearing aids and de-noising technique.														
CO6	Implement wavelet applications in real time.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

18PEIT031	CYBERFORENSICS	L	T	P	C
	Total Contact Periods - 45	3	0	0	3
	Prerequisite –Computer Networks				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
- To learn computer forensics - To become familiar with forensics tools - To learn to analyze and validate forensics data					

UNIT I INTRODUCTION TO COMPUTER FORENSICS 9

Introduction to Traditional Computer Crime, Traditional problems associated with Computer Crime. Introduction to Identity Theft & Identity Fraud. Types of CF techniques - Incident and incident response methodology - Forensic duplication and investigation. Preparation for IR: Creating response tool kit and IR team. - Forensics Technology and Systems - Understanding Computer Investigation – Data Acquisition.

UNIT II EVIDENCE COLLECTION AND FORENSIC TOOLS 9

Processing Crime and Incident Scenes – Working with Windows and DOS Systems. Current Computer Forensics Tools: Software/ Hardware Tools.

UNIT III ANALYSIS AND VALIDATION 9

Validating Forensics Data – Data Hiding Techniques – Performing Remote Acquisition – Network Forensics – Email Investigations – Cell Phone and Mobile Devices Forensics

UNIT IV ETHICAL HACKING 9

Introduction to Ethical Hacking - Footprinting and Reconnaissance - Scanning Networks - Enumeration - System Hacking - Malware Threats - Sniffing

UNIT V ETHICAL HACKING IN WEB 9

Social Engineering - Denial of Service - Session Hijacking - Hacking Web servers - Hacking Web Applications – SQL Injection - Hacking Wireless Networks - Hacking Mobile Platforms.

TEXT BOOKS:

1. Bill Nelson, Amelia Phillips, Frank Enfinger, Christopher Steuart, —Computer Forensics and Investigations, Cengage Learning, India Edition, 2016.
2. CEH official Certified Ethical Hacking Review Guide, Wiley India Edition, 2015.

3. Ankit Fadia — Ethical Hacking Second Edition, Macmillan India Ltd, 2006

COURSE OUTCOMES (COs)															
CO1	Explain computer forensics and its techniques														
CO2	Learn about evidence collection and applying forensic tools for crime investigations.														
CO3	Analyze and validate forensics data.														
CO4	Explore the fundamentals of ethical hacking														
CO5	Execute penetration technique using standard hacking tools in an ethical manner														
CO6	Learn about reconnaissance, protocols, windows hacking, hacking web technologies, wireless networks and mobile platforms														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT033	APPLICATIONS OF DATAMINING	L	T	P	C
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Data Warehousing and Data mining Techniques				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
• To learn how to prepare, process, understand, analyze and present the data. • To analyze the problem and Implement different techniques. • To Evaluate and Refine them for analyze the problem. • To implement data mining tools such as R/Weka					

Introduction to Data and Big Data -Data Types and Data Qualities - Sampling, Sample Sets and Data Population - Statistical Inference and Introduction to Supervised and Unsupervised Learning method - Data Mining Goals - Stages of the Data Mining Process - Data Mining Techniques - Introduction to Data Mining Tools - R and WEKA

UNIT-II DATA MINING KNOWLEDGE REPRESENTATION 9

Task relevant data- Background knowledge -Interestingness measure-Representing input data and output knowledge - Data Visualization- Basic concepts - Visualization techniques - Experiments with Weka/R using visualization- Attribute-oriented analysis -Attribute generalization-Attributerelevance-Classcomparison-Statisticalmeasures-Experimentswith Weka / R using filters andstatistics

UNIT-III CLASSIFICATION 9

Basic learning/mining tasks - Inferring rudimentary rules: 1R algorithm - Covering rules - Introduction to Decision Trees -Rule Based Classifier - Experiments with Weka/R using decision trees, rules -The predictiontask - Statistical (Bayesian) classification - Bayesian networks -Instance-based methods (nearest neighbor)-Linear models -Experiments with Weka/R usingPrediction

UNIT-IV CLUSTERING ANALYSIS 9

Clustering Analysis - Basic issues in clustering - conceptual clustering system: Cluster/2 - Partitioning methods: k-means, expectation maximization (EM) - Hierarchical methods: distance-based agglomerative and divisible clustering - Conceptual clustering: Cobweb - Experiments with Weka/R using k-means, EM, Cobweb -Association rules - Generating item sets and rules efficiently-Correlation analysis -Experiments with Weka/R - miningassociation rules

UNIT-V CASE STUDY 9

Training and testing - Estimating classifier accuracy (holdout, cross-validation, leave-one-out) - Combining multiple models (bagging, boosting, stacking) - Experiments with Weka/R for training and testing- Mining Real data - Preprocessing data -Applying various data mining techniques to create a comprehensive and accurate model of the data -Text mining: extracting attributes (keywords), structural approaches (parsing, softparsing).

COURSE OUTCOMES (COs)

CO1	Understand different data mining tasks and the functionalities of Weka/R tools.
-----	---

CO2	Explain knowledge representation and metrics.														
CO3	Understand and implement the different Classification techniques.														
CO4	Demonstrate and implement unsupervised learning techniques.														
CO5	Understand ensemble models.														
CO6	Demonstrate case studies for analyzing the performance of the data models.

U18PEIT032	VIRTUAL AND AUGMENTED REALITY	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – CISB110(C/C++), CISB210(Data Structure), COIS712/ CISB355(CG)				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
- To learn Virtual reality; multiple modal interaction, visual-auditory-haptic, interaction immersion - To learn imagination, visual computation and environmental modeling; geometric behavior and physically basedsimulation - To understand the management of large scale environment, VR development tools, augmented reality, mixed reality, digitalentertainment.					

UNIT- 1 Introduction of Virtual Reality **9**
Fundamental Concept and Components of Virtual Reality Primary Features and Present Development on Virtual Reality

UNIT- II Multiple Modals of Input and Output Interface in Virtual Reality **9**
Input -- Tracker, Sensor, Digital Glove, Movement Capture, Video-based Input, 3D Menus & 3D Scanner etc. Output -- Visual / Auditory / Haptic Devices

UNIT- III Visual Computation in Virtual Reality **9**
Fundamentals of Computer Graphics Software and Hardware Technology on Stereoscopic Display Advanced Techniques in CG: Management of Large Scale Environments & Real Time Rendering

UNIT- IV Environment Modeling in Virtual Reality **9**
Geometric Modeling, Behavior Simulation, Physically Based Simulation Interactive Techniques in Virtual Reality: Body Track, Hand Gesture, 3D Manus, Object

UNIT- V Grasp Introduction of AugmentedReality (AR)**9**

System Structure of Augmented Reality Key Technology in AR Development Tools and Frameworks in Virtual Reality: Frameworks of Software Development Tools in VR. X3D Standard; Vega, MultiGen, Virtools etc

U18PEIT034	MACHINE LEARNING TECHNIQUES	L	T	P	C
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Artificial Intelligence and Expert System.				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
• To understand the concepts of machinelearning • To appreciate supervised and unsupervised learning and theirapplications • To understand the theoretical and practical aspects of Probabilistic GraphicalModels. • To understand probabilistic graphicalmodels. • To understand sample complexityanalysis.					

Machine Learning - Machine Learning Foundations –Overview – Design of a Learning system
 - Types of machine learning – Applications Mathematical foundations of machine learning –
 random variables and probabilities - Probability Theory – Probability distributions - Decision
 Theory- Bayes Decision Theory - Information Theory.

UNIT II SUPERVISED LEARNING 9

Linear Models for Regression - Linear Models for Classification - Naïve Bayes - Discriminant
 Functions - Probabilistic Generative Models - Probabilistic Discriminative Models - Bayesian
 Logistic Regression. Decision Trees - Classification Trees - Regression Trees - Pruning. Neural
 Networks - Feed-forward Network Functions - Back-propagation. Support vector machines -
 Ensemble methods - Bagging - Boosting.

UNIT III UNSUPERVISED LEARNING 9

Clustering - K-means - EM Algorithm - Mixtures of Gaussians. The Curse of Dimensionality -
 Dimensionality Reduction - Factor analysis - Principal Component Analysis - Probabilistic
 PCA - Independent components analysis.

UNIT IV PROBABILISTIC GRAPHICAL MODELS 9

Graphical Models - Undirected graphical models - Markov Random Fields - Directed
 Graphical Models - Bayesian Networks - Conditional independence properties - Inference –
 Learning - Generalization - Hidden Markov Models - Conditional random fields (CRFs)

UNIT V ADVANCED LEARNING 9

Sampling – Basic sampling methods – Monte Carlo - Reinforcement Learning – K - Armed
 Bandit - Elements - Model-Based Learning - Value Iteration - Policy Iteration. Temporal
 Difference Learning - Exploration Strategies - Deterministic and Non-deterministic Rewards
 and Actions Computational Learning Theory - Mistake bound analysis, sample complexity
 analysis - VC dimension. Occam learning - accuracy and confidence boosting

COURSE OUTCOMES (COs)	
CO1	Understand the fundamentals and concept of Machine learning.
CO2	Apply probabilistic techniques for real time application in uncertain environment.
CO3	Explain the concepts of supervised and unsupervised learning techniques.
CO4	Design and implement probabilistic graphical models in real time applications.
CO5	Use machine learning tools to implement typical clustering algorithms for different types of applications.
CO6	Explore the different advanced learning techniques.
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT035	BIO-INSPIRED COMPUTING	L	T	P	C
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Artificial Intelligence				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
• Learn evolutionary theory and algorithms • Understand Cellular Automata and artificial life • Learn artificial neural systems and related learning algorithms					

UNIT I EVOLUTIONARY AND CELLULAR SYSTEMS 9

Foundations of evolutionary theory – Genotype – artificial evolution – genetic representations – initial population – fitness functions – selection and reproduction – genetic operators – evolutionary measures – evolutionary algorithms – evolutionary electronics – evolutionary algorithm case study Cellular systems – cellular automata – modeling with cellular systems – other cellular systems – computation with cellular systems – artificial life – analysis and synthesis of cellular systems

UNIT II NEURAL SYSTEMS 9

Biological nervous systems – artificial neural networks – neuron models – architecture – signal encoding – synaptic plasticity – unsupervised learning – supervised learning – reinforcement learning – evolution of neural networks – hybrid neural systems – case study

UNIT III DEVELOPMENTAL AND IMMUNE SYSTEMS 9

Rewriting systems – synthesis of developmental systems – evolutionary rewriting systems – evolutionary developmental programs Biological immune systems – lessons for artificial immune systems – algorithms and applications – shape space – negative selection algorithm – clonal selection algorithm - examples

UNIT IV BEHAVIORAL SYSTEMS 9

Behavior is cognitive science – behavior in AI – behavior based robotics – biological inspiration for robots – robots as biological models – robot learning – evolution of behavioral systems – learning in behavioral systems – co-evolution of body and control – towards self reproduction – simulation and reality

UNIT V COLLECTIVE SYSTEMS 9

Biological self-organization – Particle Swarm Optimization (PSO) – ant colony optimization (ACO) – swarm robotics – co-evolutionary dynamics – artificial evolution of competing systems – artificial evolution of cooperation – case study

COURSE OUTCOMES (COs)															
CO1	Implement and apply evolutionary algorithms.														
CO2	Explain cellular automata and artificial life.														
CO3	Implement and apply neural systems.														
CO4	Explain developmental and artificial immune systems.														
CO5	Describe behavioral systems and to implement in collective intelligence systems.														
CO6	Design bio inspired solutions for real world problems.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT036	SOFTWARE CONFIGURATION MANAGEMENT	L	T	P	C
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – software Engineering				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES • To Introduce the basic concepts of software configurationmanagement • To learn the importance of SCM in softwaredevelopment • TounderstandthedifferentSCMphasesandactivities,branching,releasemanagement, configuration managementroles.					

UNIT1 INTRODUCTION 9
 Introduction to software configuration Management, SCM and Process Improvement, Measurements and Metrics – Benefits of SCM – Configuration Identification – Configuration Change control – Implementing SCM in the Organization – Project Management in CM Environment- Software Scope- Project Estimation – Risk Management Strategies.

UNITII THE DoD CM PROCESS MODEL 9
 114

CM Benefits, Risks, CM Life-Cycle Management and Planning- Relation to system engineering process – Implementing the CM process – measuring and Evaluating the CM process.

UNITIII CONFIGURATION IDENTIFICATION 9

Product structure – configuration items – configuration documentation – specification types – software requirement analysis and design – software architecture and design – software integration and qualification – configuration base line concept.

UNITIV CONFIGURATION CONTROL 9

The process of configuration control – Configuration status accounting – Typical CSA information over the acquisition program – Life cycle - Configuration status accounting process Evaluation.

UNITV CONFIGURATION VERIFICATIONAND AUDITING 9

Configuration identification – the effective documentation of the system – Methods and standards – Generating documentation – configuration verification and Audit – Concepts and principles – configuration verification – configuration audit – application of audits.

REFERENCES:

1. Enterprise Software Configuration Management Solutions for Distributed and System z, Paolo Cravino, David Lawrence, Antonio Alonso, López Brandt Onorato Zhenhua (Eric) Shen, January 2009

COURSE OUTCOMES (COs)															
CO1	Understand the concepts and principles of softwareconfiguration management.														
CO2	Explain about configuration Management and planning.														
CO3	Define the relation between software configuration management and the software development.														
CO4	Select configuration items at appropriate levels of the product structure														
CO5	Describe the configuration management activities like control, status accounting, auditing and verification.														
CO6	Implementtechnical Software Configuration Management System in real time.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT041	CLOUD COMPUTING AND SECURITY	L	T	P	C
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – software Engineering				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
• To understand the concept of cloudcomputing. • To appreciate the evolution of cloud from the existingsciences. • To have knowledge on the various issues in cloudcomputing. • To be familiar with the lead players incloud. • To appreciate the emergence of cloud as the next generation computingparadigm.					

UNIT I INTRODUCTION 9

Introduction to Cloud Computing – Definition of Cloud – Evolution of Cloud Computing – Underlying Principles of Parallel and Distributed Computing – Cloud Characteristics – Elasticity in Cloud – On-demand Provisioning.

UNIT II CLOUD ENABLING TECHNOLOGIES 10

Service Oriented Architecture – REST and Systems of Systems – Web Services – Publish-Subscribe Model – Basics of Virtualization – Types of Virtualization – Implementation Levels of Virtualization – Virtualization Structures – Tools and Mechanisms – Virtualization of CPU – Memory – I/O Devices – Virtualization Support and Disaster Recovery.

UNIT III CLOUD ARCHITECTURE, SERVICES AND STORAGE 8

Layered Cloud Architecture Design – NIST Cloud Computing Reference Architecture – Public, Private and Hybrid Clouds – IaaS – PaaS – SaaS – Architectural Design Challenges – Cloud Storage – Storage-as-a-Service – Advantages of Cloud Storage – Cloud Storage Providers – S3.

UNIT IV RESOURCE MANAGEMENT AND SECURITY IN CLOUD 10

Inter Cloud Resource Management – Resource Provisioning and Resource Provisioning Methods – Global Exchange of Cloud Resources – Security Overview – Cloud Security Challenges – Software-as-a-Service Security – Security Governance – Virtual Machine Security – IAM – Security Standards.

UNIT V CLOUD TECHNOLOGIES AND ADVANCEMENTS 8

Hadoop – MapReduce – Virtual Box – Google App Engine – Programming Environment for Google App Engine – Open Stack – Federation in the Cloud – Four Levels of Federation – Federated Services and Applications – Future of Federation.

U18PEIT042	MULTI AGENT SYSTEMS	L	T	P	C
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Artificial Intelligence				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
• Taxonomy of agent architectures, formal languages for multi-agent systems specification, languages and schemes for knowledge representation, formal languages					

and models for modeling of agent and environment behavior, agent communication languages and associated semantic models.

- Basic inter-agent interaction patterns and coordination of cooperative and antagonistic agents. Coordination techniques: organizational structure, contracting, multi-agent planning and negotiation.
- Application of multi-agent systems in computer and robot vision, decision support systems, electronic commerce, robotics, and simulation of societies.

UNIT-I INTRODUCTION 9

Intelligent Agents-Deductive reasoning Agents – Agents as theorem provers- Agent Oriented Programming - Concurrent Metate M- Practical Reasoning Agents

UNIT-II TYPES OF AGENTS 9

Reactive and Hybrid Agents - Brook's and Subsumption Architecture –The Limitations of Reactive Agents - Hybrid Agents. Communication - Speech Acts - Agent Communication Languages, Working Together - Cooperative Distributed Problem Solving - Task Sharing and Result Sharing Coordination – Multi agent Planning and Synchronization

UNIT-III MULTI-AGENT INTERACTIONS 9

Making group decisions- Co-operative games - Allocating scarce resources

UNIT-IV BARGAINING 9

Bargaining for resource division, task allocation and resource allocation - Arguing – Abstract, deductive, dialogue and implemented argumentation systems –Applications – Agents for different domains

UNIT-V JADE 9

Agent Oriented Language - The JADE Platform – Programming with JADE – Basic Features

REFERENCES:

U18PEIT043	MINING SOCIAL MEDIA	L	T	P	C
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Data Mining Techniques				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
• To use different tools for collecting, analyzing, and exploring social media data for research and development purposes. • To process the collected data, primarily structured using methods involving correlation, regression, and classification to derive insights about the sources and people who generated that data. • To apply best practices in Search Engine					

UNIT-I INTRODUCTION 9

What is Social Media Mining - New Challenges for Mining - Essentials - Graph Essentials- Graph Basics -Graph Representation p- Types of Graph - Connectivity in Graphs - Special Graphs - Graph Algorithms.

UNIT-II NETWORK MEASURES 9

Network Measures - Entity - Transitivity and Reciprocity - Balance and Status - Network Models - Properties of Real-World Networks - Random Graphs - Small-World Models - Preferential Attached Models - Data Mining Essentials - Data Pre-processing - Data mining Algorithms - Supervised Learning - Unsupervised Learning.

UNIT-III COMMUNITY AND INTERACTIONS 9

Community Analysis - Community Detection - Community Evolution - Community Evaluation - Information Diffusion in Social Media - Herd Behavior - Information Cascades - Diffusion of innovations - Epidemics.

UNIT-IV APPLICATIONS 9

Inference and Homophily - Measuring Assortativity - Influence - Homophily- Distinguishing Influence and Homophily - Recommendation in Social Media -Challenges - Classical Recommendation Algorithms - Recommendation Using Social Context - Evaluating Recommendation- Behavior Analytics Individual Behavior - collective Behavior.

UNIT-V CASE STUDY 9

Gathering social media data - Building social media networks - Analyzing network effects- Simulating network dispersion

TEXT BOOK

1. Social Media Mining: An Introduction, Reza Zafarinin, Mohammad Ali Abbasi, Huan Lui - April 2014.

REFERENCES:

1. Mining Text Data , Charu C. Aggarwal, ChengXiang Zhai, Springer2012.
2. Mastering Social Media Mining with Python, Macro Bonzanini, Packt publications July 2016.

COURSE OUTCOMES (COs)															
CO1	Utilize various Application Programming Interface (API) services to collect data from different social media sources such as YouTube, Twitter, and Flickr.														
CO2	Process the collected data, primarily structured using methods involving correlation, regression, and classification to derive insights about the sources and people who generated that data.														
CO3	Perform social network analysis to identify important socialactors,subgroups(i.e.,clusters),andnetworkpropertiesinsocialmediasites such as Twitter, Facebook, and YouTube.														
CO4	Apply best practices in Search Engine.														
CO5	Design ethical principles to the use of web and social media data.														
CO6	Build social networks														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT044	DIGITAL AND MEDICAL IMAGE PROCESSING	L	T	P	C
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Image processing				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
The aim of the course is to show how to extract, model, and analyze information from medical data and application in order to help diagnosis, treatment and monitoring of diseases through computer science.					

UNIT-I DIGITAL IMAGE FUNDAMENTAL 9
 Elements of digital image processing systems, Elements of Visual perception, Image formation model, Image sampling and quantization, aliasing, zooming and shrinking of digital images. Monochrome Vision Model, Colour Vision Model. Image transforms – Discrete Fourier transform, Properties of Fourier transform, Fast Fourier transform and inverse fast Fourier transform.

UNIT-II IMAGE FUNDAMENTALS 9
 Image sampling and quantization, Matrix and Singular Value representation of discrete images. Image pre-processing, point operation, Histogram modeling, spatial operations, transform operations.

UNIT-III IMAGE ENHANCEMENT 9
 Enhancement by point processing – Simple intensity transformation – Histogram processing – Image subtraction – Image averaging. Spatial filtering – Smoothing filters, sharpening filters. Enhancements in frequency domain – Low pass filtering – High pass filtering.

UNIT-IV IMAGE ANALYSIS, CLASSIFICATION AND RECONSTRUCTION OF ACT AND MRI IMAGES 9
 Image analysis, Spatial feature extraction, edge detection, Image segmentation. Image reconstruction from projections, Random transform, filter back projection algorithm, reconstruction of CT images, Imaging methods in MF images, fourier reconstruction of MRI.

UNIT-V TRANSMISSION OF MEDICAL IMAGES 9
 Medical Image, data compression of transmission, transform coding, pixel coding, predictive coding, Interference coding.

TEXT BOOKS:

1. Kavyan Najarian and Robert Splanter "Biomedical Signals and Image Processing", CRC – Taylor and Francis, New York, 1991.
2. John L. Semmlow, "Biosignal and Biomedical Image Processing Matlab Based applications" Marcel Dekker Inc., New York, 2004.

COURSE OUTCOMES (Cos)															
CO1	Acquire a fundamental knowledge of digital image processing with Fourier transforms.														
CO2	Learn about the image sampling, Modeling and quantization techniques.														
CO3	Explain the image enhancement, its process and types of filters used in image processing.														
CO4	Apply image analysis, classification and reconstruction techniques in images.														
CO5	Acquire the skills in the transmission of medical images.														
CO6	Design real time applications for processing medical images.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT045	MULTIMEDIA COMPRESSION TECHNIQUES	L	T	P	C
	Total Contact Hours – 45	3	0	0	3
	Prerequisite –NIL				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES The student should be made to: • Understand error–controlcoding. • Understand encoding and decoding of digital datastreams. • Be familiar with the methods for the generation of these codes and their decoding techniques. • Be aware of compression and decompressiontechniques. • Learn the concepts of multimediacommunication.					

UNIT I MULTIMEDIA COMPONENTS

Introduction - Multimedia skills - Multimedia components and their characteristics - Text, sound, images, graphics, animation, video, hardware.

UNIT II AUDIO AND VIDEO COMPRESSION

Audio compression-DPCM-Adaptive PCM –adaptive predictive coding-linear Predictive coding-code excited LPC-perpetual coding Video compression –principles-H.261-H.263-MPEG 1, 2, and 4.

UNIT III TEXT AND IMAGE COMPRESSION

Compression principles-source encoders and destination encoders-lossless and lossy compression- entropy encoding –source encoding -text compression – static Huffman coding dynamic coding – arithmetic coding –Lempel Ziv-Welsh Compression-image compression.

UNIT IV VOIP TECHNOLOGY

Basics of IP transport, VoIP challenges, H.323/ SIP –Network Architecture, Protocols, Call establishment and release, VoIP and SS7, Quality of Service- CODEC Methods- VOIP applicability.

UNIT V MULTIMEDIA NETWORKING

Multimedia networking -Applications-streamed stored and audio-making the best Effort service- protocols for real time interactive Applications-distributing multimedia-beyond best effort service-secluding and policing Mechanisms-integrated services-differentiated Services-RSVP.

TEXT BOOKS:

1. Fred Halshall “Multimedia Communication - Applications, Networks, Protocols and Standards”, Pearson Education, 2007.
2. Tay Vaughan, “Multimedia: Making it Work”, 7 th Edition, TMH 2008/98.

3. Kurose and W.Ross” Computer Networking “a Top down Approach, Pearson Education 2005.

3. R. Steimnetz, K. Nahrstedt, “Multimedia Computing, Communications and Applications”, Pearson Education Ranjan Parekh, “Principles of Multimedia”, TMH 2007.

COURSE OUTCOMES (COs)															
CO1	Explore the basic components of multimedia.														
CO2	Analyze audio and video compression techniques.														
CO3	Apply text and image compression techniques.														
CO4	Evaluate the basic concepts of Voice Over Internet Protocol.														
CO5	Understand the concepts of multimedia networking and its applications.														
CO6	Design interactive real time multimedia applications.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT046	AGILE METHODOLOGY	L	T	P	C
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Nil				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES • To provide students with theoretical as well as practical understanding of agile software • To develop practices and how small teams can apply them to create high-quality software.					

UNIT I AGILE METHODOLOGY

9

Theories for Agile Management – Agile Software Development – Traditional Model vs. Agile Model – Classification of Agile Methods – Agile Manifesto and Principles – Agile Project Management – Agile Team Interactions – Ethics in Agile Teams – Agility in Design-Testing

– Agile Documentations – Agile Drivers- Capabilities and Values

UNIT II AGILE PROCESSES

9

Lean Production – SCRUM, Crystal, Feature Driven Development- Adaptive Software Development–Extreme Programming: Method Overview–Lifecycle–Work Products–Roles and Practices.

UNIT III AGILITY AND KNOWLEDGE MANAGEMENT

9

Agile Information Systems – Agile Decision Making – Earl_S Schools of KM – Institutional Knowledge Evolution Cycle – Development, Acquisition, Refinement, Distribution, Deployment, Leveraging – KM in Software Engineering – Managing Software Knowledge – Challenges of Migrating to Agile Methodologies – Agile Knowledge Sharing – Role of Story-Cards – Story-Card Maturity Model(SMM).

UNIT IV AGILITY AND REQUIREMENTS ENGINEERING

9

Impact of Agile Processes in RE–Current Agile Practices – Variance – Overview of RE Using Agile – Managing Unstable Requirements – Requirements Elicitation – Agile Requirements Abstraction Model – Requirements Management in Agile Environment- Agile Requirements Prioritization – Agile Requirements Modeling and Generation – Concurrency in Agile Requirements Generation.

UNIT V AGILITY AND QUALITY ASSURANCE

9

Agile Product Development–Agile Metrics–Feature Driven Development(FDD)–Financial and Production Metrics in FDD – Agile Approach to Quality Assurance – Test Driven Development – Agile Approach in Global Software Development.

TEXT BOOKS:

1. David J. Anderson and Eli Schragenheim, —Agile Management for Software Engineering: Applying the Theory of Constraints for Business Results, Prentice Hall, 2003.
2. Hazza and Dubinsky, —Agile Software Engineering, Series: Undergraduate Topics in Computer Science, Springer, 2009.

REFERENCES:

2. Kevin C. Desouza, —Agile Information Systems: Conceptualization, Construction, and Management, Butterworth-Heinemann, 2007.

COURSE OUTCOMES (COs)	
CO1	Understand the fundamentals of agile methodology.
CO2	Explore the various agile processes for software development.
CO3	Demonstrate knowledge management in Agile methodology.
CO4	Describe the benefits and pitfalls of working in an Agile team and to understand Agile development, deployment and testing.
CO5	Apply agile approach to quality assurance.
CO6	Design applications using Agile approach in Global Software Development
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low	

COs\ POs	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03

Approval	49th meeting of the Academic Council														

U18PEIT051	INTERNET OF THINGS	L	T	P	C
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Computer Architecture				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES • To understand Smart Objects and IoT Architectures • To learn about various IOT-related protocols • To build simple IoT Systems using Arduino and RaspberryPi. • To understand data analytics and cloud in the context ofIoT					

UNIT I FUNDAMENTALS OF IoT

9

Evolution of Internet of Things - Enabling Technologies – IoT Architectures: oneM2M, IoT World Forum (IoTWF) and Alternative IoT models – Simplified IoT Architecture and Core IoT Functional Stack – Fog, Edge and Cloud in IoT – Functional blocks of an IoT ecosystem – Sensors, Actuators, Smart Objects and Connecting Smart Objects

UNIT II IoT PROTOCOLS

9

IoT Access Technologies: Physical and MAC layers, topology and Security of IEEE 802.15.4, 802.15.4g, 802.15.4e, 1901.2a, 802.11ah and LoRaWAN – Network Layer: IP versions, Constrained Nodes and Constrained Networks – Optimizing IP for IoT: From 6LoWPAN to 6Lo, Routing over Low Power and Lossy Networks – Application Transport Methods: Supervisory Control and Data Acquisition – Application Layer Protocols: CoAP and MQTT

UNIT III DESIGN AND DEVELOPMENT

9

Design Methodology - Embedded computing logic - Microcontroller, System on Chips - IoT system building blocks - Arduino-Board details, IDE programming - Raspberry Pi - Interfaces and Raspberry Pi with Python Programming.

UNIT IV DATA ANALYTICS AND SUPPORTING SERVICES

9

Structured Vs Unstructured Data and Data in Motion Vs Data in Rest – Role of Machine Learning – No SQL Databases – Hadoop Ecosystem – Apache Kafka, Apache Spark – Edge Streaming Analytics and Network Analytics – Xively Cloud for IoT, Python Web Application Framework – Django – AWS for IoT – System Management with NETCONF-YANG

UNIT V CASE STUDIES/INDUSTRIAL APPLICATIONS

9

Cisco IoT system - IBM Watson IoT platform – Manufacturing - Converged Plantwide

Ethernet Model (CPwE) – Power Utility Industry – GridBlocks Reference Model - Smart and ConnectedCities:Layeredarchitecture,SmartLighting,SmartParkingArchitectureandSmart TrafficControl

COURSE OUTCOMES (COs)															
CO1	Explain the concept of IoT.														
CO2	Analyze various protocols for IoT.														
CO3	Design a PoC of an IoT system using Raspberry Pi/Arduino														
CO4	Apply data analytics and use cloud offerings related to IoT.														
CO5	Analyze applications of IoT in real time scenario														
CO6	Implement Industrial IoT applications														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT052	ARTIFICIAL INTELLIGENT GAME	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Artificial Intelligence				

	Course Designed by:- Dept of Information Technology
OBJECTIVES • Study The Concepts Of Artificial Intelligence. • Learn The Methods Of Solving Problems Using Artificial Intelligence. • Introduce The Concepts Of Expert Systems And Machine Learning.	

UNIT I INTRODUCTION 9
 Introduction–Definition – Future of Artificial Intelligence – Characteristics of Intelligent Agents– Typical Intelligent Agents – Problem Solving Approach to Typical AI problems.

UNIT II PROBLEMSOLVING METHODS 9
 Problem solving Methods – Search Strategies- Uninformed – Informed – Heuristics – Local Search Algorithms and Optimization Problems – Searching with Partial Observations – Constraint Satisfaction Problems – Constraint Propagation – Backtracking Search – Game Playing – Optimal Decisions in Games – Alpha – Beta Pruning – Stochastic Games

UNIT III KNOWLEDGE REPRESENTATION 9
 First Order Predicate Logic – Prolog Programming – Unification – Forward Chaining- Backward Chaining – Resolution – Knowledge Representation – Ontological Engineering- Categories and Objects–Events–Mental Events and Mental Objects–Reasoning Systems for Categories – Reasoning with Default Information

UNIT IV SOFTWARE AGENTS 9
 Architecture for Intelligent Agents – Agent communication – Negotiation and Bargaining – Argumentation among Agents – Trust and Reputation in Multi-agent systems

UNIT V APPLICATIONS 9
 AI Applications–Language Models–Information Retrieval–Information Extraction–Natural Language Processing – Machine Translation – Speech Recognition – Robot – Hardware – Perception – Planning –Moving

COURSE OUTCOMES (COs)	
CO1	Identify problems that are amenable to solution by Artificial Intelligence methods.
CO2	Select appropriate Artificial Intelligence methods to solve a given problem.

CO3	Formalize agiven problem in the language/framework of different Artificial Intelligence methods.														
CO4	Represent knowledge, design intelligent agents and apply the suitable Artificial Intelligence algorithms for problem solving and reasoning.														
CO5	Designandcarryoutanempiricalevaluationofdifferent Artificial Intelligence algorithms														
CO6	Learn the concepts of problem solving, reasoning, planning, natural language understanding, computer vision and machine learning and design real time Artificial Intelligence applications														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT053	INFERENTIAL STATISTICS	L	T	P	C
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Data mining				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES To enable students to analyze and interpret data, collected data from a variety of types of research designs, within a linear model framework.					

UNIT1 INTERVAL ESTIMATION 10
 Concepts of confidence interval and confidence coefficient - confidence interval for mean - difference between means - variance and ratio of variances under normality. Large sample confidence interval for proportions and correlation coefficients

UNITII TESTING OF HYPOTHESIS 9
 Definition of Most Powerful (MP) - Uniformly Most Powerful (UMP) - Neyman Pearson Lemma - Monotone Likelihood Ratio Property - Statement of the theorem - UMP tests for testing one sided hypothesis for distribution with MLR property.

UNITIII LIKELIHOOD RATIO TEST 9
 Likelihood Ratio test- LRT for single mean for normal case (large and small samples)- for equality of two means for unknown but equal variances. LRT for single variance and equality of two variances

UNITIV NON PARAMETRIC TESTS**9**

Need for non parametric tests- Sign test for one sample and two samples- Wilcoxon signed rank test- Median test- Wald Wolfowitz run test- Mann Whitney U test- Run test for randomness-test for independence based on Spearman's rank correlation coefficient (small and large samples)- Chi square test- goodness of fit- independence of attributes in contingency table - and equality of many proportions. Kruskal Wallis Test for equality of several means.

UNITV SEQUENTIAL PROBABILITY RATIO TEST**8**

Need for sequential test- Wald's SPRT- Sequential test for the mean of Normal population when variance is known and for the proportion- Derivation of expressions for OC and ASN functions in Bernoulli and Normal distributions.

COURSE OUTCOMES (COs)															
CO1	Understand the analysis of Variance (ANOVA) or Analysis of Covariance (ANCOVA)														
CO2	Analyze and interpret data collected from factorial designs.														
CO3	Use the multiple linear regression (MLR) procedures to compute partial and semi-partial correlation analyses and interpret the results														
CO4	Infer data from a prediction study using one criterion variable and multiple predictor variables.														
CO5	Interpret ANOVA, ANCOVA, and MLR results reported in published reports of research.														
CO6	Evaluate the reliability and validity of a measuring (or survey) instrument.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT054	DEEP LEARNING	L	T	P	C
	Total Contact Hours - 45	3	0	0	3
	Prerequisite – Neural networks				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES This course covers the basics of machine learning, neural networks and deep learning. Model for deep learning technique and the various optimization and generalization mechanisms are included. Major topics in deep learning and dimensionality reduction techniques are covered.					

UNIT I INTRODUCTION 9

Introduction to machine learning- Linear models (SVMs and Perceptrons, logistic regression)- Intro to Neural Nets: What a shallow network computes- Training a network: loss functions, back propagation and stochastic gradient descent- Neural networks as universal function approximates

UNIT II DEEP NETWORKS 9

History of Deep Learning- A Probabilistic Theory of Deep Learning- Backpropagation and regularization, batch normalization- VC Dimension and Neural Nets- Deep Vs Shallow Networks Convolutional Networks- Generative Adversarial Networks (GAN), Semi-supervised Learning

UNIT III DIMENSIONALITY REDUCTION 9

Linear (PCA, LDA) and manifolds, metric learning - Auto encoders and dimensionality reduction in networks - Introduction to Convnet - Architectures – AlexNet, VGG, Inception, ResNet - Training a Convnet: weights initialization, batch normalization, hyperparameter optimization

UNIT IV OPTIMIZATION AND GENERALIZATION 9

Optimization in deep learning– Non-convex optimization for deep networks- Stochastic Optimization Generalization in neural networks- Spatial Transformer Networks- Recurrent networks, LSTM - Recurrent Neural Network Language Models- Word-Level RNNs & Deep Reinforcement Learning - Computational & Artificial Neuroscience

UNIT V CASE STUDY AND APPLICATIONS 9

Imagenet- Detection-Audio WaveNet-Natural Language Processing Word2Vec - Joint Detection Bio Informatics-Face Recognition-Scene Understanding-Gathering Image Captions

COURSE OUTCOMES (COs)	
CO1	Explain the mathematical, statistical and computational challenges of building neural networks
CO2	Understand the concepts of Machine Learning
CO3	Explore the concepts of deep learning

CO4	Apply dimensionality reduction techniques in deep learning applications														
CO5	Describe the optimization and generalization for deep networks														
CO6	Design real time applications using deep learning techniques														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT055	SOFTWARE QUALITY	L	T	P	C
	Total Contact Periods - 45	3	0	0	3
	Prerequisite – Software Engineering				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES • To develop a broad understanding of SQA processes from planning until execution • To have detailed knowledge of techniques in an appropriate engineering and management context.					

UNIT I 9

Introduction to software quality – Software modeling – Scope of the software quality program – Establishing quality goals – Purpose, quality of goals – SQA planning software – Productivity and documentation.

UNIT II 9

Software quality assurance plan – Purpose and Scope, Software quality assurance Management – Organization – Quality tasks – Responsibilities – Documentation.

UNIT III 9

Standards, Practices, Conventions and Metrics, Reviews and Audits – Management – Technical review – Software inspection process – Walkthrough process – Audit process – Test processes – ISO, cmm compatibility – Problem reporting and corrective action.

UNIT IV 9

Tools, Techniques and methodologies, Code control, Media control - Supplier control - Records collection - Maintenance and retention - Training and risk management.

UNIT V 9

ISO 9000 model - CMM model - Comparisons - ISO 9000 weaknesses - CMM weaknesses -

SPICE – Software process improvement and capability determination.

TEXT BOOK

1. Mordechai Ben – Meachem and Garry S.Marliss, “Software Quality – Producing Practical, Consistent Software”, International Thompson Computer Press, 1997.

REFERENCES

1. Watt. S. Humphrey, “Managing Software Process”, Addison – Wesley, 1998.
2. Philip.B.Crosby, “Quality is Free: The Art of making quality certain”, Mass Market, 1992.

COURSE OUTCOMES (COs)															
CO1	Understand the quality management processes														
CO2	Describe the various activities of quality assurance, quality planning and quality control														
CO3	Define the importance of standards in the quality														
CO4	Discuss the needs for software processassessment and improvement														
CO5	Explore the different software quality factors models														
CO6	Apply tools, techniques and methodologies to ensure software quality

U18PEIT056	SOFTWARE ARCHITECTURE	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite –Nil				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES • To develop Computer Science, Software Engineering or Computer Engineering student • To understand the emerging field of software architecture means to the field of software development.					

UNIT I

Introduction – Software Architecture – Engineering Discipline for Software – Status of

Software Architecture Architectural Styles – Pipes and Filters – Data Abstraction and Object Oriented Organization – Event Based Implicit Invocation – Layered Systems – Repositories – Interpreters – Process Control – Other Architectures – Hetero Generous Architecture – Case Studies.

UNITII

9

Shared Information Systems – Database Integration – Integration in Software Development Environments – Integration in the Design of Build – Architectural Structures for Shared Information Systems – Conclusions.

UNITIII

9

Architectural Design Guidance – Guidance for User-Interface Architectures – The Quantified Design Phase.

UNITIV

9

Formal Model and Specification – The Value of Architectural Formalism – Formalizing the Architecture of a Specific System – Formalizing an Architectural Style – Formalizing and Architectural Design Space – Theory of Software Architecture – Notation Linguistic Issues – Requirement for Architecture – Description Languages – First Class Connectors – Adding Implicit Invocation to Traditional Programming Languages.

UNITV

9

Tools for Architectural Design – Unicon – Exploiting Style in Architectural Design Environments – Beyond Definition / Use.

TEXT BOOK

1. Mary Shaw and David Garlan , “Software Architecture : Perspectives on an Emerging Discipline” ,Prentice – Hall of India, New Delhi, 2000.

COURSE OUTCOMES (Cos)															
CO1	Understand the Software Architectural perspective and how it differs from lower-level design.														
CO2	Describe the integration in Software Development process.														
CO3	Apply the architectural structures for shared information systems.														
CO4	Develop architectural approaches from basic requirements.														
CO5	Define the architectural frameworks within product line development.														
CO6	Apply tools for software architectural designs.														
Mapping of Course Outcomes with Program outcomes (Pos) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
Cos\ Pos	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03

U18PEIT061	QUANTUM COMPUTING	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite –Nil				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES	Students will be well versed in Quantum computation and algorithms, Basic quantum mechanics, quantum cryptographic protocols, quantum teleportation, polynomial-time factoring, quantum error correction, and a new graphical calculus for reasoning about quantum systems				

UNIT I FOUNDATION 9

Overview of traditional computing – Church-Turing thesis – circuit model of computation – reversible computation – quantum physics – quantum physics and computation – Dirac notation and Hilbert Spaces – dual vectors – operators – the spectral theorem – functions of operators – tensor products – Schmidt decomposition theorem.

UNIT II QUBITS AND QUANTUM MODEL OF COMPUTATION 9

State of a quantum system – time evolution of a closed system – composite systems – measurement – mixed states and general quantum operations – quantum circuit model – quantum gates – universal sets of quantum gates – unitary transformations – quantum circuits.

UNIT III QUANTUM ALGORITHMS– I 9

Superdense coding – quantum teleportation – applications of teleportation – probabilistic versus quantum algorithms – phase kick-back – the Deutsch algorithm – the Deutsch-Jozsa algorithm – Simon's algorithm – Quantum phase estimation and quantum Fourier Transform.

UNIT IV QUANTUM ALGORITHMS– II 9

Order-finding problem – eigen value estimation approach to order finding – Shor's algorithm for order finding – finding discrete logarithms – hidden subgroups – Grover's quantum search algorithm – amplitude amplification – quantum amplitude estimation – quantum counting – searching without knowing the success probability.

UNIT V QUANTUM COMPUTATIONAL COMPLEXITY AND ERROR CORRECTION 9

Computational complexity – black-box model – lower bounds for searching – general black-box lower bounds – polynomial method – block sensitivity – adversary methods – classical error correction – classical three-bit code – fault tolerance – quantum error correction – three- and nine-qubit quantum codes – fault-tolerant quantum computation.

COURSE OUTCOMES (COs)															
CO1	Translate fluently between the major mathematical representations.														
CO2	Implement basic quantum algorithms.														
CO3	Understand quantum decoherence in systems for computation.														
CO4	Apply eigenvalue estimation approach to order finding.														
CO5	Describe the quantum error correction techniques.														
CO6	Designing fault tolerant quantum computing systems														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT062	REAL TIME SYSTEMS	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Database Management System				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES	The main objective of this course is to cover the principles and design methods of real-time computer systems. It covers the interfacing techniques and microprocessor system realization. The principles of real-time operating systems and real-time software system				

UNIT I INTRODUCTION 9
 Issues in Real Time Computing, Structure of a Real Time System. Task Classes, Performance Measures for Real Time Systems, Estimating Program Run times. Task Assignment and Scheduling –Classical Uniprocessor scheduling algorithms, UniProcessor. Scheduling of IRIS Tasks, Task Assignment, Mode Changes, and Fault Tolerant Scheduling.

UNIT II PROGRAMMING LANGUAGES AND TOOLS 9
 Programming Language and Tools – Desired Language characteristics, Data Typing, Control structures, Facilitating Hierarchical Decomposition, Packages, Runtime (Exception) Error handling, Overloading and Generics, Multitasking, Low Level programming, Task scheduling, Timing Specifications, Programming Environments, Run-time Support.

UNIT III REAL TIME DATABASES 9
 135

Basic Definition, Real time Vs General Purpose Databases, Main Memory Databases, Transaction priorities, Transaction Aborts, Concurrency Control Issues, Disk Scheduling Algorithms, Twophase Approach to improve Predictability, Maintaining Serialization Consistency, Data bases for Hard Real Time systems.

UNITIV COMMUNICATION

9

Real-Time Communication – Communications Media, Network Topologies Protocols, Fault Tolerant Routing. Fault Tolerance Techniques – Fault Types, Fault Detection. Fault Error containment Redundancy, Data Diversity, Reversal Checks, Integrated Failure handling.

UNITV EVALUATIONTECHNIQUES

9

Reliability Evaluation Techniques – Obtaining Parameter Values, Reliability Models for Hardware Redundancy, Software Error models. Clock Synchronization – Clock, A Nonfault-Tolerant Synchronization Algorithm, Impact of Faults, Fault Tolerant Synchronization in Hardware, Fault Tolerant Synchronization in Software

COURSE OUTCOMES (Cos)															
CO1	Understand the basics concepts of real-time systems.														
CO2	Generate a high-level analysis document based on requirements specifications.														
CO3	Describe the basic multi-task scheduling algorithms for periodic, aperiodic.														
CO4	Apply fault tolerant routing for the real time communication and communications media.														
CO5	Implement reliability evaluation techniques to identify software error models.														
CO6	Design real time systems by interacting with the environment.

U18PEIT063	COMPUTER GRAPHICS	L	T	P	C
	Total Contact Hours: 45	3	0	0	3
	Prerequisite: Computer Architecture				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES					
• Be familiar with both the theoretical and practical aspects of computing with images. • Have described the foundation of image formation, measurement, and analysis. • Understand the geometric relationships between 2D images and the 3D world.					

UNIT I INTRODUCTION 9

Survey of computer graphics, Overview of graphics systems – Video display devices, Raster scan systems, Random scan systems, Graphics monitors and Workstations, Input devices, Hard copy Devices, Graphics Software; Output primitives – points and lines, line drawing algorithms, loading the frame buffer, line function; circle and ellipse generating algorithms; Pixel addressing and object geometry, filled area primitives.

UNIT II TWO DIMENSIONAL GRAPHICS 9

Two dimensional geometric transformations – Matrix representations and homogeneous coordinates, composite transformations; Two dimensional viewing – viewing pipeline, viewing coordinate reference frame; window-to-viewport coordinate transformation, Two dimensional viewing functions; clipping operations – point, line, and polygon clipping algorithms.

UNIT III THREE DIMENSIONAL GRAPHICS 9

Three dimensional concepts; Three dimensional object representations – Polygon surfaces- Polygon tables- Plane equations – Polygon meshes; Curved Lines and surfaces, Quadratic surfaces; Blobby objects; Spline representations – Bezier curves and surfaces – B-Spline curves and surfaces.

TRANSFORMATION AND VIEWING: Three dimensional geometric and modeling transformations – Translation, Rotation, Scaling, composite transformations; Three dimensional viewing – viewing pipeline, viewing coordinates, Projections, Clipping; Visible surface detection methods.

UNIT IV ILLUMINATION AND COLOUR MODELS 9

Light sources – basic illumination models – halftone patterns and dithering techniques; Properties of light – Standard primaries and chromaticity diagram; Intuitive colour concepts – RGB colour model – YIQ colour model – CMY colour model – HSV colour model – HLS colour model; Colour selection.

UNIT V ANIMATIONS & REALISM ANIMATION GRAPHICS 9

Design of Animation sequences – animation function – raster animation – key frame systems – motion specification – morphing – tweening. **COMPUTER GRAPHICS REALISM:** Tiling the plane – Recursively defined curves – Koch curves – C curves – Dragons – space filling curves – fractals – Grammar based models – fractals – turtle graphics – raytracing.

COURSE OUTCOMES (Cos)															
CO1	Equip with the practical skills necessary to build computer vision applications.														
CO2	Describe the object, scene recognition and categorization from images.														
CO3	Describe basic methods of computer vision related to multi-scale representation, edge detection and detection of other primitives, stereo, motion and object recognition.														
CO4	Explore the different illumination and color models.														
CO5	Implement motion related techniques.														
CO6	Develop applications using computer vision techniques.														
Mapping of Course Outcomes with Program outcomes (Pos) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low

U18PEIT064	BUSINESSINTELLIGENCE	L	T	P	C
-------------------	-----------------------------	----------	----------	----------	----------

Total Contact Hours: 45	3	0	0	3
Prerequisite: Database Management System				
Course Designed by:- Dept of Information Technology				
OBJECTIVE The objective of this course is to explore business intelligence and data mining, using powerful yet user friendly tools, with exposure to real world business applications.				

UNIT I BUSINESS INTELLIGENCE 9
Effective And Timely Decisions – Data, Information And Knowledge – Role Of Mathematical Models – Business Intelligence Architectures: Cycle of A Business Intelligence Analysis – Enabling Factors In Business Intelligence Projects – Development of a Business Intelligence System – Ethics And Business Intelligence.

UNIT II KNOWLEDGE DELIVERY 9
The Business Intelligence User Types, Standard Reports, Interactive Analysis and Ad Hoc Querying, Parameterized Reports And Self-Service Reporting, Dimensional Analysis, Alerts/Notifications, Visualization: Charts, Graphs, Widgets, Scorecards And Dashboards, Geographic Visualization, Integrated Analytics, Considerations: Optimizing The Presentation For The Right Message.

UNIT III EFFICIENCY 9
Efficiency Measures – The CCR Model: Definition Of Target Objectives- Peer Groups – Identification Of Good Operating Practices; Cross Efficiency Analysis – Virtual Inputs And Outputs – Other Models. Pattern Matching – Cluster Analysis, Outlier Analysis.

UNIT IV BUSINESS INTELLIGENCE APPLICATIONS 9
Marketing Models – Logistic And Production Models – Case Studies.

UNIT V FUTURE OF BUSINESS INTELLIGENCE 9
Future of Business Intelligence – Emerging Technologies, Machine Learning, Predicting The Future, BI Search & Text Analytics – Advanced Visualization – Rich Report, Future Beyond Technology.

TEXT BOOK:

5. Ralph Kimball, Margy Ross, Warren Thornthwaite, Joy Mundy, Bob Becker, “The Data Warehouse Lifecycle Toolkit”, Wiley Publication Inc., 2007.

COURSE OUTCOMES (COs)	
CO1	Understand the basics Business Intelligence.

CO2	Learn Standard Reports, Interactive Analysis and Ad Hoc Querying.														
CO3	Understand Efficiency Measures and CCR Model.														
CO4	Understand business Intelligence applications.														
CO5	Design Business Intelligence Applications for real time cases.														
CO6	Predict the future of Business Intelligence and explore the emerging technologies														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low															
COs\ POs	1	2	3	4	5	6	7	8	9	10	11	12	PS 01	PS 02	PS 03
CO1	3	3		2	3	3						1	2

CO6	3	2		2	2	2	2			2	2	3	2		
Category	Professional Electives(PE)														
Approval	49th meeting of the Academic Council														

U18PEIT065	INFORMATION THEORY AND CODING	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Multimedia Systems				
	Course Designed by:- Dept of Information Technology				
OBJECTIVES	- Understand Error–ControlCoding. - Understand encoding and decoding of digital datastreams. - Be Familiar with the methods for the generation of these codes and their decodingtechniques. - Be aware of compression and decompressiontechniques. - Learn the Concepts of MultimediaCommunication.				

UNIT I INFORMATION ENTROPY FUNDAMENTALS 9
 Uncertainty, Information And Entropy – Source Coding Theorem – Huffman Coding – Shannon Fano Coding – Discrete Memory Less Channels – Channel Capacity – Channel Coding Theorem – Channel Capacity Theorem.

UNIT II DATA AND VOICE CODING 9
 Differential Pulse Code Modulation–Adaptive Differential Pulse Code Modulation–Adaptive Subband Coding–Delta Modulation–Adaptive Delta Modulation–Coding Of Speech Signal At Low Bit Rates (Vocoders, LPC).

UNIT III ERROR CONTROL CODING 9
 Linear Block Codes–Syndrome Decoding–Minimum Distance Consideration–Cyclic Codes – Generator Polynomial–Parity Check Polynomial–Encoder For Cyclic Codes–Calculation Of Syndrome – Convolutional Codes.

9

UNITY AUDIO AND VIDEOCODING

U18PEIT066	MULTI AGENT INTELLIGENT SYSTEMS	L	T	P	C
	Total Contact Periods – 45	3	0	0	3
	Prerequisite – Artificial Intelligence				

	Course Designed by:- Dept of Information Technology
OBJECTIVES	The purpose of this course is to impart concepts of Artificial Intelligence and different agents.

UNIT I INTRODUCTION 9

Definitions - Foundations - History - Intelligent Agents-Problem Solving-Searching - Heuristics -Constraint Satisfaction Problems - Game playing.

UNIT II KNOWLEDGE REPRESENTATION AND REASONING 9

Logical Agents-First order logic-First Order Inference-Unification-Chaining- Resolution Strategies Knowledge Representation-Objects-Actions-Events.

UNIT III PLANNING AGENTS 9

Planning Problem-State Space Search-Partial Order Planning-Graphs-Nondeterministic Domains Conditional Planning-Continuous Planning-Multi Agent Planning.

UNIT IV AGENTS AND UNCERTAINTY 9

Acting under uncertainty – Probability Notation-Bayes Rule and use - Bayesian Networks- Other Approaches-Time and Uncertainty-Temporal Models- Utility Theory - Decision Network – Complex Decisions.

UNIT V HIGHER LEVEL AGENTS 9

Knowledge in Learning-Relevance Information-Statistical Learning Methods-Reinforcement Learning Communication-Formal Grammar-Augmented Grammars- Future of AI.

TEXTBOOKS:

1. Stuart Russell and Peter Norvig, “Artificial Intelligence - A Modern Approach”, 2nd Edition, Prentice Hall, 2002.
2. Michael Wooldridge, “An Introduction to Multi Agent System”, John Wiley, 2002.

REFERENCE BOOKS:

1. Patrick Henry Winston, Artificial Intelligence, 3rd Edition, AW,1999.
2. Nils.J.Nilsson, Principles of Artificial Intelligence, Narosa Publishing House,1992.

COURSE OUTCOMES (COs)															
CO1	Describe the modern view of AI as the study of agents that receive percepts from the Environment and perform actions.														
CO2	Demonstrate awareness of informed search and exploration Methods.														
CO3	Explain about AI techniques for knowledge representation and planning.														
CO4	Apply probabilistic/statistical approaches to act in uncertain environment.														
CO5	Understand the different learning approaches and make the machine to perform human-like tasks.														
CO6	Prepare for future by integrating Artificial Intelligence in real time.														
Mapping of Course Outcomes with Program outcomes (POs) (1/2/3 indicates strength of correlation) 3-High, 2-Medium, 1-Low
